The IBM® Maximo® for Instrument Calibration Manager release notes explain how to install Instrument Calibration Manager Patch 1. Use this document to ensure proper installation of this Industry Solution into your Maximo 6 installation. Read all of this guide before you install Calibration Manager Release 3 Patch 1. This document includes important information about steps that you must complete before and after you install this Industry Solution patch.

This document also provides information about other IBM Corporation resources available to you, including a list of documentation and a link to support information for this product.

Audience

This guide is for the system administrator, network administrator, or other professional who deploys or will use Patch 1 for Calibration Manager Release 3.

**Support**

IBM Corporation users with a valid Annual Customer Support Plan (ACSP) can obtain product support online at Support Online: support.mro.com.

Support Online includes information about product releases, software patches, and documentation updates. To find the most current version of a document, refer to the Knowledge Base on this site.
Instrument Calibration
Manager Release Notes

About This Release

This release updates the 6.3 release of Calibration Manager to be compatible with IBM Maximo Release 6.2.1. Previous releases of Calibration Manager are not compatible with IBM Maximo Release 6.2.1. If you have updated IBM Maximo to Release 6.2.1, install this update for Calibration Manager.

Implementing This Release

Anyone planning to apply Calibration Manager Release 3 Patch 1 should read this guide. To apply this patch, you need system administrator rights and privileges. This guide includes important information about the steps you must complete both before and after you apply the patch.

Update Process

Applying Calibration Manager Release 3 Patch 1 is a four-part process:

1. Installing the patch
2. Running the database scripts
3. Building the EAR files
4. Restarting the Application server and deploying the EAR files

Pre-installation Requirements

Before you install this patch, check that you have met the following pre-installation requirements:

- The following software is installed on your system:
  - Maximo 6.2.1
  - Calibration Manager Release 3
Implementing This Release

- All users have logged off Maximo.
- All Maximo Application servers and services are stopped.
- No other programs are open.
- You have backed up both your entire <maximo> folder and your database.

Installing the Patch

To install this patch, complete the following steps:

1. Run update.exe from the <maximo>/PowerUpdateClientCalibration directory of your application server.

2. Click Next to check for updates. If an update is available, the update program displays the Update Available page.

Note: If your software is current, the update program displays a message that your software is already up to date. To close the update program, click Exit.

3. Click Next to retrieve the updates. As the update program retrieves the updated files, it displays a status dialog box. After the update program downloads the patch, it displays the Updater Retrieved dialog box.

4. Click Next to run the updater.

5. Accept the default value or choose a new Maximo home directory when the update program displays the Choose Install Folder dialog box.

6. Click Install to install the update.

7. Click Done to complete the patch installation process.

Running the Database Scripts

The database scripts create and update the database tables necessary for this patch.

Note: If you run Maximo on Oracle® Database 10g, you must have the create job privilege before you run the updatedb.bat script.

To grant the create job privilege, log on to SQL *Plus under the system account and run the following command:

```
grant create job to <dbuser>;
```

Example:

```
grant create job to maximo;
```

To run the database scripts, complete the following steps:

1. Back up your database, if you have not already done so.

2. Run the updatedb.bat script from the <maximo>/ tools/maximo directory.
Building the EAR Files

Rebuild your maximo.ear, and maximohelp.ear files. Be sure that your maximo.properties file is up to date before you build the EAR files. For more information about building EAR files, refer to your IBM Maximo Installation Guide.

Restarting the Application Server and Deploying the EAR Files

You must restart the Maximo application server and redeploy your EAR files in order to make the Calibration Manager Release 3 Patch 1 changes available to users. For information about deploying EAR files, refer to your IBM Maximo Installation Guide.
