Base Component Reference
Fifth Edition (December 2006)

This edition of the IBM Tivoli System Automation for Multiplatforms Base Component Reference applies to IBM Tivoli System Automation for Multiplatforms Version 2, Release 2, Modification 0, Fix 1 (program number 5724-M00), and to all subsequent releases of this product until otherwise indicated in new editions.

IBM welcomes your comments. A form for readers’ comments may be provided at the back of this publication, or you may address your comments to the following address:

About this book

This book contains the reference information like commands and messages of the IBM Tivoli System Automation for Multiplatforms base component running on System x, System z, System i, System p, and AIX.

Who should use this book

This book is intended for system administrators who want to look up command and message information of the base component of IBM Tivoli System Automation for Multiplatforms.

The automation and failover capabilities of the base component are described in the manual IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide SC33-8272.

How to use this book

This book is divided into the following chapters:

- Chapter 1, “IBM Tivoli System Automation commands,” on page 1 describes how to use the IBM Tivoli System Automation commands.
- Chapter 3, “Messages generated by IBM Tivoli System Automation,” on page 127 lists the messages that are generated by the base component, the sampolicy command, the base component end-to-end automation adapter, and the HACMP adapter.

What's new in release 2.2

New commands

In release 2.2, a number of commands are introduced that provide improvements in usability and reliability for the base component of IBM Tivoli System Automation for Multiplatforms:

samsimul command

Simulates a series of requests against or state changes of individual automated resources and displays the expected consequences. The automation engine simulates all actions that are triggered by the requests or state changes rather than performing them. Developers of system automation policies can use the samsimul command to test the results that the activation of a policy would have in arbitrary variations before actually activating it.

Issam command

Lists resource groups, nested groups, and contained members together with their operational state in a tree format. This allows operators to quickly get a clear overview of all currently defined resources and their states.

prereqSAM command

Checks whether all prerequisites for installing the base component are met. It is invoked implicitly by the installSAM command, but can also be invoked separately by a user prior to starting the
installation. **prereqSAM** reports if any prerequisites are missing or not at the required minimum level.

### Where to find more information

In addition to this manual, the IBM Tivoli System Automation for Multiplatforms library comprises the following books:

- **IBM Tivoli System Automation for Multiplatforms Installation and Configuration Guide** SC33-8273
- **IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide** SC33-8272
- **IBM Tivoli System Automation for Multiplatforms End-to-End Automation Management Component Administrator’s and User’s Guide** SC33-8275
- **IBM Tivoli System Automation for Multiplatforms End-to-End Automation Management Component Reference** SC33-8276

You can download the complete documentation at

http://publib.boulder.ibm.com/tividd/tividd/IBMSystemAutomationforMultiplatforms2.2.html

The IBM Tivoli System Automation home page offers up-to-date information and services, and other items of interest to IBM Tivoli System Automation users.

You find the IBM Tivoli System Automation home page at

Conventions

The following highlighting conventions are used in this book:

<table>
<thead>
<tr>
<th><strong>Bold</strong></th>
<th>Identifies commands, subroutines, keywords, files, structures, directories, and other items whose names are predefined by the system. Also identifies graphical objects such as buttons, labels, and icons that the user selects.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Italic</strong></td>
<td>Identifies parameters whose actual names or values are to be supplied by the user.</td>
</tr>
<tr>
<td>monospace</td>
<td>Identifies examples of specific data values, examples of text similar to what you might see displayed, examples of portions of program code similar to what you might write as a programmer, messages from the system, or information you should actually type.</td>
</tr>
</tbody>
</table>

ISO 9000

ISO 9000 registered quality systems were used in the development and manufacturing of this product.

Related information

<tr>
<td>stopsrce</td>
<td>Stops an individual subsystem</td>
</tr>
</tbody>
</table>

### Setting the environment variables

**CT_CONTACT**

When the `CT_CONTACT` environment variable is set to a host name or IP address, the command contacts the Resource Monitoring and Control (RMC) daemon on the specified host. If the environment variable is not set, the command contacts the RMC daemon on the local system where the
command is being run. The resource class or resources that are displayed or modified by the command are located on the system to which the connection is established.

**CT_LOCAL_SCOPE**
The CT_LOCAL_SCOPE environment variable sets the RMC subsystem scope to the stand-alone environment. By default, the RMC subsystem monitors and controls the resources and resource classes on all nodes in the cluster. A cluster can consist of one or more nodes. When a cluster consists of one node, it is said to operate in a stand-alone environment. The scope of a command in the stand-alone environment is the local node. The scope of a command in a cluster environment of more than one node is the entire cluster. For a cluster of more than one node, to return or change resources or resource classes only on the node where RMC is running, set the CT_LOCAL_SCOPE environment variable to 1, as follows:

```bash
export CT_LOCAL_SCOPE=1
```

For example, assume that a cluster consists of nodes A, B, and C and the following command is run:

```bash
lsrsrc IBM.FileSystem
```

Resources for the file systems associated with nodes A, B, and C are returned.

If CT_LOCAL_SCOPE is set to 1 and the `addrgmbr` command is run on Node A, then only the file system resources associated with node A are returned.

**CT_MANAGEMENT_SCOPE**
The CT_MANAGEMENT_SCOPE environment variable must be set on all nodes for all users of IBM Tivoli System Automation. Enter `CT_MANAGEMENT_SCOPE=2` (peer domain scope). The variable may be permanently set in the profile.
addrgmbr

Name

`addrgmbr` - Adds one or more resources to a resource group

Synopsis

```
addrgmbr [-h] [ -f data_input_file] [-T] [-V]
```

```
addrgmbr [-h] [ -s [-m T | F] [-p A | O] [-T] [-V] -g Resource_group
Resource_class: "selection_string"
[Resource_class: "selection_string" [ ... ]]
```

```
addrgmbr [-h] [-s [-m T | F] [-p A | O] [-T] [-V] -g Resource_group
Resource_class: Resource_name[:Node], Resource_name[:Node], ...
[Resource_class: Resource_name[:Node], Resource_name[:Node], ...]
```

Description

The `addrgmbr` command adds one or more new resources to a resource group. If a `data_input_file` and the `-f` option is not specified, then either a selection string or a resource name must be specified when this command is used. A resource name or selection string must be specified with the resource class to which it belongs. A fixed resource must include the resource class and the node name at which it resides. A member resource cannot be included in more than one resource group at the same time. A member resource cannot be in a resource group and in an equivalency at the same time. Each member of the resource group must exist as an RMC resource before being added to a resource group. A resource group member can only be defined on an online node in a cluster.

You can only add multiple resources to a resource group if they are offline and if the nominal state of the resource group is offline. If the OpState of a resource to be added is online, the addition of that resource would cause an immediate stop of that resource. If the resource is in the process of stopping, then the addition of another resource would be rejected.

Member resources and their attribute flags can be specified on the command line as the syntax indicates or from a file when used with the `-f` option. The value must be the same data type that is defined for this resource attribute. Use the `lssrcdef` command to verify the data type and attribute field for each attribute.

Options

```
-f data_input_file
    Name of the file which contains member resource attribute information.
```

```
-g Resource_group
    The unique name of the resource group, to which the member resources
    are to be added. This represents the MemberOf attribute of the Managed
    Resource.
```

```
-h
    Help. Writes the command’s usage statement to standard output.
```

```
-m T | F
    Mandatory Attribute. Specifies whether this managed resource is required
    in the resource group.
    T    TRUE (the Default). These managed resources are required
         by the resource group.
```
addrgmbr

F FALSE. These managed resources are not required by the resource group.

-p A|O
   Specifies the method to be used when selecting a node for placing the resource on. The value can be:
   A Any.
   O Ordered. This is the default.

-s
   Specifies that a selection string will be used instead of the resource name.

-T
   Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V
   Writes the command’s verbose messages to standard output.

Parameters

Resource_class:”selection_string"
   Specifies the selection string. The -s option determines this parameter. Each selection string must be preceded by a resource class. The specified selection string is applied to its corresponding Resource_class attributes to determine which resources are to be made members of the Resource_group. The selection_string and its resource class must be separated by the colon or ":" delimiter.

   The selection string must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

   -s IBM.Application:'Name == "testing"'
   -s IBM.Application:'Name != "test"'
   -s IBM.Application:'Name like "%"' { For all resources}

   For information on how to specify selection strings, see “Using expressions” on page 93.

Resource_class:Resource_name[:Node]
   Member Resources. This specifies one or more member resources that are to be acted on. Resources belonging to different resource classes can also be specified using this syntax. However, member resources belonging to different classes must be separated by spaces. A member resource is identified by the resource’s class (Resource_class), the resource’s name (Resource_name), and optionally the node (Node) the resource is on. The Resource_class, Resource and Node must be separated by a colon.

   Resource_class is the name of the resource class the member resource belongs to. Resource is the name of the actual member resource in its class. The node may have to be included when trying to act on a fixed member resource. The node and its resource must be separated by the colon or ":" delimiter. Multiple resources belonging to the same resource class can also be specified and are separated by a comma:

   Resource_class:Resource[:Node][,Resource[:Node][...]]

   The member resources must exist in the resource group for the requested action to take place.

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
addrgmbr

2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide] section "Setting up non-root security.

Examples
1. To create member resources using the data input file, do the following:
   a. To generate a template to aid in the defining of these resources in a file, enter the command:
      lsrsrcdef -i IBM.ManagedResources >/tmp/MgdR.rdef
   b. Edit the file /tmp/MgdR.rdef with your preferred file editor: (Enter values for all of the attributes, substituting an appropriate value for the type, or leave it blank if you want the default value.)
   c. Run the addrgmbr command with the file as follows:
      addrgmbr -f /tmp/MgdR.rdef
   **Sample Data Input file for addrgmbr:**
      You can enter values for all of the attributes and thus change the value shown below, or remove the line with the attribute if you want the default value.

      **PersistentResourceAttributes:**
      resource 1:
      ManagedResource = "0x001b 0xffff 0x35c05b13 0x9a6ee5e0 0x0de934c"
      MemberOf = "charmC"

      resource 2:
      ManagedResource = IBM.Application:Res1:node1
      MemberOf = "charmC"
      Mandatory = false

2. To add a member resource **tester** belonging to resource class IBM.Application, to a resource group **foo**, enter:
   addrgmbr -g foo IBM.Application:tester
3. To add member resources **tester**, **Jfoo**, and **Dfoo**, belonging to resource class IBM.Application, to a resource group **foo**, enter:
   addrgmbr -g foo IBM.Application:tester,Jfoo,Dfoo
4. To add member resources **tester** and **Jfoo** belonging to resource class IBM.Application, and fixed resource **en0** of class IBM.ServiceIP, residing at node number 1, to a resource group **foo**, enter:
   addrgmbr -g foo IBM.Application:tester,Jfoo IBM.ServiceIP:en0:1
5. To add selected member resources of the resource class IBM.Application, to a resource group **foo** as a mandatory resource, enter:
   addrgmbr -m T -g foo IBM.Application:jfoo,foo
addrgmbr

Sample data input file.

PersistentResourceAttributes::
resource 1:
ManagedResource = "0x001b 0xffff 0x35c05b13 0x00000000 0x9a6ee5e0 0x0de8934c"
MemberOf = "charmC"
resource 2:
ManagedResource = "0x001b 0xffff 0x35c05b13 0x00000000 0xb4d7e1b0 0x0def4ba2"
MemberOf = "charmC"
Mandatory = 0
NominalState = 0

Files

/usr/sbin/rsct/bin/addrgmbr  Location of the addrgmbr command.

The rmccli General Information file.

The Resource_Data_Input file
Name

`chequ` – Changes an already-defined resource equivalency.

Synopsis

```
chequ [-h] [-i] -u a | d | r [-p A | O [,Failback | NoFailure | NoControl]] [-m Minimum_Necessary] [-T] [-V] -S "Static_select_string" Equivalency Resource_class
```

```
chequ [-h] [-i] -u r [-p A [,Failback | NoFailure | NoControl]] [-m Minimum_Necessary] [-T] [-V] -D "Dynamic_select_string" Equivalency Resource_class
```

```
chequ [-h] [-i] [-u a | d | r] [-p A | O [,Failback | NoFailure | NoControl]]
[-m Minimum_Necessary]
[Resource_name[::Node][...]]]
```

Description

The `chequ` command changes a resource equivalency. Resources can be added, removed, or totally replaced in an equivalency. All resources in an equivalency must be from the same resource class. Even the name of the equivalency can be changed with this command.

Equivalencies and their attribute flags can be specified on the command line as the syntax indicates. The value must be the same data type that is defined for the resource attributes. Use the `lsrsrcdef` command to verify the data type and attribute field for each attribute.

Options

```
-u a | d | r
```

Update Equivalency resources.

```
a     Adds the specified resources to the specified equivalency.
d     Deletes the specified resources from the specified equivalency.
r     Replace/Overwrite Equivalency resources. Replaces the equivalency resources with the specified equivalency resources.
```

```
-c New_Equiv
```

Specifies a new name that replaces the current Equivalency parameter.

```
-D "Dynamic_selection_string"
```

The specified selection string will be saved as the SelectString attribute for the concerned equivalency. This `dynamic_selection_string` is then applied to all resources of the specified resource class by the Recovery Manager to dynamically determine what members are to be included in the specified equivalency. This option must be used with the `r` option and can also not be combined with the `Resource_name[::Node]` operand. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

```
-D 'Name == "testing"'
-D 'Name != "test"
```
The –D option can neither be combined with the –S option nor with an ORDERED SelectFromPolicy (-p O).

–h Help. Writes the command’s usage statement to standard output.

–i Interactive Prompt. Prompt before changing equivalency.

–p A | O [Failback | NoFailure | NoControl]
Specifies the equivalency select-from policy. The value can be:
   A Any. This is the default value.
   O Ordered. The value cannot be used together with the -D option.

Additional, optional (comma-separated) values:
   • Failback (only in combination with Ordered)
   • NoFailure
   • NoControl

–m Minimum_Necessary
Minimum Necessary Equivalency. Specifies the minimum necessary members to make an equivalency valid.

–S “Static_selection_string”
The specified selection string will be applied to the specified resource class to determine the resources that make up the equivalency. These resources will then be saved as the Membership attribute for the concerned equivalency. This option cannot be combined with the Resource_name [: Node] operand. Resources can be added, deleted and replaced when using this string. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:
   -S 'Name == "testing"
   -S 'Name != "test"

–S cannot be combined with –D.

For information on how to specify selection strings, see “Using expressions” on page 93.

–T Writes the command’s trace messages to standard error. For your software-service organization’s use only.

–V Writes the command’s verbose messages to standard output.

Parameters

Equivalency
Specifies the unique name of the already defined equivalency to be changed.

Resource_class:Resource_name[:Node]
Specifies one or more resources that will be added to or deleted from the specified equivalency. All of the resources must be from the same resource class. An equivalency resource is identified by the resource class (Resource_class) and the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides. Resource_class, Resource_Name, and Node must be separated by a colon. Resource_class is the name of the Resource class the equivalency resource belongs to. The first resource or Resource_name[:Node] must be preceded by the Resource_class it belongs to and it must be separated by the colon (:) delimiter. Multiple resources
can be specified and are separated by a comma. Since all resources must be from the same class, the Resource_class is to be specified only once as the syntax indicates.

**Exit Status**

0  Command has run successfully.
1  Error occurred with RMC.
2  Error occurred with CLI script.
3  Incorrect flag on command line.
4  Incorrect parameter on command line.
5  Error occurred with RMC that was based on faulty command line input.
6  Resource specified was not found.
7  Resource already exists.

**Security**

This command requires root authority, or a user ID with appropriate permissions (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide](http://www.ibm.com/support/docview.wss?uid=swg21303272) section "Setting up non-root security").

**Examples**

1. To add another resource tester that belongs to resource class IBM.Application to an equivalency called foo, type:
   ```
   chequ -u a foo IBM.Application:tester
   ```
2. To delete a resource tester1 that belongs to resource class IBM.Application from an equivalency called test, enter:
   ```
   chequ -u d test IBM.Application:tester1
   ```
3. To add an equivalency called Jfoo with selected members of the resource class IBM.Application by using a select string, enter:
   ```
   chequ -u a -S "ResourceType==0" Jfoo IBM.Application
   ```
4. To overwrite an equivalency called Jfoo with selected members of the resource class IBM.Application by using a dynamic select string, enter:
   ```
   chequ -u r -D "ResourceType==0" Jfoo IBM.Application
   ```

**Files**

```
/usr/sbin/rsct/bin/chequ
```
Location of the chequ command.

**chrel**

### Name

**chrel** – Changes one or more managed relationships between resources.

### Synopsis

```
chrel [-h] [-i] [-u a | d | r] [-s "Selection_string"] [-c relation_name]
[-p relationship] [-o condition] [-W
New_Target_Class[Resource_name][Node][...]]
[-w "New_Target_string"] [-T] [-V]
```

```
New_Target_Class[Resource_name][Node]
]"New_Target_string"
[-T] [-V] Managed_Relation
```

```
chrel [-h] [-i] [-u a | d | r] [-c relation_name] [-p relationship] [-o condition]
[-W New_Target_Class[Resource_name][Node][New_Target_Class
:Resource_name][Node]]
[-s "New_Target_string"] [-S Source_Class
]"Source_string"
[-G Target_Class[Resource_name][Node]
[Target_Class[Resource_name][Node]]
[-g "Target_string"]
```

### Description

The **chrel** command modifies a managed relationship between resources. The managed relationship is between a source resource and one or more target resources. The source resource must be a member of a resource group. A target resource does not have to be in a resource group. Managed relationships and their attributes can be specified on the command line as the syntax indicates. The attribute value must be of the same data type that is defined for the resource attribute. Use the **lsrsrcdef** command to verify the data type and attribute field for each attribute.

### Options

- **-u a | d | r**
  - Update targets.
  - **a** Add the specified new target resources to the relationship defined for the source resources.
  - **d** Delete the specified new target resources from the relationship defined for the source resources.
  - **r** Replaces (overwrites) the relationship defined for the source resource with the specified new target resources.

- **-o condition**
  - Specifies the new condition to be used when a Location relationship (Collocated, AntiCollocated, Affinity, or AntiAffinity) or a StartAfter relationship (if Possible condition only) is defined. The value can be the numeric value or the word (not case-sensitive):
  - **0x0000 or NoCondition**
    - Specifies unconditional location relationship.
**chrel**

0x0001 or IfOnline
   Specifies that the target resource is online.

0x0002 or IfOffline
   Specifies that the target resource is offline, failed offline, or unknown.

0x0003 or IfNotOnline
   Specifies that the target resource is not online.

0x0004 or IfNotOffline
   Specifies that the target resource is neither offline nor failed offline.

0x0005 or IfPossible
   Used in conjunction with the StartAfter relationship. Specifies that the target resource group may be bypassed if it cannot be bound, in which case it ends up in Sacrificed state and the StartAfter relationship is ignored.

-O condition
   Specifies the condition value to query all the defined relationship to find a match with an existing condition. The value can be the numeric value or the word (not case-sensitive):

0x0000 or NoCondition
   Specifies unconditional location relationship.

0x0001 or IfOnline
   Specifies that the target resource is online.

0x0002 or IfOffline
   Specifies that the target resource is offline, failed offline, or unknown.

0x0003 or IfNotOnline
   Specifies that the target resource is not online.

0x0004 or IfNotOffline
   Specifies that the target resource is neither offline nor failed offline.

0x0005 or IfPossible
   Used in conjunction with the StartAfter relationship. Specifies that the target resource group may be bypassed if it cannot be bound, in which case it ends up in Sacrificed state and the StartAfter relationship is ignored.

-g Target_string
   The Target_string is applied to all resources of the resource class specified by the -G flag, to determine the targets of the relationship.

   If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-G Target_class[Resource_name[:Node]]
   Specifies the target resources to add, delete or replace with the relationship. The target resource or resources will be used with the source and any other specified query to find a match from all of the defined relationships. A target resource is identified by the resource's class (Target_class), the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides. Target_class, Resource_name, and Node must be separated by colons. Multiple target resources can be specified and are separated by commas. The colons are required, but omitting Target_class
or Resource_name causes the previously specified class or name to be used when multiple target resources are specified.

If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-h Writes the command’s usage statement to standard output.

-i Interactive. Prompt before changing relationships.

-c relation_name
   Specifies the new name for the specified managed relationship. This change-of-name can only be applied to one relationship. This means that if a name change is required, Queries and Selection strings should match with only one relationship.

-p relationship
   Specifies the new managed relationship to apply. The value can be the numeric value or the word (not case-sensitive):

0x0001 or Collocated
    Specifies that the source and the target resources are to be located on the same node.

0x0002 or AntiCollocated
    Specifies that the source and the target resources are to be located on different nodes.

0x0003 or Affinity
    Specifies that the source resource and its specified affinity resource are to be located on the same node, if possible.

0x0004 or AntiAffinity
    Specifies that the source resource and its specified affinity resource are to be located on different nodes, if possible.

0x0005 or IsStartable
    Specifies that the source and its target resources are startable.

0x0006 or StartAfter
    Specifies that the source is to be started after the target resources.

0x0007 or DependsOn
    Specifies that the target resources must be online before the source resource is started.
    • A DependsOn relationship also includes an implicit collocation between the source and target resources (see the description of Collocated relationship in the IBM Tivoli System Automation for Multiproducts Base Component Administrator’s and User’s Guide).
    • If a target resource fails, the source resource will also be stopped.

0x0008 or DependsOnAny
    Specifies that the target must be online before the source resource is started. It is identical to the DependsOn relationship except that it does not provide the collocated constraint for the start sequence. Therefore the source and target resources may not be started on the same node.

0x0009 or StopAfter
    Specifies that the source resource may not be stopped until after the target resource has been brought offline.
0x000A or ForcedDownBy
Specifies that the source resource must be forced offline in the event that either the target resource goes offline unexpectedly or the target resource itself is forced offline.

--P relationship
Specifies the managed relationship value used to query all the defined relationships to find a match. The value can be a numeric value or the word (not case-sensitive):

0x0001 or Collocated
Specifies that the source and the target resources are to be located on the same node.

0x0002 or AntiCollocated
Specifies that the source and the target resources are to be located on different nodes.

0x0003 or Affinity
Specifies that the source resource and its specified affinity resource are to be located on the same node, if possible.

0x0004 or AntiAffinity
Specifies that the source resource and its specified affinity resource are to be located on different nodes, if possible.

0x0005 or IsStartable
Specifies that the source and its target resources are startable.

0x0006 or StartAfter
Specifies that the source is to be started after the target resources.

0x0007 or DependsOn
Specifies that the target resources must be online before the source resource is started.
- A DependsOn relationship also includes an implicit collocation between the source and target resources (see the description of Collocated relationship in the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide).
- If a target resource fails, the source resource will also be stopped.

0x0008 or DependsOnAny
Specifies that the target must be online before the source resource is started. It is identical to the DependsOn relationship except that it does not provide the collocated constraint for the start sequence. Therefore the source and target resources may not be started on the same node.

0x0009 or StopAfter
Specifies that the source resource may not be stopped until after the target resource has been brought offline.

0x000A or ForcedDownBy
Specifies that the source resource must be forced offline in the event that either the target resource goes offline unexpectedly or the target resource itself is forced offline.

-w New_Target_string
Specifies the target selection string for the resources to add, delete or
replace with the relationship. New_Target_string is applied to all resources of the resource class specified by the -G option to determine the targets of the relationship.

If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-W New_Target_Class: Resource_name[; Node]

New Target resources. These resources will be added, deleted or replaced as required to or from the current list of target resources for the matching relationships. A target resource is identified by the resource’s class (Resource_class), the resource’s name (Resource_name), and optionally the node (Node) the resource is on. The Resource_class, Resource_name and Node must be separated by a colon. Multiple target resources can be specified and are separated by a comma. The colons are required but omitting the Resource_class or Resource_name causes the previously specified class or name to be used when specifying multiple target resources.

If the -g flag is used to specify a target selection string, Resource_name and Node must not be specified for -G.

-s Selection_string

Specifies the source selection string of the relationship to change. Selection_string is applied to all resources of the resource class specified by the -S option to determine the source of the relationship. The result of the selection may contain one or more resources.

If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-S Source_class[Resource_name[;Node]]

Specifies the source resource of the relationship to change. A source resource is identified by the resource class (Resource_class) of the resource, the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides. The result of the selection may contain one or more resources.

If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-T Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V Writes the command’s verbose messages to standard output.

Parameters

Managed_Relation

Name of the managed relationship to be changed. Using the -c flag, even the name of the relationship can be modified.

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
chrel

5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions
(for more information, see the [IBM Tivoli System Automation for Multiplatforms Base
Component Administrator’s and User’s Guide](#) section "Setting up non-root security").

Examples
1. To add a relationship for a resource tester that belongs to resource class
IBM.Application with target resources from resource class IBM.Application,
whose ResourceType is set to zero, enter:
   chrel -u a -S IBM.Application:tester -W IBM.Application -w "ResourceType==0"
   -G IBM.Application -g "ResourceType==1"
2. To modify a relationship for a source resource narten that belongs to resource
class IBM.Application to add resources tr0 and en0 of resource class
IBM.NetworkInterface, enter:
   chrel -u a -S IBM.Application:narten -W IBM.NetworkInterface:tr0,:en0

Files
/usr/sbin/rsct/bin/chrel Location of the chrel command.

rmrg, rmrgmbr commands.

The rmccli General Information file
chrg

Name

chrg – Changes persistent attribute values of one or more resource groups (including starting and stopping resource groups).

Synopsis

Description

The chrg command changes the persistent attribute values of one or more resource groups. The name of the resource group is specified by Resource_group. The resource groups to be changed can also be determined using the selection string with the -s option. The name of a resource group can also be changed with this command using the -c option. IBM Tivoli System Automation will then update all the associated member resources with this change. To allow IBM Tivoli System Automation to monitor and control these resource groups, the resource group must be in an Online Nominal State.

Options

-c new_name
   Specifies the new Resource_group name. Renames the Resource_group name with new_name.

-e equiv_name
   Specifies the equivalency name of the nodes on which the Resource_group can run. This option cannot be combined with the -n option. To set the resource group with the equivalency of all nodes in the cluster, specify equiv_name as the string ALL.

-h
   Writes the command’s usage statement to standard output.

-i
   Interactive. Prompt before changing resource groups.

-u a | d | r
   Specifies what should be done with the specified node list. Note that these options require the -x option.
   a    Adds the specified nodes to the list of excluded nodes.
   d    Deletes the specified nodes from the list.
   r    Replaces the exclude list with the specified nodes.

-x node1, ...noden
   Specifies the excluded node list. Only to be used in conjunction with -u a | d | r.
-chrg

-\textit{l} relationship
  Specifies the location relationship among the members of the resource group. The location relationship value can be entered as the numeric value or as the word (not case-sensitive):

  \textbf{0x0000 or None}  
  None. Specifies that member resources of the resource group can be on any node

  \textbf{0x0001 or Collocated}  
  Specifies that member resources of the resource group are to be located on the same node.

-\textit{n} node\_name
  Specifies the node on which the Resource\_group can run. This option cannot be combined with the -\textit{e} option.

-\textit{o} nominal\_state
  Specifies the Nominal state of the resource group, which can be online or offline. Nominal state values can be entered as the numeric value or as the word (not case-sensitive):

  \textbf{0x0000 or Online}  
  Online. Specifies that the desired state of Resource\_group is online.

  \textbf{0x0001 or Offline}  
  Offline. Specifies that the desired state of Resource\_group is offline.

-\textit{p} priority
  Specifies the relative importance of this resource group compared to other resource groups. Priority can be any integer from 0 to 200: the higher the integer, the higher the priority. The default priority value is 0.

-\textit{N} Owner
  A string with the name of the owner or contact for the group.

-\textit{D} Description
  A string describing the purpose of the group.

-\textit{I} InfoLink
  A string containing special instructions for the group, or a link to special instructions.

-\textit{s} Selection\_string
  Specifies the source selection string of the persistent attribute values to change. Selection\_string is applied to all existing resource groups.

  The selection string must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

  -\textit{s} 'Name == "testing"'
  -\textit{s} 'Name != "test"'
  -\textit{s} 'Name like "%"' (For all resources)

  For information on how to specify selection strings, see \textit{“Using expressions” on page 93}.

-\textit{T}  
  Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-\textit{V}  
  Writes the command’s verbose messages to standard output.
Parameters

Resource_group
The unique name of the resource group to be changed. This resource group must already exist for this operation to succeed. Multiple resource groups can be specified but must be separated by spaces.

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section "Setting up non-root security").

Examples

1. To change the persistent-attribute location relationship to Collocated, Nominal state to Online, and the priority value to 34 of a resource group called foo, enter:
   chrg -l collocated -o 0 -p 34 foo
2. To change the name of resource group foo to clusterfoo with location relationship now changed to None, and allowed node name of cluster, enter:
   chrg -c clusterfoo -l 0 -n cluster foo
3. To change the location relationship to None, and allowed node name cluster for all resource groups containing the name foo, enter:
   chrg -l none -n cluster -s 'Name like "%foo%"

Files

/usr/sbin/rsct/bin/chrg Location of the chrg command.

chrgmbr

Name

chrgmbr – Changes the persistent attribute value(s) of a managed resource in a resource group

Synopsis

chrgmbr [-h] [-i] [a | d | r] [-c New_group] [-m T | F] [-T] [-V]
     -g Resource_group [-p A | O]

     -g Resource_group [-p A | O] "selection_string"

chrgmbr [-h] [-i] [a | d | r] [-c New_group] [-m T | F] [-T] [-V]
     -s [-g Resource_group] [-p A | O] [Resource_class:"selection_string"
     [Resource_class:"selection_string" [...]]

chrgmbr [-h] [-i] [a | d | r] [-c New_group] [-m T | F] [-T] [-V]
     -g Resource_group [-p A | O]
     Resource_class:Resource_name:[Node][Resource_name:Node][...]
     [Resource_class:Resource_name:[Node][Resource_name:Node][...]] [...]]

Description

The chrgmbr command changes the attributes of the specified member resources. When the selection string is the only parameter, then it is applied directly to IBM.ManagedResource class. Otherwise, a resource name or selection string must be specified with the class to which it belongs. This command allows the user to specify changes to the Mandatory attribute of a managed resource by using the -m option and also allows the user to change the resource group to which the resource belongs by using the -c option. A fixed resource must include the resource class and the node name at which it resides. The resource class and resource name, the resource name and the node must be separated by a colon.

Options

- -c New_group
     Specifies a new resource group name, which changes the MemberOf attribute of the managed resource. This option specifies the Resource_group, or changes the Resource_group of which this managed resource is a member, to the New_group.

- -g Resource_group
     Specifies the name of the resource group of which the resources are members. This represents the MemberOf attribute of the Managed Resource.

- -h
     Writes the command’s usage statement to standard output.

- -i
     Interactive. Prompt before changing resource groups.

- a | d | r
     Specifies what should be done with the specified node list.
     - a Adds the specified nodes to the list of excluded nodes.
     - d Deletes the specified nodes from the list.
Parameters

- **r** Replaces the exclude list with the specified nodes.

- **m T | F**
  - Specifies whether this managed resource is required in the resource group.
  - T  TRUE. These managed resources are required by the resource group.
  - F  FALSE. These managed resources are not required by the resource group.

- **s** Specifies that a selection string will be used.

- **T** Writes the command’s trace messages to standard error. For your software-service organization’s use only.

- **V** Writes the command’s verbose messages to standard output.

- **p A | O**
  - Specifies the method to be used when selecting a node for placing the resource on. The value can be:
    - A  Any.
    - O  Ordered. This is the default.

---

**Resource_class**

Specifies the name of the resource class to which the member resource belongs. The resource and the resource class must be separated by the colon (:) delimiter. Also the selection_string and its resource_class must be separated by the colon (:) delimiter.

**Resource_class:**"selection_string"

The -s option determines this operand. Each selection string must be preceded by a resource class. Resource_class indicates the name of the resource class the selection_string will be applied to. The selection_string and it’s Resource Class must be separated by the colon (:) delimiter. The specified selection string will be applied to its corresponding Resource_class attributes to determine which member resources are to be changed. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

- s 'Name == "testing"'
- s 'Name != "test"'
- s 'Name like "%"' (For all resources)

For information on how to specify selection strings, see "Using expressions" on page 93.

**Resource_class:**Resource_Name[:Node]

This specifies one or more member resources that are to be changed. Resources belonging to different resource classes can also be specified using this syntax. However, member resources belonging to different classes must be separated by spaces. A member resource is identified by the resource’s class (Resource_class), the resource’s name (Resource_name), and optionally the node (Node) the resource is on. The Resource_class, Resource_Name and Node must be separated by a colon.

Resource_class is the name of the resource class the member resource belongs to. Resource_name is the name of the actual member resource in its class. Node is the name of the node the resource is located on. The
Node is required when attempting to change a fixed member resource. The Node and its resource must be separated by the colon delimiter (:). Multiple resources belonging to the same resource class can also be specified and are separated by a comma. In this case the first resource or Resource_name[Node] of a resource class must be preceded by the resource_class it belongs to and it must be separated by the colon delimiter (:), while the remaining resources are separated by a comma. Resource_class:Resource_name[Node][Resource_name[Node][,...]]

The member resources must exist in the resource group for it to be changed.

Selection_string
Specifies the selection string. The -s option determines this parameter. When this is the only parameter, then the selection string is applied to the member resources. But when included with Resource_class, each selection string in this case will be applied to its corresponding Resource_class attributes to determine which resources are to be modified in the Resource_group. The selection_string and its resource_class must be separated by the colon (:) delimiter. The selection string must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:
-s 'Name == "testing"'
-s 'Name ?= "test"'
-s 'Name like "s"' (For all resources)

Exit Status

0  Command has run successfully.
1  Error occurred with RMC.
2  Error occurred with CLI script.
3  Incorrect flag on command line.
4  Incorrect parameter on command line.
5  Error occurred with RMC that was based on faulty command line input.
6  Resource specified was not found.
7  Resource already exists.

Security

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section "Setting up non-root security").

Examples

1. To change the Mandatory attribute to TRUE of a member resource tester that belongs to resource class IBM.Application, enter:
   chrgmbr -m T IBM.Application:tester

2. To change the resource group to which member resources tester, Jfoo, and Dfoo of resource class IBM.Application belong from the current resource group foo to resource group footest, enter:
   chrgmbr -c footest -g foo IBM.Application:tester,Jfoo,Dfoo
To change the Mandatory attribute to FALSE of selected member resources of resource group `foo` with Resource_Type attribute set to one, belonging to resource class IBM.Application, enter:

```
chrgmbr -m F -s -g foo IBM.Application:*ResourceType==1*
```

**Files**

```
/usr/sbin/rsct/bin/chrgmbr
```

Location of the `chrgmbr` command.

The `rnccli` General Information file.
installSAM

installSAM

Name
installSAM – Checks that all installation or upgrade prerequisites are met and installs or upgrades the Base component of IBM Tivoli System Automation, including the end-to-end automation adapter.

Synopsis
installSAM [--noliccheck] [--noupgrade] [-d inst_pkg_dir] [-l log_file]

Description
The installSAM command first invokes the prereqSAM command, which checks that all prerequisites for the installation or upgrade of the Base component of IBM Tivoli System Automation are met. If the system passes the check, installSAM verifies that the license file is available and installs or upgrades the component, including the end-to-end automation management adapter. Information about the actions that are performed during both the prerequisites check and the installation are recorded in a log file. The default log file is /tmp/installSAM.<#>.log, where <#> is a sequential number; the highest number identifies the most recent log file.

Typically, no options need to be specified. The available options allow you to install or upgrade the component although no license file is available (--noliccheck), to prevent an upgrade (--noupgrade), to install the component although the installSAM script is not in the package directory (--d), and to specify that a log file other than /tmp/installSAM.<#>.log is to be used (--l).

Options

--noliccheck
Allows you to install or upgrade the Base component although no license file is available. This option is used by packages with which IBM Tivoli System Automation is bundled. If you specify the option, the fact is recorded in the log file.

--noupgrade
Prevents an upgrade of the Base component although an upgrade is required. You can use this option, for example, if only an initial installation is desired or to find out whether an upgrade would occur if the option were not specified.

--d inst_pkg_dir
Allows the installation of packages from the specified directory although the installSAM script is not available in the directory. This option is used by packages with which IBM Tivoli System Automation is bundled.

--l log_file
Logs information generated by the installSAM command to the specified log file.

Exit Status
These are the return codes returned by the installSAM command during the license check and installation. For information about the return codes returned during the prerequisites check, refer to ["prereqSAM" on page 63].

0 The installation or upgrade completed successfully.
<package installer> returned a return code other than 0; the return code and the corresponding message can be found in the log file. Package installer is:
  • AIX: installp
  • Linux: rpm

Package sam is already installed at the same version.

Package sam is already installed at a higher version.

Option –noupgrade was specified and package sam was found installed at a lower version than the package version. No upgrade was performed.

The node on which the installation task must be performed is online. The task was not performed.

The license file for the Base component of IBM Tivoli System Automation was not found, or no installed license could be detected, or the installation of the license failed.

installSAM was unable to continue because directories or files could not be detected or other conditions are not met.

Security

This command requires root authority.
Isequ

Name
Isequ – Lists already-defined resource equivalencies and their attributes.

Synopsis

Description
The Isequ command lists the Equivalencies. If the equivalency name is omitted, all of the defined equivalencies will be listed. If an equivalency is specified, the persistent attributes of the specified equivalency will be listed. If the Attr operand is specified, the attributes specified for the equivalency will be listed.

If the attribute flag is specified, the persistent or and dynamic attributes of the equivalencies will be listed. If specified, the Attr operand will override the -A flag. The Attr operand must be a valid equivalency attribute, when listing equivalency information. When the Attr operands are specified, the exact value of these attributes will be listed. Otherwise, some of these attribute values are translated into English words.

Options
-A p | d | b
Attribute type. By default, only persistent attributes are displayed. To view all the attributes of the member resources, this option must be used with the -A b attribute type. The value can be:

p Display only persistent attributes. For best performance, specify this value.

d Display only dynamic attributes.

b Display both persistent and dynamic attributes.

-d Specifies delimiter-formatted output. The default delimiter is a colon (:). Use the -D option if you wish to change the default delimiter.

-D Delimiter
Specifies delimiter-formatted output that uses the specified delimiter. Use this option to specify something other than the default colon (:); for example, when the data to be displayed contains colons. Use this option to specify a delimiter of one or more characters.

-e Equivalency
The name of the defined Equivalency to be listed.

-h Writes the command’s usage statement to standard output.

-l Specifies long formatted output. Each attribute is displayed on a separate line. This is the default display format.

-s "Selection_string"
Specifies a selection string. Used without the -e option, this option is applied to all the defined equivalencies. If the -e option is specified with a selection string, then this selection is applied only to the specified
equivalency. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

- `s 'Name == "testing"'
- `s 'Name ?= "test"'

Only persistent attributes may be included in a selection string.

For information on how to specify selection strings, see “Using expressions” on page 93.

- `t` Specifies tabular formatted output. Each attribute is displayed in a separate column, one resource per line.
- `T` Writes the command’s trace messages to standard error. For your software-service organization’s use only.
- `V` Writes the command’s verbose messages to standard output.

**Parameters**

`Attr` Specifies the names of one or more attributes whose values are to be displayed. These attributes must be separated by spaces.

**Exit Status**

**Security**

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section “Setting up non-root security”).

**Examples**

1. To list all currently-defined equivalencies, enter:

   ```
   lsequ
   ```

   Output:

   Displaying Eqivalencies:

   ```
   foo
   foo1
   equ1
   equ2
   ```

2. To list the persistent attributes of the equivalency `foo`, enter:

   ```
   lsequ -A p -e foo
   ```

   Output:
### lsequ

Displaying Equivalency Information:
Persistent Attributes
for Equivalency "foo".

Equivalency 1:
   Name             = foo
   MemberClass      = IBM.Application
   Resource:Node[Membership] = {IBM.Application:Nate}
   SelectString     = ""
   SelectFromPolicy = Any
   MinimumNecessary = 1

3. To list all the attributes of the equivalency **equ1**, enter:
   lsequ -A b -e equ1

   Output:
   Displaying Equivalency Information:
   All Attributes
For Equivalency "NetInt".
   Equivalency 1:
   Name             = equ1
   MemberClass      = IBM.Application
   Resource:Node[Membership] = {Nate:node1,Shoo:node2}
   SelectString     = ""
   SelectFromPolicy = Ordered
   MinimumNecessary = 1
   Resource:Node[ValidSelectResources] = {Nate:node1,Shoo:node2}
   Resource:Node[InvalidResources] = {}
   AutomationDetails[CompoundState] = Undefined

4. To list all the attributes of the equivalency **equ1** in verbose mode, enter:
   lsequ -V -A b -e equ1

   Output:
   Starting to list equivalency information.
lsequ: Executed on Mon Apr 3 15:48:49 2006 at "node1", master node "node1".
Displaying Equivalency Information:
   All Attributes
For Equivalency "NetInt".
   Equivalency 1:
   Name             = equ1
   MemberClass      = IBM.Application
   Resource:Node[Membership] = {Nate:node1,Shoo:node2}
   SelectString     = ""
   SelectFromPolicy = Ordered
   MinimumNecessary = 1
   Resource:Node[ValidSelectResources] = {Nate:node1,Shoo:node2}
   Resource:Node[InvalidResources] = {}
   AutomationDetails[CompoundState] = Undefined
   [DesiredState]   = Undefined
   [ObservedState]  = Online
   [BindingState]   = Undefined
   [AutomationState] = Undefined
   [ControlState]   = Undefined
   [HealthState]    = Not Applicable
Completed listing equivalency information.

5. To list the dynamic attributes of equivalency **foo**, enter:
   lsequ -A d -e foo

The rmccli General Information file
lsrel

Name

lsrel - Lists an already-defined managed relationship and its attributes.

Synopsis

lsrel [-h] [-s "selection_string"] [-A p | d | b] [-l | -t | -d | -D Delimiter] [-T] [-V] [Attr...]

lsrel [-h] [-S Source_Class[:Resource_name[:Node]]] [-s "Source_string"]
[-G Target_Class[:Resource_name[:Node]][Target_class[:Resource_name[:Node]]][...]]
[ -g "Target_string"] [-P Current_relationship]
[-O Current_condition] [-A p | d | b] [-l | -t | -d | -D Delimiter]
[-T] [-V] [Attr...]

Description

The lsrel command lists the managed relationships. If the relationship name is
omitted, all managed relationships will be listed. If the resource relationship is
specified, the persistent attributes of the specified relationship will be listed. If the
Attr parameter is specified, the attributes specified for the relationship will be
listed.

If the attribute option is specified, the persistent or dynamic attributes of the
relationships will be listed. If specified, the Attr parameter will override the -A
option. The Attr parameter must be a valid relationship attribute when listing
relationship information. If the Attr parameters are specified, the exact value of
these attributes will be listed. Otherwise, some of these attribute values are
translated to English words.

Options

-A p | d | b
  Specifies an attribute type. By default, only persistent attributes are
displayed. This option can be used only when no attribute names are
specified on the command line. To view all the persistent attributes of the
member resources, this flag must be used with -p attribute type.

  p  Displays only persistent attributes.
  d  Displays only dynamic attributes.
  b  Displays both persistent and dynamic attributes.

  For best performance, specify the -A p option.

-d  Specifies delimiter-formatted output. The default delimiter is a colon (:).
  Use the -D option if you wish to change the default delimiter.

-D Delimiter
  Specifies delimiter-formatted output that uses the specified delimiter. Use
  this option to specify something other than the default colon (:); for
  example, when the data to be displayed contains colons. Use this option to
  specify a delimiter of one or more characters.
-g Target_string
   The Target_string is applied to all resources of the resource class specified
   by the -G flag, to determine the targets of the relationship.
   If the -g option is used to specify a source selection string, Resource_name
   and Node must not be specified for the -G option.

-G Target_class[Resource_name][Node]]
   Specifies the target resources to display with the relationship. The target
   resource or resources will be used with the source and any other specified
   query to find a match from all of the defined relationships. A target
   resource is identified by the resource’s class (Target_class), the resource
   name (Resource_name), and, optionally, the node (Node) at which the
   resource resides. Target_class, Resource_name, and Node must be separated
   by colons. Multiple target resources can be specified and are separated by
   commas. The colons are required, but omitting Target_class causes the
   previously specified class to be used when multiple target resources are
   specified.
   If the -g option is used to specify a target selection string, Resource_name
   and Node must not be specified for the -G option.

-h  Writes the command’s usage statement to standard output.

-l  Specifies long formatted output. Each attribute is displayed on a separate
    line. This is the default display format.

-M relation_name
   Specifies the name of the managed relationship to be listed.

-P Current_relationship
   Specifies the managed relationship value used to query all the defined
   relationships to find a match. The value can be a numeric value or the
   word (not case-sensitive):

   0x0001 or Collocated
      Specifies that the source and the target resources are to be located
      on the same node.

   0x0002 or AntiCollocated
      Specifies that the source and the target resources are to be located
      on different nodes.

   0x0003 or Affinity
      Specifies that the source resource and its specified affinity resource
      are to be located on the same node, if possible.

   0x0004 or AntiAffinity
      Specifies that the source resource and its specified affinity resource
      are to be located on different nodes, if possible.

   0x0005 or IsStartable
      Specifies that the source and its target resources are startable.

   0x0006 or StartAfter
      Specifies that the source is to be started after the target resources.

   0x0007 or DependsOn
      Specifies that the target resources must be online before the source
      resource is started and includes an implicit collocation between the
      source and target resources.
0x0008  \textbf{or}  \textit{DependsOnAny}  
  Specifies that the target must be online before the source resource is started. It is identical to the \textit{DependsOn} relationship except that it does not provide the collocated constraint for the start sequence. Therefore the source and target resources may not be started on the same node.

0x0009  \textbf{or}  \textit{StopAfter}  
  Specifies that the source resource may not be stopped until after the target resource has been brought offline.

0x000A  \textbf{or}  \textit{ForcedDownBy}  
  Specifies that the source resource must be forced offline in the event that either the target resource goes offline unexpectedly or the target resource itself is forced offline.

\textit{--O Current\_condition}  
  If condition query. Specifies the condition value to query all the defined relationships to find a match. The value can be the numeric value or the word (not case-sensitive) as shown below:

0x0000  \textbf{or}  \textit{NoCondition}  
  Specifies unconditional location relationship.

0x0001  \textbf{or}  \textit{IfOnline}  
  Specifies that the target resource is online.

0x0002  \textbf{or}  \textit{IfOffline}  
  Specifies that the target resource is offline, failed offline, or unknown.

0x0003  \textbf{or}  \textit{IfNotOnline}  
  Specifies that the target resource is not online.

0x0004  \textbf{or}  \textit{IfNotOffline}  
  Specifies that the target resource is neither offline nor failed offline.

0x0005  \textbf{or}  \textit{IfPossible}  
  Used in conjunction with the \textit{StartAfter} relationship. Specifies that the target resource group may be bypassed if it cannot be bound, in which case it ends up in \textit{Sacred} state and the \textit{StartAfter} relationship is ignored.

\textit{--s "selection\_string"}  
  Specifies a selection string. This option without the \textit{-S} option will be applied to all the defined relationships and its attribute fields. All selection strings must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

- \textit{--s 'Name == "testing"'}
- \textit{--s 'Name != "test"'}

Only persistent attributes may be listed in a selection string.

For information on how to specify selection strings, see \textit{Using expressions} on page 93.

\textit{--s Source\_string}  
  Specifies the source selection string of the relationship to list. The \textit{Source\_string} is applied to all resources of the resource class specified by
the -S option to determine the source of the relationship. The result of the selection may contain one or more resources.

If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-S Source_class[Resource_name][Node]

Specifies the source resource of the relationship to list. A source resource is identified by the resource class (Resource_class) of the resource, the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides. The result of the selection may contain one or more resources.

If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-t

Specifies tabular formatted output. Each attribute is displayed in a separate column, one resource per line.

-T

Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V

Writes the command’s verbose messages to standard output.

Parameters

Attr  Specifies the names of one or more attributes whose values are to be displayed. These attributes must be separated by spaces. When the -m option is specified, these attributes must match the member resource attribute fields; when the -m option is not specified, the attributes must match the resource group attribute fields.

Node  Specifies the node name. The node name may have to be included when an attempt has been made to list a fixed member resource. The node and its resource must be separated by the colon (:) .

Resource_class

Specifies the name of the resource class to which the member resource belongs. The resource and the resource class must be separated by spaces.

Resource_name

Specifies the resource name. One or more resources may be specified along with the resource class to which it belongs. Each resource or set of resources must be preceded by its resource class. The resource and the resource class must be separated by spaces.

Security

This command requires root authority, or a user ID with appropriate permissions. (For more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide section "Setting up non-root security").

Examples

1. To list all the currently-defined managed relationships enter:
   lsrel

   Output:
   Displaying Managed Relations:
   Name     Resource:Node[Source]    ResourceGroup[Source]
   foo      IBM.Application:ja      Foo
   jaffinity IBM.Application:ja     Foo
           IBM.ResourceGroup:john     Ja

2. To list the persistent attributes of the managed relationship foo, enter:
   lsrel -A p -M foo

   Output is as follows:
   Displaying Managed Relationship Information:
   Persistent Attributes
   for Managed Relationship "foo".

   Managed Relationship 1:
   Class:Resource:Node(Source) = IBM.Application:ja:nodename
   Class:Resource:Node(Target) = {IBM.Application:Nate:Nodename}
   Relationship           = Collocated
   Conditional            = NoCondition
   Name                   = foo

3. To list the managed relationship that match the source foo from class IBM.Application, having a Collocated relationship value with target resource narten from class IBM.ResourceGroup, enter:
   lsrel -S IBM.Application:Foo -P Collocated -G IBM.ResourceGroup:narten

   Output is as follows:
   Displaying Managed Relationship Information:
   Managed Relationship 1:
   Name                   = Foo
   Class:Resource:Node(Source) = IBM.Application:Foo
   Class:Resource:Node(Target) = {IBM.ResourceGroup:Narten,IBM.Application:ja}
   Relationship           = Collocated
   Conditional            = NoCondition
   ResourceGroup(Source)   = charm

4. To list the dynamic attributes of the managed relationship name foo, enter:
   lsrel -A d -M foo

5. To list the persistent attributes of the managed relationship name foo by using a selection string, enter:
   lsrel -A p -s 'Name == "foo"'

Files

/usr/sbin/rsct/bin/lsrel     Location of the lsrel command.

The `rmccli` General Information file.

**lsrg**
lsrg

Name

lsrg – Lists already-defined resource groups and their members.

Synopsis

lsrg [-h] [-m] [-s "Selection_string"] [-A p | d | b] [-l | -t | -d | -D Delimiter]
[-g Resource_group] [-T] [-V] [ [Attr...]

Resource_class:Resource[:Node][,Resource[:Node][,...]][Resource_class:Resource[:Node]
[,Resource [:Node][,...]] [...]]

Description

The lsrg command lists resource groups or the members of a resource group. If the resource group name is omitted, all of the resource groups are listed. If the resource group name is specified without the -m option, the persistent attributes of the specified group will be listed. If the Attr parameter is specified, then the attributes specified for the resource group are listed. If the Attr parameter is specified here, the attributes specified for the resource group will be listed.

If the resource group name is specified with the -m option, the members of that resource group will be listed. If the attribute option (-A) is specified, the persistent or dynamic attributes of the resource group members will be listed. By default, the -m option lists the following attributes for the members of a resource group: Resource class name, Resource name, and the attributes MemberOf, OpState, WinSource, and Location. If the Attr operand is specified, then the attributes specified will be listed for the managed resources (member resources).

The Attr parameter if specified will override the -A option. The Attr parameter must be a valid resource group attribute when listing resource group information, and likewise be a valid member resource attribute when listing a managed resource. If the Attr parameters are specified, then the exact value of these attributes will be listed. Otherwise, some of these attribute values are translated into English words.

Options

-A p | d | b

Specifies an attribute type. By default, only persistent attributes are displayed. This option can be used only when no attribute names are specified on the command line. To view all the persistent attributes of the member resources, this flag must be used with p attribute type.

p Displays only persistent attributes.

d Displays only dynamic attributes.

b Displays both persistent and dynamic attributes.

For best performance, specify the -A p option.

-c

Specifies the resource and its class. This option indicates that parameters are resource classes, resource names, and, optionally, node names. The attributes of the member resources are listed or displayed. The attributes
and selection strings when this option is used are applied to member
resources and not the resource groups; therefore, these attributes must exist
for the member resources.

\textbf{\texttt{-d}} \hspace{1em} \textit{Specifies delimiter-formatted output. The default delimiter is a colon (:)}. Use the \texttt{-D} option if you wish to change the default delimiter.

\textbf{\texttt{-D \textit{Delimiter}}} \hspace{1em} \textit{Specifies delimiter-formatted output that uses the specified delimiter. Use this option to specify something other than the default colon (;); for example, when the data to be displayed contains colons. Use this option to specify a delimiter of one or more characters.}

\textbf{\texttt{-g \textit{Resource\_group}}} \hspace{1em} \textit{Displays resource group information such as the name and the persistent and dynamic attributes of the defined resource group. When the \texttt{-g} option is used with the \texttt{-m} option and the \texttt{-c} option, the member resources have to belong to the specified resource group.}

\textbf{\texttt{-h}} \hspace{1em} \textit{Writes the command’s usage statement to standard output.}

\textbf{\texttt{-l}} \hspace{1em} \textit{Specifies long formatted output. Each attribute is displayed on a separate line. This is the default display format.}

\textbf{\texttt{-m}} \hspace{1em} \textit{Specifies member resources and lists or displays the attributes of the member resources. The attributes and selection strings when this option is used are applied to member resources and not the resource groups; therefore, the attribute fields must exist for the member resources.}

\textbf{\texttt{-s \textit{"Selection\_string"}}} \hspace{1em} \textit{Specifies a selection string. This option without the \texttt{-m} option is applied to the resource-group attribute fields; with the \texttt{-m} option or \texttt{-c} option, the selection string is applied to the member-resource attribute fields. All selection strings must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:}

\begin{itemize}
  \item \texttt{-s 'Name == "testing"'}
  \item \texttt{-s 'Name != "test"'}
\end{itemize}

For information on how to specify selection strings, see \textcolor{blue}{“Using expressions” on page 93}.

\textbf{\texttt{-t}} \hspace{1em} \textit{Specifies tabular formatted output. Each attribute is displayed in a separate column, one resource per line.}

\textbf{\texttt{-T}} \hspace{1em} \textit{Writes the command’s trace messages to standard error. For your software-service organization’s use only.}

\textbf{\texttt{-V}} \hspace{1em} \textit{Writes the command’s verbose messages to standard output.}

**Parameters**

\textbf{\textit{Attr}} \hspace{1em} \textit{Specifies the names of one or more attributes whose values are to be displayed. These attributes must be separated by spaces. When the \texttt{-m} option is specified, these attributes must match the member resource attribute fields; when the \texttt{-m} option is not specified, the attributes must match the resource group attribute fields.}

\textbf{\textit{Node}} \hspace{1em} \textit{Specifies the node name. The node name may have to be included when an attempt has been made to list a fixed member resource. The node and its resource must be separated by the colon (:) delimiter.}
Isrg

Resource_class
Specifies the name of the resource class to which the member resource belongs. The resource and the resource class must be separated by the colon (:) delimiter.

Resource_name
Specifies the resource name. One or more resources may be specified along with the resource class to which it belongs. Each resource or set of resources must be preceded by its resource class. The resource and the resource class must be separated by the colon (:) delimiter.

Exit Status
0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions. (For more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section “Setting up non-root security”).

Examples
1. To list all the currently-defined resource groups, enter:
   lsrg

   Output is similar to:
   Resource Group Names:
       foo
       clusterfoo

2. To list all the attributes of the resource group foo, enter:
   lsrg -A -g foo

   Output is as follows:
   Displaying Resource Group Information:
   All Attributes
   For Resource Group "foo".
   Resource Group 1:
   Name = "foo"
   MemberLocation = Collocated
   Priority = 22
   AllowedNodes = "node1"
   NominalState = Online
   OpState = Offline
   TopGroup = foo
   AutomationDetails[CompoundState] = Automation

3. To list all the attributes of the resource group foo in verbose mode, enter:
lsrg -A b -V -g foo

Output is as follows:
Starting to list resource group information.
lsrg: Executed on Mon Apr 3 15:48:49 2006 at "node1", master node "node1".
Displaying Resource Group information:
All Attributes
For Resource Group "foo".

Resource Group 1:
Name  = "foo"
MemberLocation = Collocated
Priority   = 22
AllowedNodes = "node1"
NominalState = Online
OpState    = Offline
TopGroup
AutomationDetails[CompoundState] = Automation
[DesiredState] = Online
[ObservedState] = Pending Online
[BindingState] = Bound
[AutomationState] = Internal
[ControlState] = Startable
[HealthState] = Not Applicable
Completed listing resource group information.

4. To list the attributes of the members of resource group foo, enter:
lsrg -m -V -Ab -g foo

Output is as follows:
Starting to list member resource information.
lsrg: Executed on Mon Apr 3 15:48:49 2006 at "node1", master node "node1".
Displaying Member Resource information:
for Resource Group "foo".
Member Resource 1:
Mandatory = False
MemberOf    = foo
WinSource   = Nominal
Location    = node1
AutomationDetails[CompoundState] = Automation
[DesiredState] = Online
[ObservedState] = Pending Online
[BindingState] = Bound
[AutomationState] = Internal
[ControlState] = Startable
[HealthState] = Not Applicable
Completed listing member resource information.

5. To list the persistent attributes of the member resources of resource group foo, enter:
lsrg -m -A p -g foo

Output is as follows:
Displaying Member Resource information:
for Resource Group "foo".
Member Resource 1:
Mandatory = False
MemberOf    = foo

6. To list the persistent attributes of the member resources of a resource group foo using a selection string, enter:
lsrg -m -A p -s 'MemberOf == "foo"'
**lsrg**

Output is as follows:
Displaying Member Resource information:
for Resource Group "foo".
Member Resource 1:
  Mandatory = False
  MemberOf = foo

7. To list the attributes of a managed resource, enter:
   lsrg -m

Output is as follows:
Displaying Member Resource information:
IBM.Application:WebServer True DemoRG Online Nominal node1
IBM.ServiceIP:WebIP True DemoRG Online Nominal node1

**Files**

/bs/sbin/rsct/bin/lsrg  Location of the lsrg command.

**See Also**

The addrgmbr, samctrl, chrel, chrg, chrgmbr, mkrel, mkrg, rmrel, rmrg, rmrgmbr commands.

The rmccli General Information file.
lsrgreq

**Name**

**lsrgreq** – lists the outstanding requests applied against the resource groups or managed resources.

**lsrgreq** belongs to a group of commands (rgreq, rgmbrrq, and lsrgreq) which allow an operator to introduce persistent requests into IBM Tivoli System Automation. Using this set of commands the operator can start, stop, cancel, or move resource groups and managed resources.

**Synopsis**

```bash
```

```bash
Resource_class:Resource:[Node][,Resource:[Node][,...]]
[Resource_class:Resource:[Node][,Resource:[Node][,...]]]
```

```bash
Resource_class:”Selection_String” [Resource_class:”Selection_String” [,...]]
```

**Description**

The **lsrgreq** command lists the outstanding requests applied against the resource groups or managed resources. By means of the **lsrgreq** command either the active or all the outstanding requests may be listed. The “-m” option will only list the action requests on the managed or member resources. Otherwise, the action requests on the resource groups will be listed.

- **-h**  Help. Writes the command’s usage statement to standard output.

- **-g Resource_group**
  The name of the resource group whose actions are to be listed.

- **-L**
  Lists all the action requests on the specified resource group or managed resources. If this option is not specified then only the active requests will be displayed or listed.

- **-m**
  Member Resources. Lists or displays the actions on the member resources.

- **-s**
  Specifies that a selection string will be used.

- **-l**
  Long formatted output. Each attribute will be displayed on a separate line. This is the default display format.

- **-t**
  Tabular formatted output. Each attribute will be displayed on a separate column, one resource per line.

- **-d**
  Default delimiter formatted output. Default delimiter is a colon. Use the -D option if you wish to change the delimiter.

- **-D Delimiter**
  Delimiter formatted output. Use this flag to specify something other than the default colon(:). An example is when the data to be displayed contains colon. One or more characters can be used as the Delimiter.

- **-T**
  Trace. Writes the command’s trace messages to standard error. For software-service organization’s use only.
lsrgreq

-\(V\)  Verbose. Writes the command’s verbose messages to standard output.

**Parameters**

\(Resource\_class::\text{\textquote{selection\_string}}\)

The -s option determines this operand. Each selection string must be preceded by a resource class. \(Resource\_class\) indicates the name of the Resource class the \textit{selection\_string} will be applied to. The \textit{selection\_string} and its \(Resource\_class\) must be separated by colon or ";" delimiter. The specified selection string will be applied to its corresponding \(Resource\_class\) attributes to determine which member resources are to be removed from the Resource_group. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

-\(s\) IBM.Application::Name="testing"
-\(s\) IBM.Application::Name == "test"
-\(s\) IBM.Application::Name like "%%" (For all resources)

For information on how to specify selection strings, see [“Using expressions” on page 93](#).

\(Resource\_class::\text{\textquote{Resource[:Node]}}\)

Member Resources. This specifies one or more member resources whose action requests are to be listed. Resources belonging to different resource classes can also be specified using this syntax. However, member resources belonging to different classes must be separated by spaces. A member resource is identified by the resource’s class (\(Resource\_class\)), the resource’s name (\(Resource\)), and optionally the node (\(Node\)) the resource is on. The \(Resource\_class\), \(Resource\) and \(Node\) must be separated by a colon. \(Resource\_class\) is the name of the resource class the member resource belongs to. \(Resource\) is the name of the actual member resource in its class. The node may have to be included when trying to act on a fixed member resource. The node and its resource must be separated by the colon or ";" delimiter. Multiple resources belonging to the same resource class can also be specified and are separated by a comma:

\(Resource\_class::\text{\textquote{Resource[:Node][:Resource[:Node]]}}\)

The member resources must exist in the resource group for the requested action to take place.

Security

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide section "Setting up non-root security").

Examples

1. To list the active action requests on the resource group RG1, enter:

   ```
   lsrgreq -g RG1
   ```

2. To list the requests on all the resources belonging to resource group RG1 in tabular format, enter:

   ```
   lsrgreq -m -g RG1
   ```

   Displaying Member Resource request information:
   
   Active Requests
   
   For Resource Group "RG1":
   
   Member Resource 1:
   
   Class:Resource:Node[ManagedResource] = IBM.Application:R1
   Priority = Force
   Action = start
   Source = Operator
   ActiveStatus = Active

   Member Resource 2:
   
   Priority = low
   Action = start
   Source = ExtSched
   ActiveStatus = Active

3. To list all the action requests applied to resource group RG1, enter:

   ```
   lsrgreq -L -t -g RG1
   ```

   Displaying Resource Group request information:
   
   All request information
   
   For Resource Group "RG1":

<table>
<thead>
<tr>
<th>ResourceGroup</th>
<th>Priority</th>
<th>Action</th>
<th>Source</th>
<th>NodeList</th>
<th>ActiveStatus</th>
<th>MoveStatus</th>
</tr>
</thead>
<tbody>
<tr>
<td>RG1</td>
<td>low</td>
<td>stop</td>
<td>ExtSched</td>
<td>{}</td>
<td>InActive</td>
<td>None</td>
</tr>
<tr>
<td>RG1</td>
<td>High</td>
<td>start</td>
<td>Automation</td>
<td>{}</td>
<td>Active</td>
<td>None</td>
</tr>
<tr>
<td>RG1</td>
<td>Force</td>

**Name**

Issam – lists the defined resource groups and their members in tree format.

**Synopsis**

Issam [-h] [-top] [-g Resource_group] [-s "selection_string"] [-nocolor] [-T]

**Description**

The Issam command lists all resource groups and all resource group members in tree format.

**Options**

- **-h**
  Help. Writes the command’s usage statement to standard output.

- **-g Resource_group**
  Displays only the specified top-level resource group and its members in tree format.

- **-nocolor**
  Displays output without color-highlighting.

- **-s "selection_string"**
  Specifies a selection string for the resource group. All selection strings must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:
  - `s 'Name == "testing"'
  - `s 'Name != "test"'

- **-top**
  Displays the output at the top of the screen and refreshes the output every 10 seconds.

- **-T**
  Writes the command’s trace messages to standard error. For your software-service organization’s use only.

**Output format:**

```
[ <OpState> "IBM.ResourceGroup:"<GroupName> ["Request="<RequestStateList>]
  ["Automation="<AutomationMode>]
  ["Control="<ControlState>]
  ["Binding="<BindingState>]
  "Nominal="<NominalState>]
[ "|" <OpState> "IBM.ResourceGroup:"<GroupName> ["Request="<RequestStateList>]
  ["Automation="<AutomationMode>]
  ["Control="<ControlState>]
  ["Binding="<BindingState>]
  "Nominal="<NominalState>]
]*
[ "|" <OpState> <ResourceClass>"":"<FixedResourceName>":"<NodeName>
  ["Request="<RequestStateList>]
  ["Control="<ControlState>]
  ["Binding="<BindingState>]
  ["Node="<NodeState>]
]*
[ "|" <OpState> <ResourceClass>"":"<FloatingResourceName> ["Request="<RequestStateList>]
  ["Control="<ControlState>]
  ["Binding="<BindingState>]
]*
[ "|" <OpState> <ResourceClass>"":"<ConstituentResourceName>":"<NodeName>
  ["Node="<NodeState>]
```
Interpreting the output:

<OpState> - OpState of group/resource
   Color-coding scheme:
   "Unknown" – Blue
   "Offline" – Blue
   "Online" – Green
   "Failed offline" – Red
   "Stuck online" – Red
   "Pending online" – Yellow
   "Pending offline" – Yellow

<GroupName> - Name of the resource group
<ResourceClass> - Name of the resource class
<FixedResourceName> - Name of a fixed resource
<FloatingResourceName> - Name of a floating resource
<ConstituentResourceName> - Name of a constituent resource
<NodeName> - Name of a node (short host name)

<RequestStateList> - If requests are present, one or more request states with source indicator are shown
   <RequestState>[:"<SourceIndicator>]
   ["("<RequestState>":"<SourceIndicator>[","<RequestState>":"<SourceIndicator>"]+)

<RequestState> - Request action
   Color-coding scheme:
   "Online" – Green if inactive, yellow if active
   "Offline" – Blue if inactive, yellow if active
   "Lock" – Red
   "Move" – Not color-coded if inactive, yellow if active

<SourceIndicator> - First letter of the request source:
   "O" – Operator (if operator request is first in list, this indicator is not shown)
   "A" – Automation
   "E" – ExtSchedul
   "U" – Unknown

<AutomationState> - Automation attribute from lssamctrl (in red color)
   "Manual" – Automation disabled for this domain

<NodeState> - Some states of a node (in red color)
   "Offline" – Node is offline
   "Excluded" – Node is excluded (if a node is offline, "Excluded" is not shown)

<ControlState> - Some states of the AutomationDetails ControlState (in yellow color)
   "StartInhibited" – Start of dependent resource is not satisfactory (only if winning request and nominal state are Online)
   "StopInhibited" – Stop of dependent resource is not satisfactory (only if winning request and nominal state are Offline)

<BindingState> - Some states of the AutomationDetails BindingState (in red color)
   "Unbindable" – Configuration is incorrect
   "Sacrificed" – No system available to comply with configuration
   "Sacrificial" – No system available to comply with configuration

<NominalState> - Nominal State
   Color-coding scheme:
   Online - Green
   Offline - Blue
Exit Status

0     Command has run successfully.
1     An error occurred.

Security

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide section "Setting up non-root security").

Examples

To list all resource groups and their members, type the following command:

```bash
lssam
```

Output:

```plaintext
Online IBM.ResourceGroup:grp1 Nominal=Online
   `- Offline IBM.Application:res1:node1
Offline IBM.ResourceGroup:grp2 Nominal=Offline
   `- Offline IBM.Application:res2:node2
Online IBM.ResourceGroup:grp3 Request=Online Nominal=Offline
   `- Online IBM.Application:res3
      `- Online IBM.Application:res3:node1
         `- Failed offline IBM.Application:res3:node2
```

Sample screen capture:

![Sample screen capture]

Files

```
/usr/sbin/rsct/bin/lssam
```

Location of the `lssam` command.
Issamctrl

Name
Issamctrl – lists already defined IBM Tivoli System Automation control parameters and its attributes.

Synopsis
Issamctrl [-h] [-A p | d | b] [ -l | -t | -d | -D Delimiter ] [ -T ] [ -V ] [Attr...]

Description
The Issamctrl command lists the control parameter values already set for IBM Tivoli System Automation. If the Attr operand is specified, then the value of the attributes specified will be listed. If the attribute flag -A is specified then the persistent or/and dynamic attributes of IBM Tivoli System Automation will be listed. The Attr operand if specified will override the -A flag. The Attr operand must be a valid attribute of IBM Tivoli System Automation Control Class. When the Attr operands are specified then the exact value of these attributes will be listed. Otherwise, some of these attribute values are translated to English words.

Options
-h Help. Writes the command’s usage statement to standard output.
-A p | d | b Attribute type. By default only persistent attributes are displayed. To view all the persistent attributes of the member resources this flag must be used with p attribute type.
  • p - Displays only persistent attributes.
  • d - Displays only dynamic attributes.
  • b - Displays both persistent and dynamic attributes.
For best performance specify the -A p flag.
-l Long formatted output. Each attribute will be displayed on a separate line. This is the default display format.
-t Tabular formatted output. Each attribute will be displayed on a separate column, one resource per line.
-d Default delimiter formatted output. Default delimiter is a colon. Use the -D flag if you wish to change the delimiter.
-D Delimiter
  Delimiter formatted output. Use this flag to specify something other than the default colon(·). An example is when the data to be displayed contains colons. One or more characters can be used as the Delimiter.
-T Trace. Writes the command’s trace messages to standard error. For your software-service organization’s use only.
-V Writes the command’s verbose messages to standard output.

Parameters
Attr The name of the attributes whose values are to be displayed. These attributes must be separated by spaces.
Issamctrl

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide] section ‘Setting up non-root security’).

Examples
To list all the currently defined IBM Tivoli System Automation parameters, type the following command:

\texttt{lssamctrl}

Output:
Displaying IBM Tivoli System Automation Control Information:

\texttt{SAMControl:}
\begin{verbatim}
  TimeOut = 60
  RetryCount = 3
  Automation = Auto
  ExcludedNodes = {}
  ResourceRestartTimeOut = 5
  ActiveVersion = [1.2.0.0,Tue 04 May 2004 12:30:48 PM EDT]
  Enable Publisher = Disabled
  TraceLevel = 127
\end{verbatim}

mkequ

Name

mkequ – Makes a resource equivalency.

Synopsis

mkequ [-h] -f data_input_file [−T] [−V]

mkequ [-h] [−p A | O [,Failback | NoFailure | NoControl]] [−m Minimum_Necessary] [−T] [−V] −S "Static_select_string" Equivalency Resource_class

mkequ [-h] [−p A [,Failback | NoFailure | NoControl]] [−m Minimum_Necessary] [−T] [−V] −D "Dynamic_select_string" Equivalency Resource_class

mkequ [-h] [−p A | O [,Failback | NoFailure | NoControl]] [−m Minimum_Necessary] [−T] [−V] Equivalency Resource_class:Resource_name[:Node][,Resource_name[:Node][,...]]

Description

The mkequ command makes a resource equivalency among the specified resources. The resources must all be from the same resource class.

Equivalencies and their attribute flags can be specified on the command line as the syntax indicates or from a file when the -f option is specified. The value must be of the same data type that is defined for this resource attribute. Use the lsrsrcref command to verify the data type and attribute field for each attribute.

Options

–D "dynamic_select_string"

Dynamic Selection String. The specified selection string will be saved as the SelectString attribute for the concerned equivalency. This selection_string is then applied to all resources of the specified resource class by the Recovery Manager, to dynamically determine what members are to be included in the specified equivalency. This option cannot be combined with the Resource_name [:Node] parameter. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

- D 'Name == "testing"'
- D 'Name != "test"'

The –D option can neither be combined with the –S option nor with an ORDERED SelectFromPolicy (–p O).

For information on how to specify selection strings, see “Using expressions” on page 93.

–f data-input_file

Specifies the name of the file that contains equivalency attribute information.

–h

Writes the command’s usage statement to standard output.
-p A | O [Failback | NoFailure | NoControl]
   Specifies the equivalency select-from policy. The value can be:
   A    Any. This is the default value.
   O    Ordered. The value cannot be used together with the -D option.

Additional, optional (comma-separated) values:
• Failback (only in combination with Ordered)
• NoFailure
• NoControl

-S "static_select_string"
   Static Selection String. The specified selection string will be applied to
   the specified resource class, to determine the resources that make up the
   equivalency. These resources will then be saved as the Membership
   attribute for the equivalency. This option cannot be combined with the
   Resource name [:Node] parameter. The selection string must be enclosed
   within double or single quotation marks. If the selection string contains
   double quotation marks, enclose the entire selection string in single
   quotation marks. For example:
   -S 'Name == "testing"'
   -S 'Name != "test"'

   -S cannot be combined with -D.

For information on how to specify selection strings, see "Using
expressions" on page 93.

-m Minimum-Necessary
   Minimum Necessary Equivalency. Specifies the minimum necessary
   members to make an equivalency valid. The default value is 1.

-T   Writes the trace messages of the command to standard error. For your
     software service organization’s use only.

-V   Writes the verbose messages of the command to standard error.

Parameters

Equivalency
   Specifies the unique name of the new equivalency to be created.
   Equivalency names cannot contain the Dollar symbol ($).

Resource_class:Resource_name[:Node]
   Specifies one or more resources that will be members of the equivalency.
   All of the resources must be from the same resource class. A equivalency
   resource is identified by the resource name (Resource_name), and,
   optionally, the node (Node) where the resource resides.

   Resource names cannot contain the Dollar symbol ($). Resource_name and
   Node must be separated by colons. Multiple resources can be specified and
   are separated by a comma. Resource_class is the name of the resource class
   the equivalency resource belongs to. The first resource or
   Resource_name[:Node] must be preceded by the Resource_class it belongs to
   and it must be separated by the colon (:) delimiter. Multiple resources can
   be specified and are separated by a comma. Since all resources must be
   from the same class the Resource_class is to be specified only once as the
   syntax indicates.
mkequ

Exit Status

0  Command has run successfully.
1  Error occurred with RMC.
2  Error occurred with CLI script.
3  Incorrect flag on command line.
4  Incorrect parameter on command line.
5  Error occurred with RMC that was based on faulty command line input.
6  Resource specified was not found.
7  Resource already exists.

Security

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide section "Setting up non-root security").

Examples

1. To create an equivalency using the data input file, do the following:
   a. To generate a template to aid in the defining of these resources in a file, enter:
      ```
      lsrsrcdef -i IBM.Equivalency > /tmp/Equ.rdef
      ```
   b. Edit the file /tmp/Equ.rdef with your preferred text editor: (Enter values for all of the attributes, substituting an appropriate value for the type, or leave it blank if you want the default value.)
   c. Run the mkequ command with the file as follows:
      ```
      mkequ -f /tmp/Equ.rdef
      ```

Sample Data Input file for mkequ:
You can enter values for all of the attributes and thus change the value shown below, or remove the line with the attribute if you want the default value.

```terminal
PersistentResourceAttributes:
resource 1:
Name = "Equiv"
MemberClass = "IBM.NetworkInterface"
Membership = "0x000..."

resource 2:
Name = "Equiv2"
MemberClass = "IBM.Application"
Membership = "[App1,App2,App3]"
SelectFromPolicy = "Any"
MinimumNecessary = 2

resource 3:
Name = "Equiv3"
MemberClass = "IBM.Test"
SelectString = "Name?="Test"
SelectFromPolicy = "uint32"
MinimumNecessary = "uint32"
```

Chapter 1. IBM Tivoli System Automation commands 51
mkequ

2. To make an equivalency called foo with all the members of the resource class IBM.Application, enter:
mkequ -S 'Name like "%"' foo IBM.Application

3. To make an equivalency called foo with selected members tester, Jfoo, and Dfoo of the resource class IBM.Application, and set its policy to ordered, enter:
mkequ -p 0 foo IBM.Application:tester,Jfoo,Dfoo

4. To make an equivalency called Jfoo with selected members of the resource class IBM.Application by using a static select string, enter:
mkequ -S "ResourceType==0" Jfoo IBM.Application

5. To make an equivalency called Jfoo with selected members of the resource class IBM.Application using a dynamic select string, enter:
mkequ -D "ResourceType==0" Jfoo IBM.Application

6. To make an equivalency called netequ with selected members eth0 from nodes node1 and node2 of resource class IBM.NetworkInterface, and to set its policy to Ordered and Failback, enter:
mkequ -p 0,Fallback netequ IBM.NetworkInterface:eth0:node1,eth0:node2

Files

/usr/sbin/rsct/bin/mkequ Location of the mkequ command.

The Resource_Data_Input file.
Name

**mkrel** – Makes a managed relationship between resources.

Synopsis

```
mkrel [-h] [-f data_input_file] [-T] [-V]
mkrel [-h] [-p relationship] [-o condition] -S Source_class
       [:Resource_name[:Node]] [-s "Source_selection_string"]
-G Target_class[:Resource_name[:Node]],Target_class[:Resource_name
       [:Node][...]] [ -g "Target_selection_string"] [-T] [-V] [Managed_Relation]
```

Description

The **mkrel** command makes a relationship between resources. The relationship is between a source resource and one or more target resources. The source resource must be a member of a resource group. A target resource does not have to be in a resource group.

Managed relationships and their attribute flags can be specified on the command line as the syntax indicates or from a file when used with the -f option. The value must be the same data type that is defined for this resource attribute. Use the **lsrsrcdef** command to verify the data type and attribute field for each attribute.

Although optional, it is recommended to specify a name for the managed relationship.

Options

```
-o condition
```

Specifies an If condition to be used when a Location relationship (Collocated, AntiCollocated, Affinity, or AntiAffinity) or a StartAfter (for the IfPossible condition only) is defined. The value can be a numeric value or a word (not case-sensitive):

- **0x0000 or NoCondition**
  Specifies unconditional location relationship.

- **0x0001 or IfOnline**
  Specifies that the target resource is online.

- **0x0002 or IfOffline**
  Specifies that the target resource is offline, failed offline, or unknown.

- **0x0003 or IfNotOnline**
  Specifies that the target resource is not online.

- **0x0004 or IfNotOffline**
  Specifies that the target resource is neither offline nor failed offline.

- **0x0005 or IfPossible**
  Used in conjunction with the StartAfter relationship. Specifies that the target resource group may be bypassed if it cannot be bound, in which case it ends up in Sacrificed state and the StartAfter relationship is ignored.
-f data-input_file
  Specifies the name of the file that contains managed-relationship attribute information.

-g Target_selection_string
  Specifies the target selection string, which is applied to all resources of the resource class specified by the -G option to determine the targets of the relationship.
  
  If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-G Target_class[Resource_name[Node]]
  Specifies the target resources of the relationship. A target resource is identified by the resource class (Target_class) of the resource, the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides.
  
  Resource names cannot contain the Dollar symbol ($). Target_class, Resource_name, and Node must be separated by colons. Multiple target resources can be specified and are separated by commas. The colons are required, but omitting Target_class or Resource_name causes the previously specified class or name to be used when multiple target resources are specified.
  
  If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-h
  Writes the command’s usage statement to standard output.

-p relationship
  Specifies the managed relationship to apply. The value can be a numeric value or a word (not case-sensitive):
  
  0x0001 or Collocated
    Specifies that the source and the target resources are to be located on the same node.
  
  0x0002 or AntiCollocated
    Specifies that the source and the target resources are to be located on different nodes.
  
  0x0003 or Affinity
    Specifies that the source resource and its specified affinity resource are to be located on the same node if possible.
  
  0x0004 or AntiAffinity
    Specifies that the source resource and its specified affinity resource are to be located on different nodes if possible.
  
  0x0005 or IsStartable
    Specifies that the source and its target resources are startable.
  
  0x0006 or StartAfter
    Specifies that the source is to be started after the target resources.
  
  0x0007 or DependsOn
    Specifies that the target resources must be online before the source resource is started and includes an implicit collocation between the source and target resources.
  
  0x0008 or DependsOnAny
    Specifies that the target must be online before the source resource
is started. It is identical to the DependsOn relationship except that it does not provide the collocated constraint for the start sequence. Therefore the source and target resources may not be started on the same node.

0x0009 or StopAfter
   Specifies that the source resource may not be stopped until after the target resource has been brought offline.

0x000A or ForcedDownBy
   Specifies that the source resource must be forced offline in the event that either the target resource goes offline unexpectedly or the target resource itself is forced offline.

-s Source_selection_string
   Specifies the source selection string, which is applied to all resources of the resource class specified by the -S option to determine the source of the relationship. The result of the selection must contain only one resource.

   If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-S Source_class[Resource_name[Node]]
   Specifies the source resource of the relationship. A source resource is identified by the resource class (Source_class) of the resource, the resource name (Resource_name), and, optionally, the node (Node) at which the resource resides.

   Resource names cannot contain the Dollar symbol ($). Source_class, Resource_name, and Node must be separated by colons.

   If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-T  Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V  Writes the command’s verbose messages to standard output.

Parameters

Managed_Relation
   Optional name of the managed relationship. The name of a managed relationship cannot contain the Dollar symbol ($).

   If there are several managed relationships with the same source resource, it is recommended that you specify a name for the managed relationship. Otherwise the relationships will be consolidated into a single managed relationship after a policy save and activate action with the sampolicy command.

Exit Status

0   Command has run successfully.
1   Error occurred with RMC.
2   Error occurred with CLI script.
3   Incorrect flag on command line.
4   Incorrect parameter on command line.
mkrel

5   Error occurred with RMC that was based on faulty command line input.
6   Resource specified was not found.
7   Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions
(for more information, see the [IBM Tivoli System Automation for Multiplatforms Base
Component Administrator’s and User’s Guide](https://www.ibm.com/support) section "Setting up non-root security").

Examples
1. To create a new relationship using the data input file, do the following:
   a. To generate a template to aid in the defining of these relationships in a file, enter:
      ```bash
      lsrcrdef -i IBM.ManagedRelationship > /tmp/Rel.rdef
      ```
   b. Edit the file `/tmp/Rel.rdef` with your preferred text editor:(Enter values for all
      of the attributes, substituting an appropriate value for the type or leaving it
      blank if you want the default value.)
   c. Run the `mkrel` command with the file as follows:
      ```bash
      mkrel -f /tmp/Rel.rdef
      ```

Sample Data Input file for mkrel:
You can enter values for all of the attributes and thus change the value shown
below, or remove the line with the attribute if you want the default value.

PersistentResourceAttributes:
resource 1:
    Name           = "Rel1"
    Source         = "0x606b 0xffff 0x0fe8018b 0x3343381b 0xe8341f8 0x7da8a450"
    Target         = {"0x606b 0xffff 0x0fe8018b 0x3343381b 0xe8341fa 0x42a72de8", "0x...."}
    Relationship   = anticollocted
    Conditional    = i fofline

resource 2:
   = IBM.Application:App1
   Target         = "{IBM.NetworkInterface:eth0:node2,IBM.Application:App0}"
   Relationship   = collocated

2. To make a relationship named myrel for a resource tester that belongs to
resource class IBM.Application with target resources from resource class
IBM.Application, whose ResourceType is set to one, enter:
   ```bash
   mkrel -p collocated -S IBM.Application:tester -G IBM.Application -g "ResourceType==1" myrel
   ```

3. To make an Affinity relationship called test for a resource tester belonging to
resource class IBM.Application with target resource tester1 belonging to
resource class IBM.Application and target resources Jfoo belonging to resource
class IBM.Application, enter:
   ```bash
   mkrel -p affinity -S IBM.Application:tester -G IBM.Application:tester1,Jfoo test
   ```

4. To define a Collocated relationship named myrel for a source resource narten of
class IBM.Application to target resources tr0 and en0 of class IBM.ServiceIP;
enter:
   ```bash
   mkrel -p 1 -S IBM.Application:narten -G IBM.ServiceIP:tr0;:en0 myrel
   ```

5. To define a Collocated relationship named myrel for a source resource from a
selection string applied to the class IBM.Application with target resources tr0
and en0 of class IBM.ServiceIP, enter:
mkrel

mkrel -p collocated -S IBM.Application -s 'Name="narten"' -G IBM.ServiceIP:tr0,:en0 myrel

[-D Description] [-I InfoLink] [-T] [-V] [-x node1, node2] Resource_group [...]

Description

The mkrg command defines (makes) one or more new resource groups that can be monitored and controlled by IBM Tivoli System Automation. A resource group can only be defined on an online node in a cluster. A resource group definition defines the following to IBM Tivoli System Automation:

- Where the resource group is allowed to run,
- Relative importance of resource group to other resource groups, and
- Location relationship among the member resources of the resource group.

The new resource groups will default to an Offline state. This is to allow a user or administrator to fully configure the resource group and its resources, before allowing IBM Tivoli System Automation to take control of the resource group.

To allow IBM Tivoli System Automation to monitor and control the resource groups, the resource group must be in Online State or condition. See the chrg command to set this or any other option on an existing resource group.

The resource group and its attribute options can be specified on the command line as the syntax indicates or from a file when the -f option is used. The value must be the same data type that is defined for this resource attribute. Use the lsrsrcdef RMC command to verify the data type and attribute field for each attribute.

Options

- **-e equiv_name**
  Specifies the equivalency name of the nodes on which the Resource_group can run. This option cannot be combined with the -n option. The default value is ALL, which implies an equivalency of all nodes in the cluster.

- **-f data_input_file**
  Name of the file which contains resource group attribute information.

- **-h**
  Writes the command’s usage statement to standard output.

- **-l relationship**
  Specifies the location relationship among the members of the resource group. The location relationship value can be:

  0x0000 or None
  Specifies that member resources of the resource group can be on any node

  0x0001 or Collocated
  Specifies that member resources of the resource group are to be located on the same node.
The default value is **Collocated**.

**\( -n \) node_name**

Specifies the node on which the Resource_group can run. This option cannot be combined with the **-e** option. The default value is ALL, which implies all nodes in the cluster.

**\( -p \) priority**

Specifies the relative importance of this resource group compared to other resource groups. Priority can be any integer from 0 to 200: the higher the integer, the higher the priority. The default priority value is 0.

**\( -N \) Owner**

A string with the name of the owner or contact for the group.

**\( -D \) Description**

A string describing the purpose of the group.

**\( -I \) InfoLink**

A string containing special instructions for the group, or a link to special instructions.

**\( -T \)**

Writes the command’s trace messages to standard error. For your software-service organization’s use only.

**\( -V \)**

Writes the command’s verbose messages to standard output.

**\( -x \) node1, ...noden**

Specifies the excluded node list.

**Parameters**

- **Resource_group**
  
  The unique name of the new resource group(s) to be created. Note that resource group names cannot contain the Dollar symbol ($).

**Exit Status**

- **0** Command has run successfully.
- **1** Error occurred with RMC.
- **2** Error occurred with CLI script.
- **3** Incorrect flag on command line.
- **4** Incorrect parameter on command line.
- **5** Error occurred with RMC that was based on faulty command line input.
- **6** Resource specified was not found.
- **7** Resource already exists.

**Security**

This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section "Setting up non-root security").

**Examples**

1. To create resource groups using the data input file, do the following:
To generate a template to aid in the defining of these resources in a file, enter:

```
lsrsrdef -i IBM.ResourceGroup > /tmp/RG.rdef
```

b. Edit the file /tmp/RG.rdef with your preferred text editor: (Enter values for all of the attributes, substituting the appropriate value for the type, or remove the line with the attribute if you want the default value.)

c. Run the `mkrg` command with the file as follows:

```
mkrg -f /tmp/RG.rdef
```

**Sample Data Input file for mkrg:**
You can enter values for all of the attributes and thus change the value shown below, or remove the line with the attribute if you want the default value.

**PersistentResourceAttributes:**

<table>
<thead>
<tr>
<th>resource 1</th>
<th>resource 2</th>
<th>resource 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>= InputFile1a</td>
<td>Name</td>
</tr>
<tr>
<td>MemberLocation</td>
<td>&quot;1&quot;</td>
<td>MemberLocation</td>
</tr>
<tr>
<td>Priority</td>
<td>= &quot;32&quot;</td>
<td>NominalState</td>
</tr>
<tr>
<td>NominalState</td>
<td>= &quot;1&quot;</td>
<td>AllowedNode</td>
</tr>
</tbody>
</table>

2. To define a new resource group called `foo` with all default values, enter:

```
mkrg foo
```

3. To define new resource groups called `foo` and `foo1` with location relationship “none”, and allowed node name “cluster1”, enter:

```
mkrg -l none -n cluster1 foo foo1
```

4. To define a new resource group called `foo` with location relationship “Collocated”, priority value of 22, and allowed equivalency name “cluster1”, enter:

```
mkrg -l collocated -e cluster1 -p 22 foo
```

**Files**

- `/usr/sbin/rsct/bin/mkrg` Location of the `mkrg` command.
- `data_input_file`

**See Also**

- The `addrmbr`, `samctrl`, `chrg`, `chrgmbr`, `lsrg`, `rmrg`, `rmrgmbr` commands.
- The `Resource_Data_Input` file.
- The `rmccli` General Information file.
**Name**

*pidmon* - Searches the process list for a command string or takes the OpState from a file.

**Synopsis**

```
pidmon [-h] [-d debugmode] [-u uid] [-c] command_string

pidmon [-h] [-d debugmode] -f opstate_file
```

**Description**

The *pidmon* command searches the process list for a given command string. If the command string was found, the RMC OpState Online is returned. The *pidmon* command can be used as a generic monitor for the IBM.Application resource class. Optionally the RMC OpState can be taken from a specified file.

**Options**

- **-h**
  - Writes the command’s usage statement to standard output.

- **-d debugmode**
  - Specifies the debug mode.

- **-u uid**
  - Specifies a user ID for the command string search.

- **-c**
  - Command string search (this is default).

- **-f**
  - OpState is taken from file.

**Parameters**

- **debugmode**
  - Can be one of the following options:
    1. Write debug messages to syslog.
    2. Write debug messages to standard output/error.
    3. Write detailed debug messages to standard output/error and syslog.

- **uid**
  - Searches process list for command string which belongs to the specified user id. RMC_OPSTATE_ONLINE is only reported if there is a process with the specified command string and owner of this process is uid.

- **opstate_file**
  - This is a plain text file containing just one of the RMC OpStates shown below. The *pidmon* command reads this text file and returns OpState from the file.

**Exit Status**

Against usual command convention *pidmon* does not return 0 on success or another value on error. It returns the RMC OpState. An exit status of 0 means RMC OpState unknown which indicates an error in the *pidmon* command. Valid RMC OpStates are:

- **0** RMC_OPSTATE_UNKNOWN
- **1** RMC_OPSTATE_ONLINE
- **2** RMC_OPSTATE_OFFLINE
Security
This command does not require special permissions.

Examples
1. Searches for the process with the command string `/bin/bash` and returns OpState online (exit status 1).
   ```
pidmon '/bin/bash'/
   echo $?
   1
   ```
2. Searches for the process with the command string `/bin/bash`, but it does not belong to the user id foo. `pidmon` returns OpState offline (exit status 2).
   ```
pidmon -u foo '/bin/bash'/
   echo $?
   2
   ```
3. `pidmon` reads myopstate file, which only contains the number '3', and returns OpState failed offline (exit status 3).
   ```
pidmon -f myopstate
   echo $?
   3
   ```
4. Use the `pidmon` command as a generic monitor command for an IBM.Application resource definition:
   ```
lsrsrc -s "Name='syslogd'" IBM.Application
resource 1:
   Name = "syslogd"
   ResourceType  = 0
   AggregateResource = "0x3fff 0xffff 0x00000000 0x00000000 0x00000000 0x00000000"
   StartCommand = "/etc/init.d/syslog start"
   StopCommand  = "/etc/init.d/syslog stop"
   MonitorCommand = "/usr/sbin/rsct/bin/pidmon '/sbin/syslogd'"
   ....
   ```

Files
```
/usr/sbin/rsct/bin/pidmon       Location of the pidmon command.
```

prereqSAM

Name
prereqSAM – Checks that all prerequisites for the installation or upgrade of the Base component of IBM Tivoli System Automation, including the end-to-end automation adapter, are met.

Synopsis
prereqSAM [-d inst_pkg_dir] [-l log_file]

Description
The prereqSAM command checks whether all prerequisites for the installation or upgrade of the Base component of IBM Tivoli System Automation are met. The command is invoked by the installSAM command but can also be run separately. If invoked separately, you can specify options that allow you run the check although the prereqSAM script is not in the package directory (-d), and to specify that a log file other than the default is to be used (-l).

The name of the default log file is /tmp/prereqSAM.<#.log, where <#> is a sequential number; the highest number identifies the most recent log file.

Options
- –d inst_pkg_dir
  Allows you to perform the prerequisites check based on NLS files in the specified directory although the prereqSAM script is not available in the directory. prereqSAM is not dependent on the packages to be installed but needs the directory for its message files.

- –l log_file
  Logs information generated by the prereqSAM command to the specified log file.

Exit Status
These are the return codes returned by the prereqSAM regardless of whether the command is invoked by the installSAM script or separately.

0  The system passed the prerequisite check. The version of the operating system is supported and all prerequisite packages were found installed at the correct version. The log file contains the names and versions of the installed packages.

20 The installed package does not have the correct version. The log file contains the names and versions of the missing packages.

21 A package was not found installed.

22 The operating system version is not supported.

23 The prerequisites check could not be performed. A file may be missing. Refer to the log file for a detailed description of the problem.

Security
This command does not require root authority.
Name

`rgmbrreq` – Requests for a managed resource to be started, stopped, or cancelled.

`rgmbrreq` belongs to a group of commands (rgreq, rgmbrreq, and lsrgreq) which allow an operator to introduce persistent requests into IBM Tivoli System Automation. Using this set of commands the operator can start, stop, cancel, or move resource groups and managed resources.

Synopsis

```
```

Resource_class:Resource[:Node][.Resource[:Node]]

```
[Resource_class:Resource[:Node][.Resource[:Node]]][...]
```

```
```

Resource_class:"Selection_String" [Resource_class:"Selection_String" [...]]

Description

By means of the `rgmbrreq` command the operator or any originator (source) asks for the managed resource to be started, stopped, or cancelled. Start and Stop requests will last until explicitly removed or cancelled by the operator. A request coming from the same source replaces a former request from that source - that is, it cancels the previous request automatically. A move request is not allowed for a managed resource. A stop or a start request can be cancelled by the same source that enabled it.

Options

```
-h     Help. Writes the command’s usage statement to standard output.
-p priority
       Determines how important the request is with regard to other requests within the resource structure. The priority allows IBM Tivoli System Automation to solve conflicting requests for the same resource. Can be one of the following:
       low      low priority. This is the default.
       high     high priority.
       force    takes precedence of request posted with high priority.
-o action
       is the actual action request. It can be one of the following:
       start    sets the nominal state of the resource to online.
       stop     sets the nominal state of the resource to offline.
       cancel   cancels a previously entered request. The request is identified by the source of the request (-S parameter) and the resource name.
-s     Specifies that a selection string will be used.
```
rgmbrrreq

-S source
Identifies the originator of the request. This can be one of the following strings:
• Operator
• ExtSched
• Automation

Any others will be allowed, but will get the lowest priority. If source is not specified then, it will default to "Operator". When cancelling the request, the same source string must be specified. Note that each source can only have one active request of each type against each resource. If the source makes a second request directly against the resource, it will replace their first request. The source option allows the installation to identify the different organizational units and the roles they are playing. Another usage is to distinguish between who made or where the request came from, for example from the operator versus an automation shell script.

-u userID
The user or operator Id of the originator of the request. This can be any string. If the string contains blanks, it must be enclosed in quotes.

-c comments
A string representing a remark that might be related to the request. If the string contains blanks, it must be enclosed in quotes.

-T Trace. Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V Verbose. Writes the command’s verbose messages to standard output.

Parameters

Resource_class: "selection_string"
The -s option determines this operand. Each selection string must be preceded by a resource class. Resource_class indicates the name of the Resource class the selection_string will be applied to. The selection_string and its Resource_class must be separated by colon or ":" delimiter. The specified selection string will be applied to its corresponding Resource_class attributes to determine which member resources are to be removed from the Resource_group. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

-s IBM.Application:Name=="testing"
-s IBM.Application:Name ?="test"
-s IBM.Application:Name like "%" (For all resources)

For information on how to specify selection strings, see "Using expressions" on page 93.

Resource_class: Resource[Node]
Member Resources. This specifies one or more member resources that are to be acted on. Resources belonging to different resource classes can also be specified using this syntax. However, member resources belonging to different classes must be separated by spaces. A member resource is identified by the resource’s class (Resource_class), the resource’s name (Resource_name), and
rgmbrreq

optionally the node (Node) the resource is on. The Resource_class, Resource and Node must be separated by a colon. Resource_class is the name of the resource class the member resource belongs to. Resource is the name of the actual member resource in its class. The node may have to be included when trying to act on a fixed member resource. The node and its resource must be separated by the colon or ":" delimiter. Multiple resources belonging to the same resource class can also be specified and are separated by a comma: 

`Resource_class:Resource[.Node][.Resource[.Node][,...]]`

The member resources must exist in the resource group for the requested action to take place.

Exit Status

Security

This command requires root authority, or a user ID with appropriate permissions (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide](#) section “Setting up non-root security”).

Examples

1. To request a start action on application App1 of IBM.Application on Node1, enter:

   `rgmbrreq -o start IBM.Application:App1:Node1`

Files

`/usr/sbin/rsct/bin/rgmbrreq` Location of the `rgmbrreq` command.

See Also

The `addrmgbr`, `chrg`, `chrgmbr`, `lsrg`, `lsrgreq`, `mkrg`, `rgreq`, `rmrg`, and `rmrgmbr` commands.
rgreq

Name

rgreq – Requests for a resource group to be started, stopped, cancelled, or moved.

rgreq belongs to a group of commands (rgreq, rgmbreq, and lsrgreq) which allow an operator to introduce persistent requests into IBM Tivoli System Automation. Using this set of commands the operator can start, stop, cancel, or move resource groups and managed resources.

Synopsis

Description

The rgreq allows requests into IBM Tivoli System Automation against resource groups. The operator or any originator (also called source) asks for the resource group to be started, stopped, cancelled or moved. Start and Stop requests will last until explicitly removed or cancelled by the operator. A request coming from the same source replaces a former request from that source - it cancels the previous request automatically. Start and Stop requests cancel each other, but Move requests do not. Since Move and Start/Stop request are of different types, both a Move request and a Start or a Stop request from the same source against the same resource may be allowed. For example, request a resource group to start, then request it to move. When the resource group has been moved, the Start request should still be in place.

A Move request is automatically removed when the move action is carried out or cancelled by the recovery resource manager (IBM.RecoveryRM). A Move request cannot be cancelled by any source. Stop and Start requests may be cancelled at any time. However, the cancel requests must come from the same source as the original Start and Stop requests.

Options

- h      Help. Writes the command’s usage statement to standard output.

- p priority
  Determines how important the request is with regard to other requests within the resource structure. The priority allows IBM Tivoli System Automation to solve conflicting requests for the same resource. Can be one of the following:

  low     low priority. This is the default.
  high    high priority.
  force   takes precedence of request posted with high priority.

- o action
  is the actual action request. It can be one of the following:

  start   sets the nominal state of the resource to online.
  stop    sets the nominal state of the resource to offline.
  move    moves the resource group and its underlying resources to another
node in the cluster. This is the process of stopping an active set of resources and starting them on a different node(s) in a coordinated fashion.

cancel cancels a previously entered request. The request is identified by the source of the request (-S parameter) and the resource name. Unlike the start/stop the move action cannot be cancelled.

-S source
identifies the originator of the request. This can be one of the following strings:
• Operator
• ExtSched
• Automation

Other originators are allowed, but will get the lowest priority. If source is not specified then, it will default to "Operator". When cancelling the request, the same source string must be specified. There are two types of request. Start and Stop requests are of one type, and the Move request is of another type. Note that each source can only have one active request of each type against each resource. If the source makes a second request directly against the resource, it will replace their first request. The source option allows the installation to distinguish where the request came from, for example from the operator versus an automation shell script.

-n node1,...noden
The originating nodes. This option can only be applied for a move action. It identifies the nodes to move the resource group or its underlying resources from. This option is required for an anticollocated resource group.

-u userID
The user or operator Id of the originator of the request. This can be any string. If the string contains blanks, it must be enclosed in quotes.

-c comments
A string representing a remark that might be related to the request. If the string contains blanks, it must be enclosed in quotes.

-T Trace. Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V Verbose. Writes the command’s verbose messages to standard output.

Parameters

Resource_group
the name of the resource group. This is the entry point at which the request is introduced into the resource structure and from which it propagates outwards.

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
Error occurred with RMC that was based on faulty command line input.
Resource specified was not found.
Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions
(for more information, see the IBM Tivoli System Automation for Multiplatforms Base
Component Administrator's and User's Guide section "Setting up non-root security").

Examples
1. To move all the resources from node1 in resource group RG1, enter:
   rgreq -n node1 -o move RG1
2. To stop all the resources in resource group RG2, enter:
   rgreq -o stop RG2

Files
/usr/sbin/rsc/bin/rgreq Location of the rgreq command.

Name

rmequ – Removes one or more already-defined resource equivalencies.

Synopsis

rmequ [-h] [-i] [-s "selection_string"] [-T] [-V] [Equivalency [...]]

rmequ [-h] [-i] [-T] [-V] Equivalency [...]

Description

The rmequ command removes one or more resource equivalencies specified by Equivalency parameters or equivalencies derived from selection strings.

Options

-h Writes the command’s usage statement to standard output.
-i Interactive. Prompt before removing equivalencies.
-s "selection_string" Specifies the equivalency selection string. This selection_string is applied to all the existing equivalencies when an equivalency parameter is not specified. When equivalency parameters are specified, then the specified selection_string is only applied to the specified equivalency parameters. The selection_string must be enclosed within double or single quotation marks. If the selection_string contains double quotation marks, enclose the entire selection_string in single quotation marks. For example:
-s 'Name == "testing"'
-s 'Name ?= "test"

For information on how to specify selection strings, see “Using expressions” on page 93.

-T Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-V Writes the command’s verbose messages to standard output.

Parameters

Equivalency

Specifies the name of the defined resource equivalency to be removed. Multiple equivalencies may be specified, but must be separated by spaces.

Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
Resource specified was not found.
Resource already exists.

Security
This command requires root authority, or a user ID with appropriate permissions
(for more information, see the IBM Tivoli System Automation for Multiplatforms Base
Component Administrator's and User's Guide section "Setting up non-root security").

Examples
1. To remove an equivalency called foo, enter:
   \texttt{rmequ foo}
2. To remove equivalencies called \texttt{foo}, \texttt{foo1}, and \texttt{foo2}, enter:
   \texttt{rmequ foo foo1 foo2}

Files
\texttt{/usr/sbin/rsct/bin/rmequ} Location of the \texttt{rmequ} command.

See Also
The \texttt{chequ}, \texttt{samctrl}, \texttt{lsequ}, \texttt{mkequ} commands.

The \texttt{rmccli} General Information file
Name

rmrel – Removes a managed relationship between resources.

Synopsis

rmrel [-h] [-i] -s "selection_string" [-T] [-V]

rmrel [-h] [-i] -S Source_Class[:Resource_name[:Node]] [-s “Source_string”]
[ -G Target_Class[:Resource_name[:Node[:Target_class:Resource_name
[:Node][:..]]]] -g “Target_string”] [-P Current_relationship]
[ -O Current_condition] [-T] [-V]

Description

The rmrel command removes a relationship between resources. The relationship to be removed is determined by the source parameter (Source_class [:Resource_name [:Node]]) or by the selection string when it is applied to the relationship itself or the name(s) of the managed relationship(s).

Options

-O Current_condition
    Specifies the condition value to query all defined relationships, in order to find a match. The value can be the numeric value or the word (not case-sensitive):
    • 0x0000 or NoCondition
    • 0x0001 or IfOnline
    • 0x0002 or IfOffline
    • 0x0003 or IfNotOnline
    • 0x0004 or IfNotOffline
    • 0x0005 or IfPossible

-g Target_string
    The Target_string is applied to all resources of the resource class specified by the -G flag, to determine the targets of the relationship.

    If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.

-G Target_class[:Resource_name[:Node]]
    Specifies the target resource to be used with the target query, and any other specified query, to find a match from all defined relationships. A target resource is identified by the class of the resource (Target_class), the name of the resource (Resource_name), and optionally the node (Node) on which the resource is located. The Resource_class, Resource_name and Node must be separated by a colon. Multiple target resources can be specified and are separated by a comma. The colons are required, but if the Target_class is omitted, the previously-specified class will be used when specifying multiple target resources.

    If the -g option is used to specify a target selection string, Resource_name and Node must not be specified for the -G option.
rmrel

-h  Writes the command’s usage statement to standard output.
-i  Interactive. Prompt before removing relationships.
-P  Current_relationship
    Specifies the managed relationship value used to query all the defined
    relationships to find a match. The value can be a numeric value or the
    word (not case-sensitive):

    0x0001 or Collocated
    Specifies that the source and the target resources are to be located
    on the same node.

    0x0002 or AntiCollocated
    Specifies that the source and the target resources are to be located
    on different nodes.

    0x0003 or Affinity
    Specifies that the source resource and its specified affinity resource
    are to be located on the same node, if possible.

    0x0004 or AntiAffinity
    Specifies that the source resource and its specified affinity resource
    are to be located on different nodes, if possible.

    0x0005 or IsStartable
    Specifies that the source and its target resources are startable.

    0x0006 or StartAfter
    Specifies that the source is to be started after the target resources.

    0x0007 or DependsOn
    Specifies that the target resources must be online before the source
    resource is started and includes an implicit collocation between the
    source and target resources.

    0x0008 or DependsOnAny
    Specifies that the target must be online before the source resource
    is started. It is identical to the DependsOn relationship except that
    it does not provide the collocated constraint for the start sequence.
    Therefore the source and target resources may not be started on the
    same node.

    0x0009 or StopAfter
    Specifies that the source resource may not be stopped until after
    the target resource has been brought offline.

    0x000A or ForcedDownBy
    Specifies that the source resource must be forced offline in the
    event that either the target resource goes offline unexpectedly or
    the target resource itself is forced offline.

-s  "selection_string"
    Specifies the selection string. If the -s option is specified without the -S
    option, the selection string associated with it will be applied to all
    managed relationships of resources. The selection string must be enclosed
    within either double or single quotation marks. If the selection string
    contains double quotation marks, enclose the entire selection string in
    single quotation marks. For example:
    -s 'Name == "testing"'
    -s 'Name != "test"'
For information on how to specify selection strings, see "Using expressions" on page 93.

-\(s\) Source_string

 Specifies the source selection string. The Source_string is applied to all resources of the resource class specified by the -S option to determine the source of the relationship. The result of the selection may contain one or more resources.

 If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-\(S\) Source_class[Resource_name[Node]]

 Specifies the source resource of the query. This source resource, with any other query that may be specified, will be queried against all defined relationship to find a match. A source resource is identified by the class of the resource (Source_class), the name of the resource (Resource_name), and optionally the node (Node) on which the resource is located. The Source_class, Resource_name and Node must be separated by a colon.

 If the -s option is used to specify a source selection string, Resource_name and Node must not be specified for the -S option.

-\(T\) Writes the command’s trace messages to standard error. For your software-service organization’s use only.

-\(V\) Writes the command’s verbose messages to standard output.

Parameters

Managed_Relation

 Name of the managed relationship to be removed. Multiple relationships can be specified on the command line, but have to be separated by spaces.

Exit Status

Security

 This command requires root authority, or a user ID with appropriate permissions (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide](https://www.ibm.com) section "Setting up non-root security").

Examples

1. To remove a relationship for a resource tester that belongs to resource class IBM.Application, enter:

   \texttt{rmrel -S IBM.Application:tester}
To remove the relationship of a resource by using a selection string, enter:

```
rmrel -s 'Name == "tester"'
```

To remove a relationship for a source resource `foo` from a selection string applied to the class `IBM.Application`, enter:

```
rmrel -s 'Name=="foo"' -S IBM.Application
```

To remove all relationship for source resources from class `IBM.Application`:

```
rmrel -s 'Name like "%"' -S IBM.Application
```

To remove relationship for resources with targets from class `IBM.Application` with a collocated relationship and a specific condition, enter:

```
rmrel -S IBM.Application:narten -G IBM.Application:ha,:test -P collocated -O 1
```

To remove relationships named `narten` and `foo`, enter:

```
rmrel narten foo
```

**Files**

```
/usr/sbin/rsct/bin/rmrel
```

Location of the `rmrel` command.

Name
rmrg – Removes one or more already-defined resource groups.

Synopsis
rmrg [-h] [-i] -s "selection_string" [-T] [-V] [Resource_group ...]
rmrg [-h] [-i] [-T] [-V] Resource_group [...]  

Description
The rmrg command removes one or more resource groups specified by the Resource_group parameter, or that match the specified selection string. The member resources associated with the removed resource groups, are also removed by IBM Tivoli System Automation. If any member of the resource groups to be deleted are part of a managed relationship between resources, the managed relationships are also removed by IBM Tivoli System Automation. The resource group must already exist for it to be removed. If the resource group to be removed is still online, the resource group is not removed.

This implies that all resource groups that are nested within the resource group to be removed are also removed recursively. If you want to prevent contained resource groups from being deleted recursively, proceed as follows:
1. Remove these resource groups as members from the resource group to be removed using the rmrgmbr command.
2. Remove the containing resource group.

When the -h option is specified, this command’s usage statement is written to standard output. All verbose messages are also written to standard output.

All trace messages are written to standard error.

Parameters
Resource_group
The name of the defined resource group to be removed. Multiple resource groups can be specified but must be separated by spaces.

Options
-h    Writes the command’s usage statement to standard output.
-i    Interactive. Prompt before removing relationships.
-s "selection_string"
     Specifies the selection string. If the Resource_group parameters are not specified, the selection string will be applied to all existing resource groups. The selection string must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:
     -s 'Name == "testing"'
     -s 'Name != "test"'
     -s 'Name like "%"' (For all resources)
rmrg

-\(T\)  Writes the command’s trace messages to standard error. For your software-service organization’s use only.
-\(V\)  Writes the command’s verbose messages to standard output.

Security

This command requires root authority, or a user ID with appropriate permissions. (For more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section “Setting up non-root security”).

Examples

1. To remove a resource group called foo, enter:
   ```
   rmrg foo
   ```
2. To remove resource groups called foo, foo1, and foo2, enter:
   ```
   rmrg foo foo1 foo2
   ```
3. To prompt before removing resource groups called foo and foo2, enter:
   ```
   rmrg -i foo foo2
   ```
4. To remove a resource group called foo using a select string, enter:
   ```
   rmrg -s 'Name="foo"'
   ```
5. To remove all resource groups containing the word foo as part of its name, enter:
   ```
   rmrg -s 'Name ?="foo"'
   ```

Files

```
/usr/sbin/rsct/bin/rmrg
```
Location of the rmrg command.

The `rmccli` General Information file
**rmrgmbr**

**Name**

`rmrgmbr` - Removes one or more resources from their resource group.

**Synopsis**

```
rmrgmbr [-h] [-i] [-T] [-V] -g Resource_group

rmrgmbr [-h] [-i] -s [-T] [-V] [-g Resource_group] "selection string"

rmrgmbr [-h] [-i] -s [-T] [-V] [-g Resource_group]
             Resource_class:"selection_string" [Resource_class:"selection_string" [...]]

rmrgmbr [-h] [-i] [-T] [-V] [-g Resource_group]
             Resource_class:Resource_name [:Node][,Resource_name[Node][,...]]
             [Resource_class:Resource_name [:Node][,Resource_name[Node][,...]] [...]]
```

**Description**

The `rmrgmbr` command removes all the member resources of the specified resource group, only the specified member resources of the specified resource group, or the member resources that match the selection string. IBM Tivoli System Automation ensures that the associated relationship and equivalency are also updated, if possible. When the selection string is the only parameter, then it is applied directly to the IBM.ManagedResource class.

A resource name or selection string must be specified with the resource class to which it belongs. The user must input the resource class, resource name, and the node number or name if it is a fixed resource. The resource class and the resource name, the resource name and the node must be separated by a colon.

**Options**

- `-h`  Writes the command’s usage statement to standard output.
- `-i`  Interactive. Prompt before removing relationships.
- `-g Resource_group`
  Specifies the unique name of the resource group from which the member resources are to be removed.
- `-s`  Specifies that a selection string will be used instead of the resource name.
- `-T`  Writes the command’s trace messages to standard error. For your software-service organization’s use only.
- `-V`  Writes the command’s verbose messages to standard output.

**Parameters**

- `Resource_class`
  Specifies the name of the resource class to which the member resource belongs. The resource and the resource class must be separated by the colon (`:`) delimiter.

- `Resource_class:Resource_name[:Node]`
  This specifies one or more member resources that are to be removed from the specified resource group. Resources belonging to different resource
classes can also be specified using this syntax. However, member resources belonging to different classes must be separated by spaces. A member resource is identified by the resource’s class (Resource_class), the resource’s name (Resource_name), and optionally the node (Node) the resource is on. The Resource_class, Resource_Name and Node must be separated by a colon. Resource_class is the name of the resource class the member resource belongs to. Resource_name is the name of the actual member resource in its class. The Node may have to be included when trying to remove a fixed resource from the resource group. The Node and its resource must be separated by the colon (:) delimiter.

Multiple resources belonging to the same resource class can also be specified and are separated by a comma. In this case the first resource or Resource_name[Node] of a resource class must be preceded by the Resource_class it belongs to and it must be separated by the colon (:) delimiter while the remaining resources are separated by a comma. 

Resource_class:Resource_name[Node]
The member resources must exist in the resource group for it to be removed.

Resource_class:“selection_string”
Selection string. The -s option determines this operand. Each selection string must be preceded by a resource class. Resource_class indicates the name of the resource class the selection_string will be applied to. The selection_string and its Resource Class must be separated by the colon (:) delimiter. The specified selection string will be applied to its corresponding resource_class attributes to determine which member resources are to be removed from the resource_group. The selection string must be enclosed within double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

-s 'Name == "testing"'
-s 'Name ?= "test"'
-s 'Name like "%"' (for all resources)

For information on how to specify selection strings, see "Using expressions” on page 93.

Selection_string
Specifies the selection string. The -s option determines this parameter. When this is the only parameter, then the selection string is applied to the member resources. But, when the selection string is included with Resource_group, the selection string will be applied to the member resources that belong to the specified resource group. When each of the selection strings are preceded by a resource class, the specified selection string in this case will be applied to its corresponding Resource_class attributes, to determine which resources are to be removed from the Resource_group. The selection string must be enclosed within either double or single quotation marks. If the selection string contains double quotation marks, enclose the entire selection string in single quotation marks. For example:

-s 'Name == "testing"'
-s 'Name ?= "test"'
-s 'Name like "%"' (for all resources)

For information on how to specify selection strings, see "Using expressions” on page 93.
Exit Status

0 Command has run successfully.
1 Error occurred with RMC.
2 Error occurred with CLI script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred with RMC that was based on faulty command line input.
6 Resource specified was not found.
7 Resource already exists.

Security

This command requires root authority, or a user ID with appropriate permissions
(for more information, see the IBM Tivoli System Automation for Multiplatforms Base
Component Administrator’s and User’s Guide section “Setting up non-root security”).

Examples

1. To remove a member resource tester that belongs to resource class
   IBM.Application from a resource group foo, enter:
   ```bash
   rmrgmbr -g foo IBM.Application:tester
   ```
2. To remove member resources tester, Jfoo, and Dfoo that belong to resource
   class IBM.Application, from resource group foo, enter:
   ```bash
   rmrgmbr -g foo IBM.Application:tester,Jfoo,Dfoo
   ```
3. To remove member resources tester and Jfoo that belong to resource class
   IBM.Application and fixed resource en0 that belongs to class IBM.ServiceIP,
   enter:
   ```bash
   rmrgmbr IBM.Application:tester,Jfoo IBM.ServiceIP:en0
   ```
4. To remove selected member resources of the resource class IBM.Application
   from a resource group foo whose ResourceType is set, enter:
   ```bash
   rmrgmbr -s -g foo IBM.Application:ResourceType==1
   ```
5. To remove all member resources of resource group foo by using a selection
   string, enter:
   ```bash
   rmrgmbr -s 'MemberOf == "foo"'
   ```

Files

```
/usr/sbin/rsct/bin/rmrgmbr
```
Location of the `rmrgmbr` command.

commands.

The `rmccli` General Information file.
Name

samctrl – Sets the IBM Tivoli System Automation control parameters.

Synopsis

samctrl [-h] [-m] [-f] [-T] [-V] [new_activeversion]

[-o ResourceRestartTimeOut] [-T] [-V] [Node [Node [...]]]

Description

The samctrl command sets the default control parameter values for IBM Tivoli System Automation. This command, when used, must change at least one control parameter for IBM Tivoli System Automation.

Options

-e P Enables the TEC (Tivoli Enterprise Console) publisher. Publisher is enabled.

-d P Publisher is disabled. This is the default.

-f Force Migration. It requires the –m option. A force option (–mf) can be specified if user insists to upgrade the code version when the joined IBM Tivoli System Automation daemon count is less than the total defined node count and the installed version number information of the down daemon is lower than the rest of the up daemons.

-h Writes the command’s usage statement to standard output.

-m Migration. This is used to trigger a IBM Tivoli System Automation code version migration complete action.

-M T | F

T (True) Manual mode. Deactivates IBM Tivoli System Automation on the cluster. After deactivation, resources are no longer automated and must be started and stopped manually. State changes of resource groups are not reflected in the operations console, which is why RMC commands must be used to retrieve the current states of the cluster resources.

The option should only be used in test environments. It is useful in situations when the execution of a start or stop command must be avoided at all costs.

F (False) Automation mode (default). Reactivates IBM Tivoli System Automation on the cluster.

-u a | d | r

Specifies that one or more nodes are to be added, removed, or replaced with the excluded list of nodes.

a Adds one or more specified nodes to the excluded list of nodes for control operations.

d Deletes one or more specified nodes from the excluded list of nodes for control operations.
samctrl

  r  Replaces one or more specified nodes with the excluded list of
      nodes for control operations.

  –r Retry_count
      Specifies the default number of retries a control operation can perform
      before the operation is declared as failed.

  –o ResourceRestartTimeout
      Resource Restart Timeout value. Specifies the default timeout value (in
      seconds) before a failed resource is restarted. IBM Tivoli System
      Automation waits for the specified period of time before it restarts the
      resource on another node.

  –t Timeout
      Specifies the default timeout value (in seconds) of a control operation. A
      control operation is declared stalled or failed if the operation is not
      successfully completed within the specified time interval.

  -l Trace_level
      Sets the trace level to control the degree and amount of tracing. The
      maximum value of 255 results in very detailed tracing, while the value 0
      suppresses writing various classes of trace entries.

  –T
      Writes the command’s trace messages to standard error. For your
      software-service organization’s use only.

  –V
      Writes the command’s verbose messages to standard output.

Parameters

  Node  Specifies the name of one or more nodes that will be added, removed or
         replaced with the excluded node list for control operations. The -u option
         and its parameter determines the action required to update the excluded
         node list.

  new_activeversion
      This specifies the desired new active version value for IBM Tivoli System
      Automation. It requires the –m option

Exit Status

  0  Command has run successfully.
  1  Error occurred with RMC.
  2  Error occurred with CLI script.
  3  Incorrect flag on command line.
  4  Incorrect parameter on command line.
  5  Error occurred with RMC that was based on faulty command line input.
  6  Resource specified was not found.
  7  Resource already exists.

Security

  This command requires root authority, or a user ID with appropriate permissions
  (for more information, see the [IBM Tivoli System Automation for Multiplatforms Base
  Component Administrator’s and User’s Guide](#) section "Setting up non-root security").
Examples

1. Set IBM Tivoli System Automation to be in automated mode, with retries at 4, resource restart timeout as 5 seconds.
   `samctrl -M F -r 4 -o 5`
2. Exclude some nodes from IBM Tivoli System Automation Control:
   `samctrl -u a narten jarden varten`
3. Migrate to the latest version possible, enter the following:
   `samctrl -m`
4. To force a migration to the latest version possible, enter the following:
   `samctrl -m -f`

Files

`/usr/sbin/rscet/bin/samctrl` Location of the `samctrl` command.

See Also

The `Issamctrl` command.

The `rmccli` General Information file
Name

samdiag – allows to request detailed information on a resource.

Synopsis

samdiag [-h] [-T] [-V] [-x extra_info] -r Resource_handle
samdiag [-h] [-T] [-V] [-x extra_info] -g Resource_group
samdiag [-h] [-T] [-V] [-x extra_info] -e Engine_name

Description

You can request detailed resource information using this command. You can invoke it on any node where an IBM Tivoli System Automation daemon is active.

Note: The samdiag command provided for Release 1 of IBM Tivoli System Automation could only be executed on the node where the master daemon was running on. So running samdiag on a Release 2 daemon will generate an error if Release 1 and Release 2 daemons coexist in the same cluster, and if the master daemon is on a Release 1 node.

samdiag provides the following information about a specified resource:

- Status
- Dependencies
- Binding constraints
- Outstanding actions
- Flags and exceptions
- Requests and votes
- History
- Variables

Options

-h Write the command’s usage statement to standard output.

-T Write the command’s trace messages to standard error. For your software-service organization’s use only.

-V Write the command’s verbose messages to standard output.

-x extra_info Extra Information. This option requests for extra information on the specified resource. The operand "extra_info" can have the following valid strings:

- reqs requests information.
- votes votes information.
- hist history information.
- vars variable information.
- all all information.
Resource_group
   The name of the resource group. This implies that a resource group is specified.

Resource_handle
   Resource handle. This option implies that a resource handle of a resource is specified.

Engine name
   Engine resource name. This option implies that an engine name of a resource is specified. These are the engine name formats currently in use:
   - Cluster
   - Resource_name/<type>/Resource_class[/Node]

Cluster
   This implies that diagnostic information is requested on the cluster or shared domains known to IBM Tivoli System Automation.

Resource_name/<type>/Resource_class[/Node]
   This is the most commonly used engine name format. Here the engine resource is identified by the resource's name (Resource_name), the <type> of resource, the resource's class (Resource_class), and optionally the node (Node) the resource is on. The Resource_class, Resource_Name and Node must be separated by a forward slash ("/"). Resource_class is the name of the Resource class the resource belongs to. Resource_name is the name of the actual resource in its class. The Node may have to be included when trying to act on a fixed resource. The Node and its resource must be separated by the forward slash or "/" delimiter. The <type> of the resource can be any of the following:
   - ResGroup
     For resource groups.
   - Equivalency
     For equivalencies.
   - Fixed
     For fixed resources.
   - Float
     For floating resources.

Parameters

Resource_class: Resource_name[:Node]
   Member Resources. This specifies one resource that is to be acted on. A resource is identified by the resource's class (Resource_class), the resource's name (Resource_name), and optionally the node (Node) the resource is on. Resource_class, Resource_Name, and Node must be separated by a colon. Resource_class is the name of the Resource class the resource belongs to. Resource_name is the name of the actual resource in its class. The Node may have to be included when trying to act on a fixed resource. The Node and its resource must be separated by the colon or ":" delimiter.

Exit Status

0  Command has run successfully.
1  Error occurred with RMC.
2  Error occurred due to an underlying error in the command script.
3 Incorrect flag on command line.
4 Incorrect parameter on command line.
5 Error occurred due to an user error.
6 Resource specified was not found.

Security
This command requires root authority, or a user ID with appropriate permissions.
(for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide section “Setting up non-root security”).

Files
/usr/sbin/rsct/bin/samdiag Location of the samdiag command.

See Also
The Issamctrl command.

The rmccli General Information file
Name

samlicm – allows to install, list, and upgrade the product license.

Synopsis

samlicm [-h] [-s] [-t] [-i license_file]

Description

The samlicm command installs, lists, and upgrades the product license for IBM Tivoli System Automation. Since every node in the cluster checks for a license, the license has to be installed on every single node in the cluster. Depending on the installation medium a try and buy or full license has already been installed during product installation. Use the samlicm command to check your license status or upgrade a try and by license to a full license.

Options

- h  Writes the command’s usage statement to standard output.
- s  Prints the license status to standard output. Use this option to see when your license expires.
- t  Tests the license. Use this option to check the installed license
- i license_file  Installs or upgrades the product license with the specified license file. Use the –i option for both, the initial license installation and license upgrade.

Exit Status

0  Command has run successfully.
1  Error occurred during command processing.

Security

This command requires root authority.

Examples

1. Install a license or upgrade a license:

   samlicm -i try_buy.lic

   If everything works fine you will not get any output from the command. In case of an error the error message will be written to standard error, and the corresponding exit status is returned.

Files

/usr/sbin/rsct/bin/samlicm  Location of the samlicm command.

See Also

The IBM License Use Management (LUM) documentation.
**sampolicy**

**Name**

`sampolicy` - Checks if the policy in an input file is valid, activates the policy from this file, and deactivates the current policy. Also saves the current policy to a file in XML format and can retrieve the policy information from this file. Chapter 2, “Policy XML reference,” on page 101 describes how to create an XML file.

See “Messages generated by the sampolicy command” on page 173 for messages generated by the sampolicy command.

**Synopsis**

```
sampolicy -h

sampolicy [-T] [-V] -a Filename

sampolicy [-T] [-V] -d

sampolicy [-T] [-V] -s [Filename]

sampolicy [-T] [-V] -c Filename

sampolicy [-T] [-V] -i Filename
```

**Description**

The `sampolicy` command is a Java utility program that will read the IBM Tivoli System Automation XML policy from an XML document file, parse, validate, and send the configuration requests to the RecoveryRM daemon and other referenced RSCT resource managers (e.g. GlobalResRM) within the RSCT Peer Domain. The sampolicy command can also be used to save a snapshot of the current IBM Tivoli System Automation configuration to a XML document file.

**Options**

- `-h` Help. Writes the command’s usage statement to standard output.

- `-T` Trace. Writes the command’s trace messages to standard error. For your software-service organization’s use only.

- `-V` Writes the command’s verbose messages to standard output.

- `-a` Activates the policy from a file.

**Note:** When a new policy gets activated, all existing resources are deleted. This includes the System Automation for Multiplatforms end-to-end automation adapter policy. If needed it must be reactivated by using the Define function of the System Automation for Multiplatforms adapter configuration dialog. This is described in the ‘Configuring the System Automation for Multiplatforms end-to-end automation adapter’ section in the IBM Tivoli System Automation for Multiplatforms Installation and Configuration Guide. You can omit this step if you save the current policy first, then edit the output XML file without changing the resource definitions for the System Automation for Multiplatforms end-to-end automation adapter policy, and finally activate this policy.
sampolicy

-d   Deactivates the current running policy.

   Note: Deactivation deletes all existing resources. This includes the System
   Automation for Multiplatforms end-to-end automation adapter
   policy. If needed it must be reactivated by using the Define function
   of the System Automation for Multiplatforms adapter
   configuration dialog. This is described in the 'Configuring the
   System Automation for Multiplatforms end-to-end automation
   adapter' section in the IBM Tivoli System Automation for
   Multiplatforms Installation and Configuration Guide

-s   Saves the current configuration in XML format to a file.
-c   Checks if the policy in the input file is valid.
-i   Retrieves the policy information from a file.

Parameters

Filename

   Name of the file or absolute path of the file name containing the policy
   XML. Filename is required for the options -a, -c, -i, and optional for the
   option -s. If no filename is provided, the default path is
   /var/ct/[domain-name]/cfg. The default file name is
   sampolicy<month><day><year><time>.xml

Security

   This command requires root authority.

Examples

   1. To activate a policy, enter:
      sampolicy -a /usr/xml/myPolicy.xml
   2. To deactivate a policy, enter:
      sampolicy -d
   3. To save the policy to a file, enter:
      sampolicy -s /usr/xml/currentpolicy.xml

Files

/usr/sbin/rsct/bin/sampolicy   Location of the sampolicy command.

Exit Status

   0   Command completed successfully.
   1   Command parsing failed.
   2   Command processing failed.
   3   Java runtime not found.
samsimul

Name
samsimul – Simulates a series of requests or state changes and displays the expected results.

Synopsis
samsimul [-h][-T][-V] [Input_file_name]

Description
The samsimul command simulates a series of requests against the automation engine or operational state changes of individual resources. If an input file name is given, samsimul reads a description of the requests or state changes to be simulated from the specified file. If the input file name is omitted, samsimul reads that description from standard input.

Upon completion of the simulation, samsimul writes the expected results of the simulated requests or state changes to standard output.

Options
- h  Writes the command’s usage statement to standard output.
- T  Writes the command’s trace messages to standard error. For your software-service organization’s use only.
- V  Writes the command’s verbose messages to standard output.

Parameters
Input_file_name
Specifies the name of a file that contains a description of the requests or state changes to be simulated. Each line of the file describes a single request by means of six space-separated values:
1. The name of the resource or resource group to be started, stopped, canceled, moved, or considered failed, online, or offline.
2. A sequence number denoting the relative point in time when the request would be submitted. Multiple requests with identical sequence numbers would be submitted simultaneously.
3. A priority code stating the relative importance of the request with regard to other requests within the resource structure. Possible values are "low", "high", and "force".
4. An action code denoting the type of request or state change to be simulated by the automation engine. Possible values are "start", "stop", "move", "cancel", "failed", "online", and "offline".
5. An originator code denoting the source of the request. Possible values are "Operator", "ExtSched", and "Automation".
6. A comma-separated list of nodes to which the request or state change applies.

Lines beginning with the "#" character (hash mark) are considered comments instead of request or state change descriptions. These can be used as annotations and are disregarded by samsimul. Empty lines,
samsimul

including those containing only space or tab characters, may be used to visually structure the input file and are disregarded by samsimul.

Security
This command requires root authority, or a user ID with appropriate permissions (for more information, see the IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide section "Setting up non-root security").

Exit Status
0    Command has run successfully.
1    Error occurred with RMC.
2    Error occurred with CLI script.
3    Incorrect flag on command line.
4    Incorrect parameter on command line.
5    Error occurred with RMC that was based on faulty command line input.

Examples
1. To simulate a resource start and subsequent failure, enter:
   samsimul
   IBM.ResourceGroup:samba 0 high start Operator node
   IBM.Application:samba:samba1 1 high failed Operator node
2. To simulate the sequence of requests and state changes described in the file
   input_file_name, enter:
   samsimul input_file_name

Files
/usr/sbin/rsct/bin/samsimul     Location of the samsimul command.

The Resource_Data_Input file
**uninstallSAM**

**Name**

uninstallSAM – Uninstalls all components of the Base component of IBM Tivoli System Automation.

**Synopsis**

uninstallSAM [-d inst_pkg_dir] [-l log_file]

**Description**

The uninstallSAM command checks that the domain is offline and cancels the uninstallation if it is online, uninstalls all components of the Base component of IBM Tivoli System Automation in the proper order, and records information about the performed actions in a log file. The name of the default log file is /tmp/uninstallSAM.<#>.log, where <#> is a sequential number; the highest number identifies the most recent log file.

Typically, no options need to be specified. The available options allow you to uninstall the component although the uninstallSAM script is not in the package directory (-d) and to specify that a log file other than the default is to be used (-l).

**Options**

- **-d inst_pkg_dir**
  Allows you to perform the uninstallation based on NLS files in the specified directory although the uninstallSAM script is not available in the directory. uninstallSAM is not dependent upon the packages to be installed, but needs the directory for its message files.

- **-l log_file**
  Logs information generated by the uninstallSAM command to the specified log file.

**Exit Status**

0  The uninstallation completed successfully.
1  <package uninstaller> returned a return code other than 0; the return code and the corresponding message can be found in the log file. <package uninstaller> is:
   - AIX: installp
   - Linux: rpm
2  The peer domain is online. No uninstallation was performed.
3  uninstallSAM was unable to continue because directories or files could not be detected. This return code also applies if the -d option specifies a directory that does not exist, or if the subdirectory with files does not exist.

**Security**

This command requires root authority.
Using Expressions

Using expressions

The information in this section is for advanced users who want to:
• Modify predefined expressions.
• Select resources.
• Filter audit log records by compiling and running a complex mathematical expression against a set of values.

Permissible data types, operators, and operator order of precedence are described below. RMC uses these functions to match a selection string against the persistent attributes of a resource and to implement the evaluation of an event expression or a rearm expression.

An expression is similar to a C language statement or the WHERE clause of an SQL query. It is composed of variables, operators, and constants. The C and SQL syntax styles may be intermixed within a single expression. The following table relates the RMC terminology to SQL terminology:

<table>
<thead>
<tr>
<th>RMC</th>
<th>SQL</th>
</tr>
</thead>
<tbody>
<tr>
<td>attribute name</td>
<td>column name</td>
</tr>
<tr>
<td>select string</td>
<td>WHERE clause</td>
</tr>
<tr>
<td>operators</td>
<td>predicates, logical connectives</td>
</tr>
<tr>
<td>resource class</td>
<td>table</td>
</tr>
</tbody>
</table>

SQL Restrictions

SQL syntax is supported for selection strings, with the following restrictions:
• Only a single table may be referenced in an expression.
• Queries may not be nested.
• The IS NULL predicate is not supported because there is no concept of a NULL value.
• The period (.) operator is not a table separator (for example, table.column). Rather, in this context, the period (.) operator is used to separate a field name from its containing structure name.
• The pound sign (#) is hard-coded as the escape character within SQL pattern strings.
• All column names are case-sensitive.
• All literal strings must be enclosed in either single or double quotation marks. Bare literal strings are not supported because they cannot be distinguished from column and attribute names.

Supported Base Data Types

The term variable is used in this context to mean the column name or attribute name in an expression. Variables and constants in an expression may be one of the following data types that are supported by the RMC subsystem:

<table>
<thead>
<tr>
<th>Symbolic Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CT_INT32</td>
<td>Signed 32-bit integer</td>
</tr>
<tr>
<td>CT_UINT32</td>
<td>Unsigned 32-bit integer</td>
</tr>
<tr>
<td>CT_INT64</td>
<td>Signed 64-bit integer</td>
</tr>
</tbody>
</table>
Using Expressions

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CT_UINT64</td>
<td>Unsigned 64-bit integer</td>
</tr>
<tr>
<td>CT_FLOAT32</td>
<td>32-bit floating point</td>
</tr>
<tr>
<td>CT_FLOAT64</td>
<td>64-bit floating point</td>
</tr>
<tr>
<td>CT_CHAR_PTR</td>
<td>Null-terminated string</td>
</tr>
<tr>
<td>CT_BINARY_PTR</td>
<td>Binary data – arbitrary-length block of data</td>
</tr>
<tr>
<td>CT_RSRC_HANDLE_PTR</td>
<td>Resource handle – an identifier for a resource</td>
</tr>
</tbody>
</table>

Structured Data Types

In addition to the base data types, aggregates of the base data types may be used as well. The first aggregate data type is similar to a structure in C in that it can contain multiple fields of different data types. This aggregate data type is referred to as structured data (SD). The individual fields in the structured data are referred to as structured data elements, or simply elements. Each element of a structured data type may have a different data type which can be one of the base types in the preceding table or any of the array types discussed in the next section, except for the structured data array.

The second aggregate data type is an array. An array contains zero or more values of the same data type, such as an array of CT_INT32 values. Each of the array types has an associated enumeration value (CT_INT32_ARRAY, CT_UINT32_ARRAY). Structured data may also be defined as an array but is restricted to have the same elements in every entry of the array.

Data Types That Can Be Used for Literal Values

Literal values can be specified for each of the base data types as follows:

**Array**

An array or list of values may be specified by enclosing variables or literal values, or both, within braces {} or parentheses () and separating each element of the list with a comma. For example: \{ 1, 2, 3, 4, 5 \} or \"abc", "def", "ghi"\).

Entries of an array can be accessed by specifying a subscript as in the C programming language. The index corresponding to the first element of the array is always zero; for example, List[2] references the third element of the array named List. Only one subscript is allowed. It may be a variable, a constant, or an expression that produces an integer result. For example, if List is an integer array, then List[2]+4 produces the sum of 4 and the current value of the third entry of the array.

**Binary Data**

A binary constant is defined by a sequence of hexadecimal values, separated by white space. All hexadecimal values comprising the binary data constant are enclosed in double quotation marks. Each hexadecimal value includes an even number of hexadecimal digits, and each pair of hexadecimal digits represents a byte within the binary value. For example: \"0xabcd 0x01020304050607090a0b0c0d0e0f1011121314\"

**Character Strings**

A string is specified by a sequence of characters surrounded by single or double quotation marks (you can have any number of characters, including none). Any character may be used within the string except the null \"\" character. Double quotation marks and backslashes may be included in strings by preceding them with the backslash character.
Using Expressions

Floating Types
These types can be specified by the following syntax:
• A leading plus (+) or minus (-) sign
• One or more decimal digits
• A radix character, which at this time is the period (.) character
• An optional exponent specified by the following:
  – A plus (+) or minus (-) sign
  – The letter ‘E’ or ‘e’
  – A sequence of decimal digits (0–9)

Integer Types
These types can be specified in decimal, octal, or hexadecimal format. Any value that begins with the digits 1–9 and is followed by zero or more decimal digits (0–9) is interpreted as a decimal value. A decimal value is negated by preceding it with the character ‘-’. Octal constants are specified by the digit 0 followed by 1 or more digits in the range 0–7. Hexadecimal constants are specified by a leading 0 followed by the letter x (uppercase or lowercase) and then followed by a sequence of one or more digits in the range 0–9 or characters in the range a–f (uppercase or lowercase).

Resource Handle
A fixed-size entity that consists of two 16-bit and four 32-bit words of data. A literal resource handle is specified by a group of six hexadecimal integers. The first two values represent 16-bit integers and the remaining four each represent a 32-bit word. Each of the six integers is separated by white space. The group is surrounded by double quotation marks. The following is an example of a resource handle:
"0x4018 0x0001 0x00000000 0x0069684c 0x00519686 0xaf7060fc"

Structured Data
Structured data values can be referenced only through variables. Nevertheless, the RMC command line interface displays structured data (SD) values and accepts them as input when a resource is defined or changed. A literal SD is a sequence of literal values, as defined in "Data Types That Can Be Used for Literal Values" on page 94, that are separated by commas and enclosed in square brackets. For example, ['abc',1,[3,4,5]] specifies an SD that consists of three elements: (a) the string ‘abc’, (b) the integer value 1, and (c) the three-element array [3,4,5].

Variable names refer to values that are not part of the expression but are accessed while running the expression. For example, when RMC processes an expression, the variable names are replaced by the corresponding persistent or dynamic attributes of each resource.

The elements of a structured data value can be accessed by using the following syntax:
<variable name>[<element name>]

For example, a.b

The variable name is the name of the table column or resource attribute, and the element name is the name of the element within the structured data value. Either or both names may be followed by a subscript if the name is an array. For example, a[10].b refers to the element named b of the 11th entry of the structured data array called a. Similarly, a[10].b[3]
Using Expressions

refers to the fourth element of the array that is an element called b within the same structured data array entry a[10].

How Variable Names Are Handled

Variable names refer to values that are not part of an expression but are accessed while running the expression. When used to select a resource, the variable name is a persistent attribute. When used to generate an event, the variable name is a dynamic attribute. When used to select audit records, the variable name is the name of a field within the audit record.

A variable name is restricted to include only 7-bit ASCII characters that are alphanumeric (a-z, A-Z, 0-9) or the underscore character (_). The name must begin with an alphabetic character. When the expression is used by the RMC subsystem for an event or a rearm event, the name can have a suffix that is the '@' character followed by 'P', which refers to the previous observation.

Operators That Can Be Used in Expressions

Constants and variables may be combined by an operator to produce a result that in turn may be used with another operator. The resulting data type or the expression must be a scalar integer or floating-point value. If the result is zero, the expression is considered to be FALSE; otherwise, it is TRUE.

Note: Blanks are optional around operators and operands unless their omission causes an ambiguity. An ambiguity typically occurs only with the word form of operator (that is, AND, OR, IN, LIKE, etc.). With these operators, a blank or separator, such as a parenthesis or bracket, is required to distinguish the word operator from an operand. For example, aANDb is ambiguous. It is unclear if this is intended to be the variable name aANDb or the variable names a, b combined with the operator AND. It is actually interpreted by the application as a single variable name aANDb. With non-word operators (for example, +, -, =, &&, etc.) this ambiguity does not exist, and therefore blanks are optional.

The set of operators that can be used in strings is summarized in the following table:

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
<th>Left Data Types</th>

<td>Result is true (1) or false (0)</td>
</tr>
</tbody>
</table>

**Default Precedence of Operators**

When integers of different signs or size are operands of an operator, standard C style casting is implicitly performed. When an expression with multiple operators is evaluated, the operations are performed in the order defined by the precedence of the operator. The default precedence can be overridden by enclosing the portion or portions of the expression to be evaluated first in parentheses ()

For example, in the expression "1+2*3", multiplication is normally performed before addition to produce a result of 7. To evaluate the addition operator first, use parentheses as follows: "(1+2)*3". This produces a result of 9. The default precedence rules are shown in the following table. All operators in the same table cell have the same or equal precedence.

<table>

</tbody>
</table>
Using Expressions

Pattern Matching

Two types of pattern matching are supported; extended regular expressions and that which is compatible with the standard SQL LIKE predicate. This type of pattern may include the following special characters:

- The percentage sign (%) matches zero or more characters.
- The underscore (_) matches exactly one character.
- All other characters are directly matched.
- The special meaning for the percentage sign and the underscore character in the pattern may be overridden by preceding these characters with an escape character, which is the pound sign (#) in this implementation.

Examples of Expressions

Some examples of the types of expressions that can be constructed follow:

1. The following expressions match all rows or resources that have a name which begins with 'tr' and ends with '0', where 'Name' indicates the column or attribute that is to be used in the evaluation:
   
   ```
   Name =.'tr.*0'
   Name LIKE 'tr%0'
   ```

2. The following expressions evaluate to TRUE for all rows or resources that contain 1, 3, 5, 6, or 7 in the column or attribute that is called IntList, which is an array:

   ```
   IntList<[1,3,5..7]
   IntList in (1,3,5..7)
   ```

3. The following expression combines the previous two so that all rows and resources that have a name beginning with 'tr' and ending with '0' and have 1, 3, 5, 6, or 7 in the IntList column or attribute will match:

   ```
   (Name LIKE "tr%0")&&((IntList<[1,3,5..7])
   (Name='tr.*0') AND (IntList IN [1,3,5..7])
   ```

Coding for XML policy

When specifying expressions in an XML file which may be used as input for the sampolicy command, some characters shown in the following table must be specified in such a way that they are treated as operators instead as XML control characters.

<table>
<thead>
<tr>
<th>Character</th>
<th>specified in XML like</th>
</tr>
</thead>
<tbody>
<tr>
<td>&amp;</td>
<td>&amp;</td>
</tr>
<tr>
<td>&lt;</td>
<td>&lt;</td>
</tr>
<tr>
<td>&gt;</td>
<td>&gt;</td>
</tr>
</tbody>
</table>
Chapter 2. Policy XML reference

This chapter describes the XML elements, sub-elements, and attributes that are supported for base component automation policies. The following table shows in which version of IBM Tivoli System Automation for Multiplatforms particular XML elements became available.

Table 2. Availability of XML elements by product version

<table>
<thead>
<tr>
<th>XML element</th>
<th>First supported in IBM Tivoli System Automation for Multiplatforms version</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;IBM.AgFileSystemAttributes&gt;</td>
<td>2.2.0.1</td>
</tr>
<tr>
<td>IBM.AgFileSystem as class value</td>
<td>2.2.0.1</td>
</tr>
<tr>
<td>&lt;ClassAttributesReference&gt; as sub-element of &lt;ConstituentResource&gt;</td>
<td>2.2.0.1</td>
</tr>
<tr>
<td>All other tags</td>
<td>2.1</td>
</tr>
</tbody>
</table>

In this chapter, the following information is provided for each XML element that is currently supported:

Name      The name and a short description of the element.
Examples  One or more examples showing how the element is used.
Attributes Descriptions of the element’s attributes.
Sub-element The name and a short description of the sub-element.
Occurrence The possible number occurrences of the element.

Note that when specifying expressions in an XML file which may be used as input for the sampolicy command, some characters must be specified in such a way that they are treated as operators and not as XML control characters. These characters are shown in Table 1 on page 100.

When you create an XML file, it is recommended to use the official XML policy file template SAMTemplate.xml located in the /usr/sbin/rsct/samples/policy directory. To use the template, copy the file to your working directory and rename it according to your file naming conventions.

To create an XML policy file, you can use any commercial, shareware, or free-ware XML or ASCII editor that allows you to save the file in UTF-8 format. XML files in any other format will be rejected by the policy checker.

If you use an XML editor to create the XML policy file, the editor will create the basic XML policy template for you. Additionally, most XML editors have a validation function that ensures that your XML code conforms to the relevant schema. When you want to use these functions, you must ensure that the XML editor knows where to find the relevant schema. The schema for the base component policy is defined in the files SAMPolicy.xsd and SAMSimpleTypes.xsd. They are located in the directory /usr/sbin/rsct/samples/policy.
AutomationPolicy

The AutomationPolicy element is the starting element of the XML policy definition and encompasses all other elements.

Example

```xml
<AutomationPolicy productID="SAM" version="2.2"
 xmlns="http://www.ibm.com/TSA/Policy.xsd"
 xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:schemaLocation="http://www.ibm.com/TSA/Policy.xsd SAMPolicy.xsd ">
 <PolicyInformation>
  <PolicyName>First SAFMP policy</PolicyName>
  <AutomationDomainName>lnxcluster</AutomationDomainName>
  <PolicyToken>1.1.1</PolicyToken>
  <PolicyDescription>this is the description of the policy
  ------ 2006 02/23 andersen initial version ------
  </PolicyDescription>
  <PolicyAuthor>Peter Andersen</PolicyAuthor>
 </PolicyInformation>
 ...
 ...
</AutomationPolicy>
```

Attributes

- **version**: Mandatory. It identifies the minimum version of IBM Tivoli System Automation which is required to apply this policy XML. The maximum number of characters supported is 32.
- **xmlns**: Mandatory, fixed value, "http://www.ibm.com/TSA/Policy.xsd". It identifies the default name space for the XML schema.
- **xmlns:xsi**: Mandatory, fixed value, "http://www.w3.org/2001/XMLSchema-instance". It identifies the XML schema format for this policy XML.
- **product ID**: Mandatory, fixed value, "SAM". It identifies the kind of policy contained in the AutomationPolicy element.

Sub-elements

The sub-elements listed here are described later in this chapter.

- PolicyInformation
- ControlInformation
- Resource
- MoveGroup
- ConstituentResource
- ResourceGroup
- Relationship
- Equivalency
- ResourceReference
- IBM.AgFileSystemAttributes
- IBM.ApplicationAttributes
- IBM.ServiceIPAttributes
- IBM.TestAttributes
- IBM.TieBreaker
Policy Information

Mandatory element. The PolicyInformation element uses the sub-elements listed in the following to provide an identification of the policy.

Example

```xml
<PolicyInformation>
  <PolicyName> First SAFMP Policy </PolicyName>
  <AutomationDomainName> Friendly </AutomationDomainName>
  <PolicyToken> 1.0.1 </PolicyToken>
  <PolicyAuthor> Michael Atkins </PolicyAuthor>
  <PolicyDescription>
    This document contains the policy for Friendly Domain.
    Change History:
    ________________________________
    Date Name Description
    ________________________________
    01/12/05 Michael Atkins Initial Policy
    ________________________________
  </PolicyDescription>
</PolicyInformation>
```

Attributes

None.

Sub-elements

- **PolicyName**  Mandatory. Assigns a name to the policy.
- **AutomationDomainName**  Mandatory. Specifies the IBM Tivoli System Automation for Multiplatforms cluster name to which this policy applies.
- **PolicyToken**  Mandatory. Versioning tag defined by the user.
- **PolicyAuthor**  Optional. Shows the name of the policy’s author.
- **PolicyDescription**  Optional. It may, for example, contain comments like the purpose of the policy XML.

Occurrence

Once.
ControlInformation

Optional element. For the base component of IBM Tivoli System Automation it sets the control parameters shown under Sub-Elements. It sets the same parameters as in the samctrl command (see "samctrl” on page 81).

Example

```xml
<ControlInformation>
  <Timeout>20</Timeout>
  <RetryCount>5</RetryCount>
  <ExcludedNode>lnxxdr33</ExcludedNode>
  <ExcludedNode>lnxxdr34</ExcludedNode>
  <ResourceRestartTimeout>30</ResourceRestartTimeout>
  <EnablePublisher>TEC</EnablePublisher>
  <EnablePublisher>XDR</EnablePublisher>
</ControlInformation>
```

Attributes

None.

Sub-elements

- **Timeout**  
  Optional. It specifies the default timeout interval for IBM Tivoli System Automation control operations in seconds. Valid values are numbers from 1 to 360. The default value for this element is 60.

- **RetryCount**  
  Optional. It specifies the default number of retries an IBM Tivoli System Automation control operation can perform before it is treated as failed. Valid values are numbers between 1 and 10. The default is 3.

- **ExcludedNode**  
  Optional. It specifies one entry of the list of excluded nodes. This element may occur multiple times. Its maximum number of characters is 256.

- **ResourceRestartTimeout**  
  Optional. It specifies the timeout in seconds before a failed resource is restarted. Its default is 5 and the allowed values are 2 to 360.

- **EnablePublisher**  
  Optional. It specifies one entry of the list of enabled publishers. It may occur multiple times and its maximum number of characters is 64.

Occurrence

0 to 1.
Resource

Optional element. It describes fixed resources. It is referenced from the elements ResourceGroup, Equivalency, or Relationship.

Example

```xml
<Resource name="xdrerpdlnxdr31" class="IBM.Application" node="lnxxdr31">
  <ClassAttributesReference>
    <IBM.ApplicationAttributes name="Application1"/>
  </ClassAttributesReference>
</Resource>
```

Attributes

- **name**: Mandatory, user defined. It has a maximum of 64 characters.
- **node**: Mandatory. Name of the node on which the resource runs. It has a maximum of 256 characters.
- **class**: Mandatory. It can be one of the values IBM.AgFileSystem, IBM.Application, IBM.ServiceIP, or IBM.Test.

These attributes make up an unique key. The ResourceGroup element must use this key to refer to the resource.

Sub-elements

- **ClassAttributesReference**: Mandatory. It contains the name of the IBM.AgFileSystemAttributes, IBM.ApplicationAttributes, IBM.ServiceIPAttributes, or IBM.TestAttributes element whose attribute values are to be used for the resource.

Occurrence

Multiple times.
MoveGroup

Optional element. It describes floating resources within the IBM Tivoli System Automation environment.

Example

```xml
<MoveGroup name="DB2" class="IBM.Application">
  <ClassAttributesReference>
    <IBM.ApplicationAttributes name="Application2"/>
  </ClassAttributesReference>
  <Members>
    <ConstituentResource name="DB2" class="IBM.Application" node="lnxdr10"/>
    <ConstituentResource name="DB2" class="IBM.Application" node="lnxdr11"/>
  </Members>
</MoveGroup>
```

Attributes

- **name**
  Mandatory, user defined. It identifies the floating resource and has a maximum of 64 characters. It must be equal to the names of the ConstituentResource elements.

- **class**
  Mandatory. It can be one of the values IBM.AgFileSystem, IBM.Application, IBM.Test, or IBM.ServiceIP.

These attributes make up the unique key of a move group. A Relationship element must use this key to refer to this move group.

Sub-elements

- **ClassAttributesReference**
  Optional. It contains the name of the IBM.AgFileSystemAttributes, IBM.ApplicationAttributes, IBM.ServiceIPAttributes, or IBM.TestAttributes element whose attribute values are to be used for those constituents of the move group that do not have their own ClassAttributesReference.

  The element has a maximum of 64 characters.

- **Members**
  Optional. Members elements can only be constituent resources (see the "ConstituentResource" on page 107 element).

Occurrence

0 to multiple times.
**ConstituentResource**

Optional element. It must be used to describe members of a MoveGroup (floating resources).

**Examples**

Example 1:

```xml
<ConstituentResource name="DB2" class="IBM.Application" node="lnxxdr10"/>
```

Example 2:

```xml
<ConstituentResource name="xdrerpdlnxxdr31" class="IBM.Application" node="lnxxdr31">
  <ClassAttributesReference>
    <IBM.ApplicationAttributes name="Application1"/>
  </ClassAttributesReference>
</ConstituentResource>
```

**Attributes**

- **name**: Mandatory, user defined. It must be equal to the name of the MoveGroup element as shown in the example section of the MoveGroup element description. It has a maximum number of 64 characters.

- **node**: Mandatory. Name of the node on which the resource runs. It has maximum number of 256 characters.

- **class**: Mandatory. It can be one of the values IBM.AgFileSystem, IBM.Application, IBM.Test, or IBM.ServiceIP.

These attributes make up the unique key of a constituent resource. A MoveGroup element must use this key to refer to the resource.

**Sub-elements**

- **ClassAttributesReference**: Optional. It contains the name of the IBM.AgFileSystemAttributes, IBM.ApplicationAttributes, IBM.ServiceIPAttributes, or IBM.TestAttributes element whose attribute values are to be used for the constituent resource.

  The element must be specified when no ClassAttributesReference element is referenced in the constituent's MoveGroup, or to override the attribute settings in the move group's ClassAttributesReference element for the constituent resource.

  The element has a maximum of 64 characters.

**Occurrence**

0 to multiple times.
ResourceGroup

Optional element. It describes groups of resources within the IBM Tivoli System Automation environment.

Example

```xml
<ResourceGroup class="IBM.ResourceGroup" name="erpdgroup">
  <DesiredState>Online</DesiredState>
  <InfoLink>www.ibm.com/TSA/xDR</InfoLink>
  <Priority>100</Priority>
  <Members>
    <Resource name="xdrerpd" class="IBM.Application" node="lnxxdr31" mandatory="true"/>
  </Members>
</ResourceGroup>
```

Attributes

- **name**: Mandatory, user defined. It identifies the groups of resources and has a maximum of 64 characters.
- **class**: Mandatory. It has the fixed value IBM.ResourceGroup.

These attributes make up the unique key of a resource group. A Relationship element must use this key to refer to this resource group.

Sub-elements

- **DesiredState**: Optional. Defines the operation state the resource should obtain in the end. IBM Tivoli System Automation for Multiplatforms tries to bring up and keep all resources in a resource group to this state. Valid states are:
  - Offline: the resource should be stopped (This is the default value).
  - Online: the resource should be started.

- **Description**: Optional. Provides more information about the resource. See "Description" on page 122 for details about the Description element.

- **Owner**: Optional. Provides the name of the resource owner. See "Owner" on page 122 for details about the Owner element.

- **InfoLink**: Optional. Provides a link where more information can be found. See "InfoLink" on page 123 for details about the InfoLink element.

- **Members**: Optional. Members can be resources, resource references (only if the referenced resources are of class IBM.AgFileSystem), resource groups, or move groups. See "Members" on page 121 for details about the Members element.

- **MemberLocation**: Optional. It specifies the default location of resources in the resource group. Allowed values are None and Collocated. Collocated is the default.

- **Priority**: Optional. It specifies the priority of this resource group in relation to other resource groups. This sub-element is used to resolve conflicts. Its default is 0 and the allowed values are 0 to 200.

- **AllowedNode**: Optional. It specifies the set of nodes the resources of a resource
Policy XML reference

group are allowed to run on. Allowed values are All, a name of
one node or the name of an equivalency of nodes. All is the
default.

ExcludedNode

Optional. It specifies one entry of the list of excluded nodes. This
element may occur up to n times. Its maximum number of
characters is 256.

Occurrence

0 to multiple times.
Policy XML reference

Relationship

Optional element. It describes the relationships between resources in a cluster.

Examples

```
<Relationship>
  <Source>
    <MoveGroup name="movegroupname" class="IBM.Application"/>
  </Source>
  <Target>
    <Resource name="resource1" class="IBM.Application" node="node1"/>
  </Target>
  <Type>StartAfter</Type>
</Relationship>

<Relationship>
  <Source>
    <ResourceGroup name="resourcegroup2" class="IBM.ResourceGroup"/>
  </Source>
  <TargetClass>IBM.Application</TargetClass>
  <TargetSelectString>ResourceType==1</TargetSelectString>
  <Type>Collocated</Type>
</Relationship>
```

Attributes

name Optional. Not required as the Relationship element may not be referenced by any other XML element. However, if there are several managed relationships with the same source resource, then it is recommended to specify a name for the managed relationship. Otherwise the relationships will be consolidated into one managed relationship after a policy save and restore action.

It has a maximum of 64 characters.

Sub-elements

Type Mandatory. Describes the relationships used for defining the start/stop behaviors and the location relationships. For details, refer to the description of the `mkrel` command on page 53

Condition Optional. Can be specified for all location relationships except IsStartable. The IfPossible condition is only valid for relationships of type StartAfter. For a detailed description of the conditions, refer to the description of the `mkrel` command on page 53

Source Optional. A Relationship element must contain a source which can be specified either by naming a specific source resource or by specifying a selection. The source resource can be specified by this Source element.

The source of a relationship may be a fixed resource, resource group, or move group. The Source resource must be a member of a resource group.

The selection can be specified by using the sub-elements SourceClass and SourceSelectString described further down in this list.

SourceClass Optional. It is mutually exclusive with Source and it is required with SourceSelectString. It has a maximum number of 64 characters.
Policy XML reference

SourceSelectString
Optional. It is mutually exclusive with Source and it is required with SourceClass. It has a maximum number of 1024 characters.

Target
Optional. A Relationship element must contain a Target which can either be specified by naming one target resource or by specifying a selection. The target resource can be specified by this Target sub-element. Target may be a fixed resource, a resource group, a resource reference, a move group, or an equivalency. The selection can be specified by using the sub-elements TargetClass and TargetSelectString described further down in this list.

TargetClass
Optional. It is mutually exclusive with Target and it is required with TargetSelectString. It has a maximum number of 64 characters.

TargetSelectString
Optional. It is mutually exclusive with Target and it is required with TargetClass. It has a maximum number of 1024 characters.

Occurrence
0 to multiple times.
**Policy XML reference**

---

**Equivalency**

Optional element. It describes a collection of resources providing the same functionality. An equivalency consists of a set of fixed resources from the same resource class.

**Example**

```xml
<Equivalency name="NetworkInterfaces" class="IBM.Equivalency">
  <Members>
    <ResourceReference name="Ref-eth0-lnxxdr01"/>
    <ResourceReference name="Ref-eth0-lnxxdr02"/>
    <ResourceReference name="Ref-eth0-lnxxdr03"/>
  </Members>
  <MinimumNecessary>2</MinimumNecessary>
</Equivalency>

<Equivalency name="DynamicNI" class="IBM.Equivalency">
  <DynamicSelectString>Name like "eth%"</DynamicSelectString>
  <MemberClass>IBM.NetworkInterface</MemberClass>
  <MinimumNecessary>3</MinimumNecessary>
</Equivalency>
```

**Attributes**

- **name**: Mandatory, user defined. The string in this attribute identifies the Equivalency element. It has maximum number of 64 characters.
- **class**: Mandatory. It has the fixed value IBM.Equivalency.

These attributes make up the unique key of an equivalency. A Relationship element must use this key to refer to this equivalency.

**Sub-elements**

- **MemberClass**: Optional. The MemberClass element determines the class of all members of the equivalency. It is mutually exclusive with the Members element. It is required with the elements DynamicSelectString and StaticSelectString. MemberClass has a maximum number of 64 characters.

- **DynamicSelectString**: Optional. It is mutually exclusive with the element Members and StaticSelectString, and it is required with the element MemberClass if no StaticSelectString is specified. It dynamically determines which resources are contained within the Equivalency. If matching resources are created after the Equivalency has been created, they are dynamically added to the Equivalency. Maximum number of characters supported is 1024.

- **StaticSelectString**: Optional. It is mutually exclusive with the elements Members and DynamicSelectString and is required with the element MemberClass if no DynamicSelectString is specified. It determines which resources are contained within the Equivalency. Maximum number of characters supported is 1024. For more information on how to specify select strings, see the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator's and User's Guide](#).

- **Members**: Optional. Specifies a fixed resource or a resource reference multiple times.
times. It is mutually exclusive with the elements MemberClass, StaticSelectString and DynamicSelectString. See "Members" on page 121.

MinimumNecessary
Optional. It specifies the minimum necessary number of members to make an equivalency valid. The default is 1. Valid numbers are from 0 to 100.

SelectFromPolicy
Optional. Specifies the policy to be used when making a selection from the Equivalency element. Allowed values are Ordered and Any:
- The default value is Any. "Any" means no specific order.
- Ordered means that the selection starts at the beginning. Ordered may not be used together with DynamicSelectString.

Additional, optional values are Failback, NoFailure and NoControl:
- They can only be used in conjunction with the value Any or Ordered.
- Failback means that the resources are always started on the first member, if it is available. The value Failback can only be used in conjunction with the value Ordered.
- When the value NoFailure is specified, the OpState of resources that have a dependency against the equivalency will not be forced to Failed Offline, if they could not be started within the specified timeout interval.
- NoControl means that System Automation will neither start nor stop the members of the equivalency but only react to changes of the OpState of these resources.

The optional additional values are specified like this:
<SelectFromPolicy>Any,NoControl</SelectFromPolicy>
<SelectFromPolicy>Ordered,Failback,NoControl</SelectFromPolicy>

Occurrence
0 to multiple times.
ResourceReference

Optional element. It is used for resources that are outside the management scope of IBM Tivoli System Automation for Multiplatforms, for example, RSCT resources like IBM.NetworkInterface, or automatically harvested resources of the class IBM.AgFileSystem.

Example

```
<ResourceReference name="eth0">
  <ReferencedResource>
    <Name>eth0</Name>
    <Class>IBM.NetworkInterface</Class>
    <Node>lnxxdr01</Node>
  </ReferencedResource>
</ResourceReference>
```

Attributes

name  Mandatory. The string in this attribute identifies the ResourceReference element. It must be unique and has a maximum of 64 characters. A Relationship or Equivalency element must use this name to refer to the resource.

Sub-elements

ReferencedResource

Mandatory. Describes a resource outside this XML. It consists of these elements:

Name  Mandatory. It specifies the actual name of the resource. It has a maximum number of 64 characters.

Node  Mandatory. It specifies the location of the resource. It has a maximum number of 256 characters.

For floating resources, the Node element is empty.

Class  Mandatory. It describes the type of the resource. It has a maximum number of 64 characters

Occurrence

0 to multiple times.
IBM.AgFileSystemAttributes

Optional element. The element is used to specify the attribute values for user-defined storage resources of class IBM.AgFileSystem. An IBM.AgFileSystemAttributes element can be referenced in multiple Resource, ConstituentResource, or MoveGroup elements to assign the attributes values to the resources.

Note that automatically harvested file system resources can only be specified as referenced resources in ResourceReference elements and that their attributes cannot be set in a policy.

Example

```xml
<IBM.AgFileSystemAttributes name="FileSystem1">
  <DeviceName>/dev/sda3</DeviceName>
  <Vfs>ext2</Vfs>
  <MountPoint>/nfs-mount</MountPoint>
  <PreOnlineMethod>0</PreOnlineMethod>
</IBM.AgFileSystemAttributes>
```

Attributes

- **name**  Mandatory. Must be unique and can have a maximum of 64 characters.

  The name can be used in one or multiple Resource, ConstituentResource, or MoveGroup elements to assign the values defined in the particular IBM.AgFileSystemAttributes element to these resources. The name is only used in XML policy handling, not as an actual name within the cluster.

Sub-elements

The sub-elements listed below can be used to set the attribute values for user-defined IBM.AgFileSystem resources. For a detailed description of the attributes, see the *RSCT Administration Guide, SA22-7889*.

- **DeviceName**  Mandatory. String value. It has a maximum of 1024 characters.
- **Vfs**  Mandatory. String value. It has a maximum of 1024 characters.
- **MountPoint**  Optional. String value. It has a maximum of 1024 characters.
- **PreOnlineMethod**  Optional. Integer value between 0 and 3. Default is 0.
- **ProtectionMode**  Optional. Allowed values are 0 and 1. Default is 1.

Occurrence

0 to multiple times.
Policy XML reference

**IBM.ApplicationAttributes**

Optional element. It is used to specify the attributes of a resource of the class IBM.Application.

**Example**

```xml
<IBM.ApplicationAttributes name="Application1">
  <StartCommand>/usr/sbin/rsct/bin/xdrstarterpd</StartCommand>
  <StopCommand>/usr/sbin/rsct/bin/xdrstoperd</StopCommand>
  <MonitorCommand>/usr/sbin/rsct/bin/xdmmonitorerd</MonitorCommand>
  <StartCommandTimeout>10</StartCommandTimeout>
  <StopCommandTimeout>10</StopCommandTimeout>
  <RunCommandsSync>0</RunCommandsSync>
  <UserName>root</UserName>
</IBM.ApplicationAttributes>
```

**Attributes**

- **name**   Mandatory. Must be unique and has a maximum of 64 characters. A Resource, ConstituentResource, or MoveGroup element can refer to this name.

**Sub-elements**

See the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide](#) for a detailed description of the following elements.

- **StartCommand**   Mandatory. String value. It has a maximum of 1024 characters.

- **StopCommand**   Mandatory. String value. It has a maximum of 1024 characters.

- **MonitorCommand**   Mandatory. String value. It has a maximum of 1024 characters.

- **UserName**   Mandatory. String value. It has a maximum of 1024 characters.

- **StartCommandTimeout**   Optional. Positive Integer value with a default of 5.

- **StopCommandTimeout**   Optional. Positive Integer value with a default of 5.

- **MonitorCommandTimeout**   Optional. Positive Integer value with a default of 5.

- **MonitorCommandPeriod**   Optional. Positive Integer value with a default of 5.

- **RunCommandsSync**   Optional. RunCommandsSync is an integer between 0 and 3. Default is 1.

- **ProtectionMode**   Optional. Allowed values are 0 and 1. Default is 0.

**Occurrence**

0 to multiple times.
IBM.ServiceIPAttributes

Optional. This element is used to specify the attributes of a resource of the class IBM.ServiceIP.

Example

```xml
<IBM.ServiceIPAttributes name="ServiceIPOne">
   <IPAddress>9.164.178.1</IPAddress>
   <NetMask>255.255.255.0</NetMask>
   <ProtectionMode>0</ProtectionMode>
</IBM.ServiceIPAttributes>
```

Attributes

- **name**: Mandatory. Must be unique and has a maximum of 64 characters. A Resource, ConstituentResource, or MoveGroup element can refer to this name.

Sub-elements

- **IPAddress**: Mandatory. String value. Must be an IP address specified in dotted decimal notation.
- **NetMask**: Optional. String value. Must be a Netmask specified in dotted decimal notation.
- **ProtectionMode**: Optional. Allowed values are 0 and 1. Default is 1.

Occurrence

0 to multiple times.
**Policy XML reference**

**IBM.TestAttributes**

Optional. It is used to specify the attributes of a resource of the class IBM.Test.

**Example**

```xml
<IBM.TestAttributes name="TestOne">
  <ForceOpState>2</ForceOpState>
  <TimeToStart>15</TimeToStart>
  <WriteToSyslog>0</WriteToSyslog>
</IBM.TestAttributes>
```

**Attributes**

- **name**: Mandatory. Must be unique and has a maximum of 64 characters. A Resource, ConstituentResource, or MoveGroup element can refer to this name.

**Sub-elements**

See the [IBM Tivoli System Automation for Multiplatforms Base Component Administrator’s and User’s Guide](#) for a detailed description of the following elements.

- **ForceOpState**: Optional. ForceOpState is an integer between 0 and 6.
- **TimeToStart**: Optional. Positive integer value. The default is 0.
- **TimeToStop**: Optional. Positive integer value. The default is 0.
- **WriteToSyslog**: Optional. The default is 0, and the allowed values are either 0 or 1.

**Occurrence**

0 to multiple times.
IBM.TieBreaker

Optional. It is used to specify the attributes of a resource of the class IBM.TieBreaker.

Example

```xml
<IBM.TieBreaker name="BreakIt" class="IBM.TieBreaker">
  <Type>SCSI</Type>
  <DeviceInfo>ID=4 LUN=0</DeviceInfo>
  <HeartbeatPeriod>7</HeartbeatPeriod>
  <NodeInfoList>
    <NodeInfo node="lnxxdr10" info="HOST=0 CHAN=0"/>
    <NodeInfo node="lnxxdr10" info="HOST=2 CHAN=2"/>
  </NodeInfoList>
</IBM.TieBreaker>
```

Attributes

- **name** Mandatory. The string in this attribute identifies the IBM.TieBreaker element. It has maximum number of 64 characters.
- **class** Mandatory. It has the fixed value IBM.TieBreaker.

These attributes make up the unique key of an IBM.TieBreaker. This element cannot be referenced.

Sub-elements

- **Type** Mandatory. Allowed values are Operator, Fail, SCSI, ECKD, EXEC, and DISK.
- **PreReserveWaitTime** Optional. Non-negative integer value, the default is 0.
- **PostReserveWaitTime** Optional. Non-negative integer value, the default is 0.
- **ReleaseRetryPeriod** Optional. Non-negative integer value, the default is 0.
- **HeartbeatPeriod** Optional. Non-negative integer value, the default is 0.
- **DeviceInfo** Optional. String value. It has a maximum of 1024 characters.
- **ReprobeData** Optional. String value. It has a maximum of 1024 characters.
- **NodeInfoList** Optional. Occurs 0 or once, and consists of 0 to n NodeInfo elements.
  
  **NodeInfo**
  
  Contains the node attribute and an info attribute. The maximum number of characters supported is 1024 for both attributes.

- **Active** Optional, type Boolean, valid values are true and false, default is false. Only one instance of an IBM.TieBreaker element may have the value true for this element. This one is the IBM.TieBreaker that is activated in the cluster via the command `chrsr -c IBM.PeerNode OpQuorumTieBreaker="name"`
Occurrence

0 to multiple times.
Members

The Members element must be used within a resource group and within a move group. It may also be used within an equivalency.

Note that if used within a resource group, this element can have the attributes shown under 'Attributes'.

Example

```xml
<ResourceGroup class="IBM.ResourceGroup" name="db2-group">
  <DesiredState>Online</DesiredState>
  <InfoLink>www.ibm.com/TSA/xDR</InfoLink>
  <Members>
    <MoveGroup name="db2floating" class="IBM.Application" selectFromPolicy="Any">
    </MoveGroup>
  </Members>
  <AllowedNode>ALL</AllowedNode>
</ResourceGroup>
```

Attributes

- **mandatory**: Optional. Allowed values for this attribute are true and false, true is the default. Every resource that is mandatory must be online in order to get the whole group online.

- **selectFromPolicy**: Optional. The selectFromPolicy attribute can only be set for members that are move groups. It specifies the policy to be used for selecting a member from the move group's member list. Possible values are Any and Ordered, with Ordered being the default. Ordered means that the selection starts at the beginning. Any means that no specific order needs to be observed.

Sub-elements

None.
Policy XML reference

Description
Optional element. It may contain comments like ASCII text describing the purpose of the element where it is embedded. It has a maximum number of 1024 characters.

This element can be used only as sub-element within the ResourceGroup element. It can occur 0 times or once under one parent element

Example

<Description>
  FixedResource - This is the error reporting daemon of xDR
</Description>

Attributes
None.

Sub-elements
None.

Owner
Optional element. It may contain contact information about the owner of the element where it is embedded. This element can be used only as sub-element within the ResourceGroup element. This element may occur 0 times or once under one parent element. It has a maximum number of 1024 characters.

Example

<Owner>Paul Meyer</Owner>

Attributes
None.

Sub-elements
None.
InfoLink

Optional element. It specifies the URL of a HTML page which shows additional information about the element where it is embedded. This element can be used only as sub-element within the ResourceGroup element. This element may occur 0 times or once under one parent element. It has a maximum number of 1024 characters.

Example

```xml
<ResourceGroup class="IBM.ResourceGroup" name="db2-group">
  <DesiredState>Online</DesiredState>
  <InfoLink>www.ibm.com/TSA/xDR</InfoLink>
  <AllowedNode>ALL</AllowedNode>
</ResourceGroup>
```

Attributes

None.

Sub-elements

None.
Example XML policy

This section shows an example XML policy for the resource group "WebServerGroup" that is depicted in Figure 1. The resource group comprises the three move groups "apache1", "local_mount", and "ha-ip-address", and the harvested file system resource "harvestedFS".

```xml
<?xml version="1.0" encoding="UTF-8"?>
<AutomationPolicy productID="SAM" version="2.2.0.1"
 xmlns="http://www.ibm.com/TSA/Policy.xsd"
 xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:schemaLocation="http://www.ibm.com/TSA/Policy.xsd SAMPolicy.xsd">
 <PolicyInformation>
  <PolicyName>WebServer-Policy</PolicyName>
  <AutomationDomainName>clustername</AutomationDomainName>
  <PolicyToken>1.0.0</PolicyToken>
  <PolicyDescription>this is the policy for the WebServer</PolicyDescription>
  <PolicyAuthor>authorname</PolicyAuthor>
 </PolicyInformation>

 <ConstituentResource name="apache1" class="IBM.Application" node="node1" />
 <ConstituentResource name="apache1" class="IBM.Application" node="node2" />

 <ConstituentResource name="local_mount" class="IBM.AgFileSystem" node="node1" >
   <ClassAttributesReference>
     <IBM.AgFileSystemAttributes name="FileSystem1"/>
   </ClassAttributesReference>
 </ConstituentResource>
 <ConstituentResource name="local_mount" class="IBM.AgFileSystem" node="node2" />

 <ConstituentResource name="ha-ip-address" class="IBM.ServiceIP" node="node1" />
 <ConstituentResource name="ha-ip-address" class="IBM.ServiceIP" node="node2" />

 <IBM.ApplicationAttributes name="Application1">
  <StartCommand>/PATH-TO-SCRIPT/apache start</StartCommand>
  <StopCommand>/PATH-TO-SCRIPT/apache stop</StopCommand>
  <MonitorCommand>/PATH-TO-SCRIPT/apache status</MonitorCommand>
  <UserName>root</UserName>
  <MonitorCommandPeriod>5</MonitorCommandPeriod>
  <MonitorCommandTimeout>4</MonitorCommandTimeout>
  <StartCommandTimeout>10</StartCommandTimeout>
</IBM.ApplicationAttributes>
</AutomationPolicy>
```

Figure 1. WebServerGroup resource group
Policy XML reference

<StopCommandTimeout>10</StopCommandTimeout>
<RunCommandsSync>1</RunCommandsSync>
</IBM.ApplicationAttributes>

<IBM.AgFileSystemAttributes name="FileSystem1">
  <DeviceName>/dev/DEVICE1</DeviceName>
  <MountPoint>/MOUNTPOINT1</MountPoint>
  <Vfs>ext3</Vfs>
  <ProtectionMode>1</ProtectionMode>
</IBM.AgFileSystemAttributes>

<IBM.AgFileSystemAttributes name="FileSystem2">

Chapter 3. Messages generated by IBM Tivoli System Automation

This chapter is for any user who is responsible for diagnosing problems related to IBM Tivoli System Automation. The chapter is divided into the following sections:

- "Base component messages" lists the messages that are generated by the base component of IBM Tivoli System Automation and describes solutions for each of these messages.
- "Messages generated by the sampolicy command" on page 173 lists the messages that are generated by the sampolicy command and have the prefix SAMP. The sampolicy command may also generate messages with the prefix EEZ. These messages are listed in the IBM Tivoli System Automation for Multiplatforms End-to-End Automation Management Component Reference.
- "Messages generated by the System Automation for Multiplatforms end-to-end automation adapter and the HACMP adapter" on page 183 lists the messages that are generated by the end-to-end automation adapter and the HACMP adapter and have the prefix SAMA. The adapters may also generate messages with the prefix EEZ. These messages are listed in the IBM Tivoli System Automation for Multiplatforms End-to-End Automation Management Component Reference.

Base component messages

This section lists the messages that are generated by the base component.

2621-001  Attribute "attribute_name" cannot be specified when defining a new resource.
Explanation: An error occurred when an attribute that can not be used in defining a resource has been specified.
User response: Specify only the attributes which can be specified in defining the resource.

2621-002  Attribute "attribute_name" appears in request more than once.
Explanation: An error occurred as the same attribute is used multiple times.
User response: Use the attribute only once.

2621-003  Class name "class_name" is not recognized by this resource manager.
Explanation: An internal error occurred when attempting to create an RCCP for a class which does not exists.
User response: Contact your software service organization.

2621-004  Could not initialize control point for class "class_name".
Explanation: An internal error occurred when attempting to create an RCCP for the class.
User response: Contact your software service organization.

2621-005  Attribute "attribute_name" must be specified when defining a new resource.
Explanation: This error was detected when a mandatory attribute is excluded in defining a resource.
User response: Use "lsrsrcdef <class name>" to check the attribute properties, include all mandatory (ReqdForDefine) attributes.
<table>

</tr>
<tr>
<td>2621-008</td>
<td>Failed to update resource because of configuration data replication errors.</td>
<td>An error occurred while replicating data.</td>
<td>Retry the operation. If the problem continues, report to your software service organization.</td>
</tr>
<tr>
<td>2621-009</td>
<td>Command not allowed - IBM.RecoveryRM not initialized.</td>
<td>The resource manager is not yet initialized to perform client's request.</td>
<td>Wait for initialization and retry the command.</td>
</tr>
<tr>
<td>2621-010</td>
<td>Command not allowed - IBM.RecoveryRM not in configuration quorum.</td>
<td>The cluster is probably running with several IBM.RecoveryRM daemons failure. The operation needs the quorum of IBM.RecoveryRM daemons online.</td>
<td>Try to restart the failed IBM.RecoveryRM daemons to bring back the configuration quorum.</td>
</tr>
<tr>
<td>2621-011</td>
<td>Command not allowed - node failed configuration data replication.</td>
<td>The node had failed updating the configuration data - can not perform the client's request.</td>
<td>Retry the operation. If the problem continues, report to your software service organization.</td>
</tr>
<tr>
<td>2621-012</td>
<td>Command not allowed - configuration data replacement in process.</td>
<td>The system is in transition to a new configuration data - can not perform the client's request.</td>
<td>Retry the operation. If the problem continues, report to your software service organization.</td>
</tr>
<tr>
<td>2621-013</td>
<td>Command not allowed - replication can not be started.</td>
<td>An error occurred in initializing the replication process.</td>
<td>Retry the operation. If the problem continues, report to your software service organization.</td>
</tr>
<tr>
<td>2621-014</td>
<td>Command not allowed - one or more related resource groups are online.</td>
<td>An error was generated while changing a managed resource, resource group, or relationship which involves one or more online resource groups.</td>
<td>Before changing the resource, the resource groups have to be offline.</td>
</tr>
<tr>
<td>2621-015</td>
<td>Failed to get resource class persistent attributes for class &quot;class_name&quot;.</td>
<td>An error was returned while querying the class to get its persistent attributes.</td>
<td>Check if the resource manager to which the class belongs to is operational. If the resource manager is inoperative, consult its user guide to check how to restart.</td>
</tr>
</tbody>
</table>
2621-016  Failed to get definition of resource persistent attributes for class "class_name".
Explanation: An error was returned while querying a resource to get its persistent attributes.
User response: Check if the resource manager to which the class belongs to is operational. If the resource manager is inoperative, consult its user guide to check how to restart.

2621-017  Time out waiting for attribute query responses for the "class_name" class.
Explanation: A time out error occurred while waiting for attribute query response from RMC.
User response: Check if the resource manager to which the class belongs to is operational. If the resource manager is inoperative, consult its user guide to check how to restart.

2621-018  Error encountered when calling function "function_name". return code = return_code
Explanation: An error condition was returned when this function was invoked.
User response: This is an internal error, report it to your software service organization.

2621-019  Time out waiting for response of event registration with resource handle.
Explanation: A time out error occurred while waiting for a response on an event registration with resource handle.
User response: Check if the RMC and the resource manager for the resource are running (use "lssrc -a" command). If either of the subsystem is inoperative, consult the corresponding user guide to check how to restart the non-operational subsystem.

2621-020  Resource has an invalid resource class name "resource_class_name".
Explanation: The referenced resource class name is not found.
User response: Use "lssrc" command to display the supported resource classes. Correct the class name and retry the operation.

2621-021  Resource does not exist.
Explanation: The referenced resource is not found.
User response: Use "lssrc class_name" to display all resources with in a class.

2621-022  Resource encounters event registration error. The error message is: [error_message]
Explanation: An error message was returned by the RMC in response to an event registration for a resource.
User response: Check the error message and take the appropriate measure. Restart the RMC and the resource manager if they are not running.

2621-023  Resource RCP not found
Explanation: An internal error was detected while a control point for a resource was not found.
User response: Contact your software service organization.

2621-024  Timed out waiting for resource enumeration responses for the IBM.PeerDomain class.
Explanation: A time out error occurred while waiting for peer domains enumeration registration
User response: Check if the RMC and ConfigRM are running (use "lssrc -a" command). If either of the subsystem is inoperative, consult the RMC/ConfigRM user guides to check how to restart the non-operational subsystem.

</tr>
<tr>
<td>2621-050</td>
<td>Resource group name &quot;\textit{resource_group_name}&quot; already defined.</td>
<td>An error was detected while an existing resource group name is used to define a new resource group.</td>
<td>Use an unique name and retry the command.</td>
</tr>
<tr>
<td>2621-051</td>
<td>Resource group has an invalid allowed node as the equivalency members do not belong to IBM.PeerNode.</td>
<td>The AllowedNode of the defined resource group comes from an equivalency whose MemberClass attribute is not IBM.PeerNode.</td>
<td>Correct the problem and retry the operation.</td>
</tr>
</tbody>
</table>
Resource group member location is incompatible with its outer resource group.

Explanation: The MemberLocation attribute of the inner resource group is incompatible with its outer resource group.

User response: Correct the problem and retry the operation.

Resource group member location is incompatible with its members relationships.

Explanation: The MemberLocation attribute of the resource group is incompatible with a defined location sensitive (Collocated, DependsOn, etc.) managed relationship. The resource group may have one or more members participating in the conflicted relationship.

User response: Fix the location compatibility problem either by changing the attribute or the relationship or both.

Resource group priority must be between 0 and 200.

Explanation: The priority value specified by the user is not valid.

User response: Specify a priority with in the valid range 0 and 200.

Resource group priority resource_group_priority exceeds the priorities of outer resource groups.

Explanation: An error was detected in a nested resource group where an inner resource group has a higher priority than an outer resource group.

User response: Reset the priority so that outer resource group has the same or higher priority than an inner resource group, and retry the command.

Resource group has an invalid value for attribute MemberLocation: invalid_value.

Explanation: The value entered for attribute MemberLocation is invalid.

User response: Define resource group with a valid value for attribute MemberLocation.

Resource group has an invalid value for attribute NominalState: invalid_value.

Explanation: The value entered for attribute NominalState is invalid.

User response: Enter a valid value for attribute NominalState.

Resource group nesting level exceeds the maximum of 50 levels.

Explanation: The resource groups nesting level can not exceed maximum of 50 levels.

User response: Reduce the resource groups nesting level.

Node ID can not be found.

Explanation: A node id in SubmitRequest resource action does not correspond to a node in cluster

User response: Check value of node id. Correct the value and retry the action

ExcludedList is not supported for Resource Group in the current active version of the cluster.

Explanation: The cluster is in co-existence or migration mode. The current active version does not support the ExcludedList attribute for Resource Groups.

User response: Retry after migration is completed.
<table>
<thead>

</tr>
</tbody>
</table>
2621-110 • 2621-118

2621-110  Can not find resource class information for managed resource.
Explanation: An error was generated when enumerating the class information for a resource.
User response: Verify that the correct class name was used. If error continues, report to your software service organization.

2621-111  Resource group can not be a member of itself.
Explanation: A managed resource (resource group) can not be nested within itself.
User response: Retry the operation with correct parameters.

2621-112  Value of attribute Mandatory: invalid_value for managed resource is not valid.
Explanation: The value entered for attribute Mandatory is invalid.
User response: Define managed resource with a valid value for attribute Mandatory.

2621-113  Managed resource "resource_name" is the target of a resource in another tree.
Explanation: A managed resource can not be the target of two independent resource groups. The error was generated due to the violation of this constraint.
User response: Remove the conflict and retry the operation.

2621-114  Managed resource "resource_name" can not be defined in an equivalency.
Explanation: An error was generated when a managed resource was being included as a member of an equivalency.
User response: Define the equivalency only with resources that are not defined as managed resources.

2621-115  Managed resource is from an invalid class.
Explanation: A resource designated as managed has a resource handle that does not belong to the referenced class.
User response: Correct the class name and retry the operation.

2621-116  Resource does not have dynamic attribute - OpState.
Explanation: An error was generated while it was detected that resource class does not have the dynamic attribute - OpState.
User response: Check dynamic attributes of the resource class. Add only the resources which has OpState.

2621-117  Can not change source managed resource while there are targets.
Explanation: An error was generated while trying to change the source of a relationship when the relationship has one or more targets.
User response: Remove the relationship and recreate a new one with appropriate source.

2621-118  Can not change the resource handle of a managed resource.
Explanation: A managed resource always represents the resource for which it was created.
User response: Remove the member representing the managed resource from the resource group and add a new member that points to the correct resource.
2621-119 Resource group does not exist.
Explanation: An error was generated when a non-existent resource group was referenced.
User response: Check the valid resource groups using "lsrg" command. Retry the operation using correct resource group.

2621-120 Operation temporarily disallowed, as resource registration is in progress.
Explanation: Previous attempt to register for resource events failed. While daemon is retrying the registration, some functionalities is not available.
User response: Correct the registration problem, then retry the operation.

2621-121 Value of attribute SelectFromPolicy: invalid_value for managed resource is not valid.
Explanation: The value entered for attribute SelectFromPolicy is invalid.
User response: Define managed resource with a valid value for attribute SelectFromPolicy.

2621-122 SelectFromPolicy is not supported for Managed resources in the current active version of the cluster.
Explanation: The cluster is in co-existence or migration mode. The current active version does not support the SelectFromPolicy feature for managed resources.
User response: Retry after migration is completed.

2621-123 Subscription is not supported for Managed Resource in the current active version of the cluster.
Explanation: The cluster is in co-existence or migration mode. The current active version does not support the Subscription attribute for Managed Resource.
User response: Retry after migration is completed.

2621-150 Managed relationship has a source resource that is not a managed resource.
Explanation: An error was detected when a non-managed resource was used as the source of a managed relationship. The source must be a managed resource.
User response: Correct the problem, and retry the operation.

2621-151 Managed relationship has a target resource that is not valid.
Explanation: An error was generated as an invalid or non-existent resource was used as the target of a managed relationship.
User response: Correct the problem and retry the operation.

2621-152 Managed relationship name "relationship_name" already defined.
Explanation: A managed relationship with this name was already defined.
User response: Use an unique name and retry the operation.

2621-153 Managed relationship target specified more than once.
Explanation: An error was generated as a resource was used more than once as the target of a managed relationship.
User response: Correct the problem and retry the operation.
2621-154  Managed relationship has an invalid value 0 for attribute - Relationship.
Explanation: A new managed relationship was being defined with no (NONE) relationship value.
User response: Define managed relationship with a valid value for relationship.

2621-155  Managed relationship source defined as target resource.
Explanation: An error condition was detected. A managed relationship’s source and target cannot be the same.
User response: Remove source resource from the target, and retry the operation.

2621-156  Managed relationship conflicts with a previously defined relationship.
Explanation: A new relationship was defined which conflicts with a previously defined location sensitive or order sensitive relation.
User response: Remove the conflict and retry the operation.

2621-157  Managed relationship duplicates a previously defined relationship.
Explanation: An error was generated due to re-definition of a relationship.
User response: Define only one instance of a relationship.

2621-158  Managed relationship has a source or target that is not of an allowed class.
Explanation: The resource from this class can’t be the source or target of the defined relationship.
User response: Correct the source or target resource and retry the operation.

2621-159  Managed relationship is not consistent with source’s resource group member location.
Explanation: A conflict was detected in location association of the relationship.
User response: Check the source’s MemberLocation attribute and correct the problem.

2621-160  Managed relationship introduces circular relationship from a resource back to itself.
Explanation: For StartAfter or DependsOn, or DependsOnAny relationship, a circular dependency was detected which may create a deadlock.
User response: Remove the circular dependency and retry the operation.

2621-161  Specified Relationship attribute for Managed relationship is not supported by current active version of the cluster.
Explanation: The cluster is in co-existence or migration mode. The current active version does not support the specified relationship attribute.
User response: Retry after migration is completed.

2621-200  Equivalency name "equivalency_name" already defined.
Explanation: An equivalency with this name was already defined.
User response: Use an unique name and retry the operation.

2621-201  Equivalency membership must either be explicitly enumerated or specified with a select string.
Explanation: An error was generated while both a select string and an enumerated set of resource handles are used to define equivalency membership.
User response: Use either enumeration or select string (not both) and retry the operation.
2621-202  Equivalency has an invalid select string.
Explanation:  User entered an invalid select string.
User response:  Correct the problem, especially check the attribute name and value. Retry the operation.

2621-203  Equivalency has an invalid member.
Explanation:  An error condition was detected as an equivalency member was found which was either a managed resource or did not belong to the same class as other members.
User response:  Correct the problem and retry the operation.

2621-204  Equivalency of nodes has invalid member.
Explanation:  A node in an equivalency do not belong to IBM.PeerNode class.
User response:  Correct the problem and retry the operation.

2621-205  Equivalency has members belonging to different resource classes.
Explanation:  An error was detected in an equivalency members. Resources within the equivalency are from different classes. All resources within the an equivalency must be from the same class.
User response:  Correct the problem and retry the operation.

2621-206  Equivalency membership has a duplicated resource handle "resource_handle".
Explanation:  Two members of an equivalency has the same resource handle.
User response:  Remove one and then retry the operation.

2621-207  Equivalency membership has resource handles containing multiple class ids (class_id1 and class_id2).
Explanation:  An error was generated while defining an equivalency. Two resource members within the equivalency are from different classes. All resources within the an equivalency must be from the same class.
User response:  Correct the problem and retry the operation.

2621-208  Equivalency need to specify both select string and a valid resource class name.
Explanation:  An error was generated while an invalid resource class name was used with the dynamic select string.
User response:  Correct the class name and retry the operation.

2621-209  Can not find resource class information for equivalency "equivalency_name".
Explanation:  An error was generated while enumerating the class information for the member class.
User response:  This may be an internal error, report to your software service organization.

2621-210  Resource class "resource_class_name" is invalid for equivalency.
Explanation:  A resource from this class is not valid for this equivalency. Class id may be different from other members.
User response:  Use the resources from the same class to correct the problem.

2621-211  Resource class may not be changed in an equivalency without replacing the members.
Explanation:  An error was generated while user was trying to change the MemberClass attribute value of an equivalency which has members (may be from a different class).
User response:  Remove the members before changing the MemberClass.
2621-212  ManagedResource "equivalency_name" can not be a member of an Equivalency.
Explanation: An error was generated as a managed resource was placed as a member of this equivalency.
User response: Add only the resources that are not member of any resource group.

2621-213  A ManagedResource referenced as an AllowedNode may not change its class.
Explanation: Error was detected as class of a managed resource referenced as an AllowedNode was changed.
User response: Remove the error condition and retry.

2621-214  Resource class may not be changed for an equivalency if there are members.
Explanation: An error was generated while user was trying to change the MemberClass attribute value of an equivalency which has members (may be from a different class).
User response: Remove the members before changing the MemberClass.

2621-215  A selection Policy other than ANY is invalid with a selection string.
Explanation: An error was generated while parsing an equivalency definition with selection string where the selection policy was not ANY.
User response: Change the selection policy to ANY and retry the operation.

2621-216  Minimum value must between 1 and 100.
Explanation: An error was generated while an invalid MinimumNecessary attribute value was entered by the user.
User response: Use a valid value from 1 - 100 and retry the command.

2621-217  Equivalency contains no member resource
Explanation: This error message indicates that an IBM.Equivalency resource is defined with a NULL select string, and an empty membership list.
User response: Define an equivalency with either a select string or a non-empty membership list.

2621-218  Floating resource with resource handle \\"resource_handle\\" can not be a member of Equivalency \\"Equivalency_name\\".
Explanation: Floating resources are not allowed to be a member of an equivalency.
User response: Add only fixed or constituents resources as members of equivalencies.

2621-219  Subscription is not supported for Equivalency in the current active version of the cluster.
Explanation: The cluster is in co-existence or migration mode. The current active version does not support the Subscription attribute for Equivalency.
User response: Retry after migration is completed.

2621-300  Node specified by resource handles for excluded nodes could not be found.
Explanation: The excluded nodes contains one or more nodes that are not defined in IBM.PeerNode resource class.
User response: Correct the problem and retry the operation.

<td></td>
</tr>
</tbody>
</table>
User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-319 IBM.RecoveryRM publisher configuration file syntax error. Parameter "parameter" not found in publisher configuration file "file_name" for the publisher name "publisher_name".

Explanation: IBM.RecoveryRM publisher configuration file syntax error. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-320 IBM.RecoveryRM publisher configuration file syntax error. Same publisher name found multiple times in publisher configuration file "file_name" with the publisher name "publisher_name".

Explanation: IBM.RecoveryRM publisher configuration file syntax error. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-321 IBM.RecoveryRM publisher configuration file syntax error. Too many publishers found in publisher configuration file "file_name". Maximum number of max_number_publishers publishers supported.

Explanation: IBM.RecoveryRM publisher configuration file syntax error. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-322 The command "samctrl -e|-d <publisher>" failed on the master node. Ensure that all publisher configuration files have the same content on all nodes. detailed_msg

Explanation: During the process of attempting to add or change a publisher, it was discovered that the specified publisher name cannot be set.

User response: Correct the problem and retry the operation.

2621-323 IBM.RecoveryRM publisher configuration file "file_name" does not contain publisher name "publisher_name".

Explanation: IBM.RecoveryRM publisher not found. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-324 IBM.RecoveryRM publisher configuration file syntax error. Publisher name does not follow syntax rules in publisher configuration file "file_name" for the publisher name "publisher_name". Publisher name length: 1-8, Publisher name valid characters: \0\-\9\, \A\-\Z\, \a\-\z\ and \_\.

Explanation: IBM.RecoveryRM publisher configuration file syntax error. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

2621-325 IBM.RecoveryRM publisher configuration file "file_name" does not contain a valid publisher name.

Explanation: IBM.RecoveryRM publisher not found. This publisher cannot be enabled.

User response: Fix the problem with the publisher configuration files and enable this publisher by using the \\samctrl -e <publisher>\" command.

SA detected that the system "system_name" switched into maintenance mode by an operator command in domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[StartedMaintenance]; severity=WARNING
User response: This resource is no longer under control of System Automation.

SA detected that the system "system_name" switched back to automation mode by an operator command in domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[FinishedMaintenance]; severity=WARNING
User response: This resource is now under control of System Automation.

SA set the resource "resource_name" online as requested in domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[ResourceOnline]; severity=HARMLESS
User response: System Automation has set the resource online successfully.

SA set the resource "resource_name" offline as requested in domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[ResourceOffline]; severity=HARMLESS
User response: System Automation has set the resource offline successfully.

SA detected that the system "system_name" joined the domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[SystemJoinedCluster]; severity=HARMLESS
User response: A system joined the cluster.

SA detected that the system "system_name" left the domain "domain_name".

Explanation: Event Attributes: sa_event_reason=[SystemLeftCluster]; severity=WARNING
User response: A system left the cluster.

SA detected a warning in domain "domain_name". The resource "resource_name" has been degraded.

Explanation: Event Attributes: sa_event_reason=[ResourceDegraded]; severity=WARNING
User response: The resource has been degraded. Inspect the individual status fields of this resource.

SA detected a warning in domain "domain_name". The resource "resource_name" has a performance problem.

Explanation: Event Attributes: sa_event_reason=[ResourceIll]; severity=WARNING
User response: The resource has a performance problem.

SA detected a warning in domain "domain_name". The resource "resource_name" has problems caused by a dependency to another resource.

Explanation: Event Attributes: sa_event_reason=[ResourceInhibited]; severity=WARNING
User response: An automation operation on the specified resource cannot be performed because it depends on another resource which prevents the operation. Inspect the status of the resources on which the specified resource depends.

</table>
| 2621-788 | **SA detected a problem in domain "domain_name". No online system found to start resource "resource_name" based on the configuration.**  
Explaination: Event Attributes: sa_event_reason=[ResourceSacrificed]; severity=CRITICAL  
User response: No online system found to start the resource based on the configuration. |
| 2621-789 | **SA detected a problem in domain "domain_name". The resource "resource_name" cannot be set to the requested state.**  
Explaination: Event Attributes: sa_event_reason=[ResourceHung]; severity=CRITICAL  
User response: An automation operation on the specified resource cannot be performed. Inspect the individual status fields of this resource. |
| 2621-790 | **SA detected a problem in domain "domain_name". The resource "resource_name" needs a manual reset by the operator.**  
Explaination: Event Attributes: sa_event_reason=[ResourceBroken]; severity=CRITICAL  
User response: An automation operation on the specified resource cannot be performed. Reset the automation resource manually. |
| 2621-791 | **SA detected a problem in domain "domain_name". The resource "resource_name" has problems caused by a offline system.**  
Explaination: Event Attributes: sa_event_reason=[SystemGone]; severity=CRITICAL  
User response: The resource has problems caused by a offline system. Inspect the system status of this resource. |
| 2621-792 | **SA detected a problem in domain "domain_name". The operational quorum is lost.**  
Explaination: Event Attributes: sa_event_reason=[NoQuorum]; severity=CRITICAL  
User response: The operational quorum is lost. Inspect the cluster status. |
| 2621-793 | **Node "node_name" cannot be made offline. System Automation Manager reports that there are resources online on this node.**  
Explaination: Stopping system automation on this node is prevented because of running resources.  
User response: There are resources online on this node, that must be stopped prior to stopping the system automation. |
| 2621-794 | **Node can be made offline.**  
Explaination: Stopping system automation is not prevented on this node.  
User response: There are no controllable resources online on this node. |
| 2622-001 | **program_name: 2622-001 Not a recognized flag: flag.**  
Explaination: The flag or combination of flags passed to <program_name> was either an unsupported flag or an invalid combination of flags.  
User response: Refer to the Usage statement which lists the valid flag. Correct the command and re-enter. |
| 2622-002 | **program_name: 2622-002 Flag "flag" is not allowed with the unsupported operand "operand".**  
Explaination: The operand passed with the flag was an unsupported or invalid operand or combination of operands.  
User response: Refer to the Usage statement which lists the valid operand. Correct the command and re-enter. |
2622-003  program_name: 2622-003 The combination of flags "flag" and "flag or operand" is not allowed.
Explanation: The combination of the specified flags or flag and operand is not allowed.
User response: Either choose a different flag or do not enter the operand. Refer to the Usage statement which lists the valid valid flag, operands, and flag operand combinations.

2622-004  program_name: 2622-004 The "flag" flag is required.
Explanation: The indicated flag must be specified when using this command.
User response: Check the command syntax and issue the command again.

2622-005  program_name: 2622-005 The "flag" flag requires an operand.
Explanation: The indicated flag must be specified with an operand when using this command.
User response: Check the command syntax and issue the command again.

2622-006  program_name: 2622-006 There are no resource groups defined.
Explanation: There were no Resources Groups.
User response: Add Resources Groups.

2622-007  program_name: 2622-007 There are no member resources defined.
Explanation: There were no member Resources.
User response: Add member resources to groups.

2622-008  program_name: 2622-008 Not a valid number of operands.
Explanation: <program_name> was called with an invalid number of operands.
User response: Refer to the Usage statement which lists the valid operand. Correct the command and re-enter.

2622-009  program_name: 2622-009 An unexpected RMC error occurred. The RMC return code was rmc_return_code.
Explanation: A call to an RMC CLI script returned an unexpected error.
User response: Check to see if RMC is operational and retry the command.

2622-010  program_name: 2622-010 error_exit received an unexpected return code return_code.
Explanation: All SAM return codes should be converted to an appropriate SAM CLI (command line interface) return code. The actual API return code or other internal subroutine return code is printed. It is treated as a severe error and processing of the command stops.
User response: This is an internal script error and should not occur. Report the command name, and this message to the IBM Support Center at your convenience.

2622-011  program_name: 2622-011 The specified selection string "selection_string" did not match any resource groups.
Explanation: The specified selection string did not match any resource groups.
User response: Check the selection string and issue the command again.

<td>Add these resources as member resources.</td>
</tr>
</tbody>
</table>
2622-021  program_name: 2622-021 Multiple entries of the flag flag not allowed.
Explanation: User had entered the same flag with operands more than once.
User response: Re-enter the command with only one occurrence of the concerned flag.

2622-022  program_name: 2622-022 None of the resources specified are managed resources.
Explanation: None of the resources specified exist as managed resources.
User response: Check resources and re-enter with valid resources.

2622-023  program_name: 2622-023 Resource "resource" is not a managed resource.
Explanation: Specified resource is not a managed resource.
User response: Check Resources and re-enter with valid resources.

2622-024  program_name: 2622-024 Either flag "flag1" or "flag2" or "flag3" is required with the -N flag.
Explanation: One the three flags are required when using current flag.
User response: Add the required flags to the command and try again.

2622-025  program_name: 2622-025 The specified source resource "source_resource" does not exist.
Explanation: The specified source resource name does not exist in the specified class.
User response: Check the resource name and class name combination and then issue the command again.

2622-026  program_name: 2622-026 The specified source selection string "source_string" did not match any resource.
Explanation: The specified source selection string did not match any resource in the specified class.
User response: Check the selection string or class name combination and then issue the command again.

2622-027  program_name: 2622-027 More than one relations were found with the same name "source_resource".
Explanation: More than one relations was returned for the source when the operation only requires one relationship.
User response: Make the query more specific and issue the command again.

2622-028  program_name: 2622-028 Name change not allowed for more than one relations that matched from "query".
Explanation: The selection string or query returned more than one source resource. Relation name has to be unique.
User response: Check the selection string or query and issue the command again.

2622-029  program_name: 2622-029 The specified equivalency "equivalency" already exists.
Explanation: Specified equivalency already exists.
User response: Re-enter the command with an equivalency name that does not already exist.

2622-030  program_name: 2622-030 The specified equivalency "equivalency" does not exist.
Explanation: Specified equivalency does not exist.
User response: Make sure the equivalency name already exist, re-issue the command.
2622-031  The node "node_name" does not exist in the cluster.
Explanation: The node specified does not belong in the cluster.
User response: Check the node name and issue the command again.

2622-032  Resource "resource_name" of resource class "class_name" is not from the allowed nodes for resource group "Resource_group_name".
Explanation: Member resource is not from the allowed nodes for the new resource group.
User response: Member resources must be part of the allowed node list of resource group.

2622-033  Resource Group "resource_group" has no member resources.
Explanation: The specified resource group name does not contain any member resources.
User response: Check the resource group name and issue the command again.

2622-034  No resource groups were found that matched the specified query.
Explanation: No existing resource groups matched the specified Query.
User response: Check the resource group name and issue the command again.

2622-035  No member resources were found that matched the specified query.
Explanation: No existing member resources matched the specified query.
User response: Check the selection string or resource group name and issue the command again.

2622-036  actual_error_message
Explanation: Display the error message from lsrsrc-api.
User response: Check the error Message for appropriate action.

2622-037  Invalid user error. The return code was return Code
Explanation: SAM command line interface user Error.
User response: Check the error message for appropriate action.

2622-038  No resources were found. The return code was return Code
Explanation: No resources were found.
User response: Check the error message for appropriate action.

2622-039  No resources were specified for class class_name
Explanation: No resources were specified for the class in the command line.
User response: Repeat the command with resources associated with the specified class.

2622-040  Multiple resources of the same type were matched for resource "resource_name" from class "resource_class"
Explanation: Multiple resources of the same resource type were found for the specified resource.
User response: Make sure only one resource is matched with same Type and then re-enter the command.
2622-901  program_name: 2622-901 Attributes and Arguments are mismatched.
Explanation: Arguments are missing for some of the attributes in the input file.
User response: Repeat the command by updating the input file.

2622-902  program_name: 2622-902 Do not specify attribute attribute when defining resource resource_class row: row.
Explanation: Arguments are missing for some of the attributes in the input file.
User response: Repeat the command by updating the input file.

2622-903  program_name: 2622-903 Error processing attribute attribute_name value "attribute_value".
Explanation: The value for this particular attribute is not valid. See the preceding error message for additional details.
User response: Verify the data type for this particular attribute using the lsrrcdef command. Verify and correctly specify the value so that it is appropriate for this data type. For example, if the data type is an array, the values must be enclosed within curly braces ({ }). See the appropriate command man page and the man page for the Resource Data Input File for valid syntax values.

2622-904  program_name: 2622-904 Required argument argument_name argument name (SD element name) for resource resource_class name of the resource class must be specified.
Explanation: The specified command arguments for this resource class and this command must be specified.
User response: Run lscmdargdef command to see the list of argument names and data types expected as input for this command.

2622-905  program_name: 2622-905 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-906  program_name: 2622-906 Failed to create some or all resources from Input file "input_file_name".
Explanation: Failed to create some or all resources from input file for specified class.
User response: Check the file data, correct if possible and re-run command.

2622-907  program_name: 2622-907 Fixed resource resource on node node_name is not a managed resource.
Explanation: Specified fixed resource is not a managed resource.
User response: Check Resources and re-enter with valid resources.

2622-908  program_name: 2622-908 Resource "resource_name" of resource class "class_name" is not from the allowed nodes for the Top resource group "Top_Resource_group_name".
Explanation: Member resource is not from the allowed nodes for the new resource group’s top most group.
User response: Member resources must be part of the allowed node list of resource group and its top most group.

2622-909  program_name: 2622-909 A Consumer is required for the Specified subscription "Subscription".
Explanation: Specified Subscription is missing the consumer.
User response: Re-enter subscription with a valid Consumer.
2622-910  •  2622-918

2622-910  program_name: 2622-910  The event family "event_family" specified with the subscription "subscription" is not supported.
Explanation: Specified Subscription contains an invalid event family value.
User response: Re-enter subscription with a valid event family.

2622-911  program_name: 2622-911  The event filter "event_filter" specified with the subscription "subscription" is not supported.
Explanation: Specified Subscription contains an invalid event filter value.
User response: Re-enter subscription with a valid event filter.

2622-912  program_name: 2622-912  Consumer "consumer" can be specified more than once for the same resource.
Explanation: Only one subscription per consumer is allowed to a resource.
User response: Re-enter subscription without any duplicate consumer.

2622-913  program_name: 2622-913  Subscription "subscription" already exist as a subscription.
Explanation: Specified subscription already exist for the specified resource.
User response: None.

2622-914  program_name: 2622-914  Subscription "subscription" can be found.
Explanation: Specified subscription does not exist for this resource, therefore cannot be removed.
User response: None.

2622-915  program_name: 2622-915  None of the subscription specified exists in the list.
Explanation: The specified subscriptions do not exist in the subscription list.
User response: Check the subscriptions and issue the command again.

2622-916  program_name: 2622-916  All the Subscriptions specified already exists in the list.
Explanation: All the specified subscriptions already exist in the subscription list.
User response: Check the subscription names and issue the command again.

2622-917  program_name: 2622-917  When specifying an equivalency select-from policy, the combination of values options is not allowed.
Explanation: The combination of the specified option is not allowed.
User response: Either choose a different option or do not enter the operand. Refer to the Usage statement which lists the valid valid flag, operands, and flag operand combinations.

2622-918  program_name: 2622-918  When specifying an equivalency select-from policy, either of the values "A" or "O is required.
Explanation: One of the specified values must be provided when specifying a select-from policy.
User response: Either choose one of the given values or do not specify a policy. Refer to the Usage statement which lists the valid valid flag, operands, and flag operand combinations.

</table>
Program 2622-103

None of the specified resource groups were found or could not be changed.

Explanation: None of the specified resource group or selection string matched any existing resource groups or some of them just couldn’t be changed.

User response: Check the message that preceded this message for the actual cause, if resource groups already exist.

Program 2622-104

Resource Group "resource_group" does not exist or could not be changed.

Explanation: The specified resource group was not found or even if it was found it just couldn’t be changed.

User response: Check the message that preceded this message for the actual cause, if resource group already exists.

Program 2622-105

Allowed node of Resource Group "resource_group" could not be changed to node "node_name".

Explanation: The specified resource group’s allowed node could not be changed to the specified node because its members are not from this node.

User response: Specify a node or equivalency that contains all the nodes of the resource groups members.

Program 2622-106

Allowed node of Resource Group "resource_group" could not be changed to the equivalency "equiv_name".

Explanation: The specified resource group’s allowed node could not be changed to the specified equivalency because its members are not from the nodes in the equivalency.

User response: Specify a node or equivalency that contains all the nodes of the resource groups members.

Program 2622-107

Allowed node of all the specified resource groups could not be changed.

Explanation: The specified resource group’s allowed node could not be changed to the specified equivalency or node because its members are not from the node or nodes in the equivalency.

User response: Specify a node or equivalency that contains all the nodes of the resource groups members.

Program 2622-108

The specified node "excluded_node" does not exist in the list.

Explanation: The specified node name does not exist in the excluded node list.

User response: Check the node name and issue the command again.

Program 2622-109

The specified node "excluded_node" already exists in the list.

Explanation: The specified node name already exists in the excluded node list.

User response: Check the node name and issue the command again.

Program 2622-110

None of the nodes specified exists in the list.

Explanation: The specified node names do not exist in the excluded node list.

User response: Check the node names and issue the command again.

Program 2622-111

None of the nodes specified exists in the cluster.

Explanation: The specified node names do not exist in the cluster.

User response: Check the node names and issue the command again.
2622-112  program_name: 2622-112 All the nodes specified already exists in the list.
Explanation: All the nodes specified nodes already exist in the excluded node list.
User response: Check the node names and issue the command again.

2622-113  program_name: 2622-113 Too many groups were specified to change to the new ExcludedList.
Explanation: Only one group name can be specified to change the excluded node list attribute.
User response: Check the group name and issue the command again.

2622-121  program_name: 2622-121 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-122  program_name: 2622-122 No Selection string entered for Resource class "resource_class".
Explanation: Selection string was not entered with the command for the specified class.
User response: Enter the selection string and retry the command.

2622-123  program_name: 2622-123 None of the specified member resources are from the allowed nodes for resource group "resource_group".
Explanation: All of the specified resources are not in the allowed node list of the new resource group.
User response: Member resources must be part of the allowed node list of resource group.

2622-124  program_name: 2622-124 The specified managed resource input file "input_file_name" does not exist.
Explanation: Specified resource file name was not found.
User response: Make sure the managed resource file name exist, re-enter the command.

2622-125  program_name: 2622-125 Failed to create resources from the specified managed resource input file "input_file_name".
Explanation: Failed to create resources from the specified resource file.
User response: Correct the associated error with this and, re-enter the command.

2622-126  program_name: 2622-126 None of the nodes specified exists in the cluster.
Explanation: The specified node names do not exist in the cluster.
User response: Check the node names and issue the command again.

2622-127  program_name: 2622-127 Fixed resource "resource_name" is not allowed to have an ExcludedList.
Explanation: The specified fixed resource can not be moved, therefore point less to carry an ExcludedList.
User response: Add all the fixed resources without an ExcludedList.

2622-128  program_name: 2622-128 None of the specified managed resources were created.
Explanation: None of the specified managed resources were created because they were fixed resources.
User response: Add all the fixed resources without an ExcludedList or Policy.
2622-141  program_name: 2622-141 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-142  program_name: 2622-142 No selection string was entered for resource class "resource_class".
Explanation: Selection string was not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-161  program_name: 2622-161 Must change attributes of member resources.
Explanation: At least one of the member resource attributes must be changed when using chrgmbr command.
User response: Enable the appropriate options to change required attributes of resource group.

2622-162  program_name: 2622-162 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-163  program_name: 2622-163 No selection string was entered for Resource class "resource_class".
Explanation: Selection string was not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-164  program_name: 2622-164 None of the specified member resources are from the allowed nodes for resource group "resource_group".
Explanation: All of the specified resources are not in the allowed node list of the new resource group.
User response: Member resources must be part of the allowed node list of resource group.

2622-165  program_name: 2622-165 The specified node "excluded_node" does not exist in the list.
Explanation: The specified node name does not exist in the excluded node list.
User response: Check the node name and issue the command again.

2622-166  program_name: 2622-166 The specified node "excluded_node" already exists in the list.
Explanation: The specified node name already exists in the excluded node list.
User response: Check the node name and issue the command again.

2622-167  program_name: 2622-167 None of the nodes specified exists in the list.
Explanation: The specified node names do not exist in the excluded node list.
User response: Check the node names and issue the command again.

2622-168  program_name: 2622-168 None of the nodes specified exists in the cluster.
Explanation: The specified node names do not exist in the cluster.
User response: Check the node names and issue the command again.
2622-169  program_name: 2622-169 All the nodes specified already exists in the list.
Explanation: All the nodes specified nodes already exist in the excluded node list.
User response: Check the node names and issue the command again.

2622-170  program_name: 2622-170 Too many resources were specified to change to the new ExcludedList.
Explanation: Only one resource can be specified to change the excluded node list attribute.
User response: Check the resource count and issue the command again.

2622-171  program_name: 2622-171 Fixed resource "resource_name" is not allowed to have an ExcludedList or Policy.
Explanation: The specified fixed resource cannot be moved, therefore point less to carry an ExcludedList or SelectFromPolicy.
User response: Change all the fixed resources without an ExcludedList or Policy.

2622-172  program_name: 2622-172 None of the specified managed resources were created.
Explanation: None of the specified managed resources were created because they were fixed resources.
User response: Change all the fixed resources without an ExcludedList or Policy.

2622-181  program_name: 2622-181 The specified Source resource source_resource is not a member resource.
Explanation: specified Source Resource is not a member resource.
User response: Make sure the source is a member resource, then re-issue the command.

2622-182  program_name: 2622-182 The specified source resource matched from selection string "source_string" is not a member resource.
Explanation: specified source resource matched from selection string is not a member resource.
User response: Make sure the source is a member resource, then re-issue the command.

2622-183  program_name: 2622-183 Source resource "source_resource" already exists.
Explanation: Source resource cannot already exist when creating it.
User response: use chrel to make changes to the relationships related to this source resource.

2622-184  program_name: 2622-184 Source resource matched from selection string "source_resource" already exists.
Explanation: Source resource cannot already exist when creating it.
User response: use chrel to make changes to the relations related to this source resource.

2622-185  program_name: 2622-185 None of the specified source resources Exists.
Explanation: There were no source resources.
User response: None.

2622-186  program_name: 2622-186 None of the specified target resources Exists.
Explanation: There were no target resources.
User response: No action is required.
**2622-187**  
Program name: 2622-187 More than one source resources were matched for "source".

Explaination: More than one source was matched for specified source name.

User response: No action is required.

**2622-188**  
Program name: 2622-188 More than one source resource were matched using selection string "selection_string" on class_name class.

Explaination: More than one source was matched with source selection string.

User response: No action is required.

**2622-189**  
Program name: 2622-189 Specified condition is not allowed with the relationship "relationship".

Explaination: Only locate-with relationships are allowed to have conditions.

User response: No action is required.

**2622-190**  
Program name: 2622-190 The specified managed relationship input file "input_file_name" does not exist.

Explaination: Specified managed resource file name was not found.

User response: Make sure the managed relationship file name exist, re-enter the command.

**2622-191**  
Program name: 2622-191 Failed to create resources from the specified relationship input file "input_file_name".

Explaination: Failed to create resources from the specified relationship input file.

User response: Correct the associated error with this and, re-enter the command.

**2622-201**  
Program name: 2622-201 No relationships matched the query "source_query.

Explaination: Source query did not match any existing relationships.

User response: Check the query and re-run the command.

**2622-202**  
Program name: 2622-202 There are no relationships defined for source "source" matched from selection string "selection_string".

Explaination: Source resource must already have a relationship defined.

User response: use mkrel to make relationships related to this source resource.

**2622-203**  
Program name: 2622-203 None of the specified target resources exists.

Explaination: There were no target resources.

User response: No action is required.

**2622-204**  
Program name: 2622-204 None of the specified target resources have relationships with the source.

Explaination: The specified target resources were not related to the source.

User response: Re-enter the command with existing target resources for the source.

**2622-205**  
Program name: 2622-205 All of the specified target resources already have relationships with the source.

Explaination: All specified target resources already have relationship with the source.

User response: Re-enter the command with target resources that don’t already exist for the source.

Specified equivalency input file "input_file_name" does not exist.

Explanation: Specified equivalency file name was not found.
User response: Make sure the equivalency file name exist, re-enter the command.
2622-282 • 2622-305

2622-282  program_name: 2622-282 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-283  program_name: 2622-283 No Selection string was entered for Resource class "resource_class".
Explanation: Selection string was not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-284  program_name: 2622-284 Policy other than Any is not allowed with option "option_flag".
Explanation: Selection string was not entered with SelectFromPolicy Any.

2622-285  program_name: 2622-285 Failed to create resources from the specified equivalency input file "input_file_name".
Explanation: Failed to create resources from the specified equivalency input file.
User response: Correct the associated error with this and, re-enter the command.

2622-286  program_name: 2622-286 All of the specified members for equivalency "equivalency_name" are floating resources.
Explanation: All of the specified members are floating resources, but as a rule for equivalency they cannot be included as members of an equivalency.
User response: Add at least a fixed resource as a member of an equivalency.

2622-301  program_name: 2622-301 The equivalency "equivalency" already has a SelectString defined.
Explanation: There is already a SelectString defined therefore won't allow an add or delete function.
User response: Try using the overwrite function for command.

2622-302  program_name: 2622-302 No changes were made to the equivalency "equivalency".
Explanation: Specified equivalency did not change.
User response: Re-enter the command based on the information that preceded this error.

2622-303  program_name: 2622-303 At least one change must be made to the equivalency "equivalency".
Explanation: Must make a change when using this command.
User response: Specify a change to the equivalency when issuing the command.

2622-304  program_name: 2622-304 No resources were entered for resource class "resource_class".
Explanation: Resources were not entered with the command for the specified class.
User response: Enter the resources and retry the command.

2622-305  program_name: 2622-305 No selection string was entered for resource class "resource_class".
Explanation: Selection string was not entered with the command for the specified class.
User response: Enter the resources and retry the command.
2622-306  program_name: 2622-306 Policy other than Any is not allowed with option "option_flag".
Explanation: Selection string was not entered with SelectFromPolicy Any.

2622-307  program_name: 2622-307 Equivalency "equivalency" does not exist or could not be changed.
Explanation: Specified equivalency was not found or even if it was found it just could not be changed.
User response: Check the message that preceded this message for the actual cause if it already exists.

2622-308  program_name: 2622-308 All of the specified members for equivalency "equivalency_name" are floating resources.
Explanation: All of the specified members are floating resources, but as a rule for equivalency they can not be included as a members of an equivalency. The members will not be updated and will be left alone.
User response: Add at least a fixed resources as a member of an equivalency.

2622-321  program_name: 2622-321 None of the specified equivalencies were found or could not be removed.
Explanation: None of the specified equivalencies were found or just could not be removed.
User response: Check the message that preceded this message for the actual cause.

2622-322  program_name: 2622-322 Equivalency "equivalency" does not exist or could not be removed.
Explanation: Specified equivalency was not found or even if it was found it just could not be removed.
User response: Check the message that preceded this message for the actual cause if it already exists.

2622-323  program_name: 2622-323 The selection string "selection_string" did not match any equivalencies.
Explanation: The specified selection string did not match any equivalencies.
User response: Check the equivalency select string and issue the command again.

2622-341  program_name: 2622-341 No relationships matched the query "source_Query.
Explanation: Source query did not match any existing relationships.
User response: Check the query and re-run the command.

2622-342  program_name: 2622-342 There are no relationships defined that matched from selection string "selection_string".
Explanation: Selection string did not match to an existing relationship.
User response: use mkrel to make this relationships.

2622-343  program_name: 2622-343 The managed relation "selection_string" does not exist.
Explanation: The managed relation specified does not exist.
User response: Re-enter command with an existing managed relationship.

2622-344  program_name: 2622-344 There are no relationships defined.
Explanation: There are no managed relations currently defined.
User response: Re-enter command with an existing managed relationship.

2622-522  •  2661-003

2622-522  program_name: 2622-522 Invalid priority code "priority" found at file_name line line_number. Valid values are "low", "high", and "force".
Explanation: A line in the simulation input contains an invalid priority code.
User response: Correct the erroneous priority code and retry the command.

2622-523  program_name: 2622-523 Invalid action code "action" found at file_name line line_number. Valid values are "noop", "start", "stop", "move", "cancel", "failed", "online", and "offline".
Explanation: A line in the simulation input contains an invalid action code.
User response: Correct the erroneous action code and retry the command.

2622-524  program_name: 2622-524 No simulation input data found in file_name.
Explanation: The simulation input does not contain any non-comment, non-empty lines.
User response: Retry the command, submitting valid simulation data as input.

2622-525  program_name: 2622-525 samsimul action failed with return code "error_code".
Explanation: samsimul action failed to submit the simulation input data and retrieve simulation results.
User response: Refer to related error messages or return code and then rerun command \
 based on those messages.

2622-526  program_name: 2622-526 Unexpected output when running samsimul action.
Explanation: samsimul action failed to return an output of the expected format.
User response: This is an internal script error and should not occur. Report the command name, and this message to the IBM Support Center at your convenience.

2622-541  program_name: 2622-541 No resource groups defined or cluster is offline!
Explanation: Currently no resource groups defined or the cluster is offline.
User response: Define resource groups or turn the cluster online.

2661-001  Attribute "attribute_name" cannot be specified when defining a new resource.
Explanation: While attempting to create an Application resource, an attribute was encountered that is not allowed to be defined.
User response: Do not specify this attribute when attempting to create an Application resource.

2661-002  The value of the MonitorCommandPeriod attribute must be greater or equal to the value of the MonitorCommandTimeout attribute.
Explanation: While attempting to create or change an Application resource, a combination of MonitorCommandPeriod and MonitorCommandTimeout attributes was encountered that is not valid.
User response: Correct the value for either the MonitorCommandPeriod or the MonitorCommandTimeout attribute, such that the MonitorCommandPeriod is greater or equal to the MonitorCommandTimeout.

2661-003  Class name "class_name" is not recognized by this resource manager.
Explanation: The Resource Manager does not recognize the named resource class as belonging to it. This is either an internal error or indicates a corrupted RMC configuration.
User response: Record the above information and contact your software service organization.

<td><strong>User response:</strong></td>
<td>Attempt to correct the problems identified by the output from the command and retry the operation.</td>
</tr>
</tbody>
</table>
The value specified for the attribute named ProtectionMode must be either 0 or 1.

Explanation: An invalid value was specified for the attribute named ProtectionMode.

User response: Correct the value specified and retry the operation.

The command used to monitor the resource did not complete successfully, exit code is the exit value from the monitor command. Stdout = stdout generated by the monitor command Stderr = stderr generated by the monitor command

Explanation: While monitoring the operational state of a resource, the associated monitor command was executed but it did not complete successfully. The exit code, stderr and stdout are listed in the error message.

User response: Attempt to correct the problems identified by the output from the command and retry the operation.

The IP address specified is the base address for a network interface and therefore cannot be used.

Explanation: The address specified is already the base IP address for a network interface which makes it invalid for use as a service IP address.

User response: Choose a different IP address and retry the operation.

The resource "resource_name" cannot be deleted because it is online.

Explanation: The resource cannot be deleted because it is online.

User response: Make sure the resource is offline and retry the operation.

The operation cannot be completed because one or more resources from the resource class name class is online.

Explanation: The operation (stop node, stop domain or remove domain) cannot be completed because one or more resources are online on the target node(s).

User response: Make sure the resource is offline and retry the operation.

Invalid parameter format passed to the configCoordinationAll action for resource class resource class name.

Explanation: The configCoordinationAll action was received by the RM for the indicated class but the input format is not valid or not supported.

User response: This is an internal error so contact your software service organization.

An online or offline operation is not valid when the resource is in the failed offline state.

Explanation: An online or offline operation was targeted to a resource that is in the failed offline state. This is not a valid request. The only control operation that is permitted in the failed offline state is reset.

User response: Perform the reset operation against the resource and then retry the online or offline operation. The command ‘resetsrc’ can be used to reset a resource.

</table>
The value of the ResourceType attribute must be 0 or 1.

Explanation: While attempting to create or change an Application resource, a ResourceType attribute was encountered that is not valid.

User response: Correct the value for the ResourceType attribute to be either 0 (for fixed resources) or 1 (for floating resources).

The time in the Start/Stop/Move attribute must be >= 0 and < 600 (10 min)

Explanation: The specified value for this attribute is not within the allowed range.

User response: Specify a value between 0 and 600.

The value of ForceOpState must be a valid rmc opstate (0,1,2,3,4,5,6,8)

Explanation: The specified value does not match a valid rmc opstate.

User response: Specify one of the following opstates: 0,1,2,3,4,5,6,8.

Resource does not support move protocol

Explanation: The resource received a move action but does not support the move protocol.

User response: Record the above information and contact your software service organization.

Resource is not an aggregate resource

Explanation: The resource received a move action but is not an aggregate resource.

User response: Record the above information and contact your software service organization.

Resource not in move state NONE when prepare action received

Explanation: The resource received a move prepare action but is not in move state none.

User response: Record the above information and contact your software service organization.

Resource not in move state READY when complete action received

Explanation: The resource received a move complete action but is not in move state ready.

User response: Record the above information and contact your software service organization.

Complete/Cancel action or cleanup already in progress

Explanation: The complete/cancel process is already in progress.

User response: Record the above information and contact your software service organization.

Prepare action already in progress

Explanation: The prepare process is already in progress.

User response: Record the above information and contact your software service organization.

Resource not in READY or FAILED state when cancel action received

Explanation: The resource received a move cancel action but is not in move state ready or failed.

User response: Record the above information and contact your software service organization.
2662-017 • 2662-018

2662-017  Attribute "attribute_name" cannot be specified when defining a new resource.
Explanation: While attempting to create a Test resource, an attribute was encountered that is not allowed to be defined.
User response: Do not specify this attribute when attempting to create a Test resource.

2662-018  Wrong input specified for the action.
Explanation: An internal error of the TestRM.
User response: Record the above information and contact your software service organization.
Messages generated by the sampolicy command

This section lists the messages that are generated by the sampolicy command and start with the prefix SAMP. The sampolicy command may also generate messages starting with the prefix EEZ. These messages are listed in the IBM Tivoli System Automation End-to-End Automation Management Component Reference.

**SAMP0001E** An 'IOException' was caught in method methodName of class className. The received message was message.

**Explanation:** The processing was interrupted by this exception and cannot complete.

**System action:** The task is ended.

**Operator response:** Try to resolve the problem described in the exception message and resubmit the command.

**SAMP0002E** The specified policy policyLocation is not valid.

**Explanation:** The policy is not valid. You cannot perform any task with this policy.

**System action:** The current task ends.

**Operator response:** Try to make the policy valid by analyzing the error messages following this message. Then resubmit the command.

**SAMP0003E** Not able to create an object of type Object-type. The name of the tree-node is node-name.

**Explanation:** There is a problem when building an internal object of the input XML.

**System action:** The current task ends.

**Operator response:** Check for related messages. If you cannot resolve the problem contact IBM support.

**SAMP0004E** Not able to retrieve the policy information.

**Explanation:** The policy information cannot be retrieved because the policy is not valid.

**System action:** The current task ends.

**Operator response:** Try to make the policy valid by analyzing all the error messages.

**SAMP0005E** Received errors when trying to activate the policy.

**Explanation:** Policy activation task resulted in errors.

**System action:** The activation task ends.

**SAMP0006E** The specified policy file "policyFile " cannot be found.

**Explanation:** The policy cannot be loaded from this location.

**System action:** The current task ends.

**Operator response:** Verify the policy XML file name and its path.

**SAMP0007E** Original Parser Exception: exceptionMessage

**Explanation:** An internal problem occurred while parsing this policy.

**System action:** The task cannot be performed.

**Operator response:** Verify if the product is installed correctly.

**SAMP0008E** Received errors when trying to deactivate the current policy.

**Explanation:** Policy deactivation resulted in errors.

**System action:** The deactivation task ends.

**Operator response:** Analyze the error messages and try to resolve the problem.

**SAMP0009E** Received errors when trying to check the policy.

**Explanation:** Policy check task resulted in errors.

**System action:** The check task ends.

**Operator response:** Analyze the error messages and try to resolve the problem.

**SAMP0010E** Received errors when trying to save the current policy.

**Explanation:** Policy save task resulted in errors.

**System action:** The save task ends.

**Operator response:** Analyze the error messages and try to resolve the problem.
SAMP0011E  The resource with name resourceName and class className was found as member of multiple groups.

Explanation:  A resource can only be member of one group.

System action:  This policy is not valid and cannot be activated.

Operator response:  Check that each resource is only member of at most one group element in this policy.

---

SAMP0012E  The resource with name resourceName and class className was found as member of an equivalency and of a group.

Explanation:  A resource cannot be member of a group and of an equivalency.

System action:  This policy is not valid and cannot be activated.

Operator response:  Check that each resource is only member of either a group or an equivalency.

---

SAMP0013E  The specified member "memberName" was found multiple times in the same <groupForm> "groupName".

Explanation:  All <Members> child elements must be unique in one group.

System action:  This policy is not valid.

Operator response:  Check that the group has no duplicate <Members> child elements in this policy.

---

SAMP0014E  The specified <groupForm> "groupName" was found as member of itself.

Explanation:  A group cannot be member of itself.

System action:  This policy is not valid.

Operator response:  Check that no group is member of itself in this policy.

---

SAMP0015E  The resource group with name resourceGroupName has a nesting level of more than 50.

Explanation:  The nesting level of a resource group is limited to 50.

System action:  This policy is not valid and cannot be activated.

Operator response:  Reduce the nesting level of this group and resubmit the command.

---

SAMP0016E  An 'Exception' was caught in method methodName of class className. The received message was message.

Explanation:  The processing was interrupted by this exception and cannot complete.

System action:  The task is ended.

Operator response:  Try to resolve the problem described in the exception message and resubmit the command.

---

SAMP0017E  The relationship with the source with name sourceName and type type has a target with the same key.

Explanation:  A relationship cannot have the same source and target.

System action:  This policy is not valid and cannot be activated.

Operator response:  Correct the relationship and resubmit the command.

---

SAMP0018E  The relationship source with name sourceName and class sourceClass is not a resource group nor member of a resource group.

Explanation:  A relationship source must either be a resource group or member of a resource group.

System action:  This policy is not valid and cannot be activated.

Operator response:  Correct the relationship and resubmit the command.

---

SAMP0019E  An error occurred in method methodName of class className. Error details details.

Explanation:  The processing was interrupted by this error and cannot complete.

System action:  The task is ended.

Operator response:  Try to resolve the problem described in the error details and resubmit the command.

---

SAMP0020E  The specified <Relationship> with the <Type> "relationType", the <Source> with the name "source" and the <Target> with the name "target" was found multiple times in the policy document.

Explanation:  All <Relationship> elements must be unique.

System action:  This policy cannot be activated.

Operator response:  Check that at most one
<Relationship> of this type is specified in this policy.

**SAMP0021E**  
A '<UTF8DataFormatException' was caught in method 'methodName' of class 'className'. The received message was 'message'.

**Explanation:** The processing was interrupted by this exception and cannot complete.

**System action:** The task cannot be performed.

**Operator response:** Ensure the correct data format of the policy document by only using editors which create UTF-8 conform documents.

**SAMP0022E**  
A '<Element> can only contain either a '<subElement1>' or a '<subElement2>'.

**Explanation:** It is not allowed to specify both kinds of sub-elements for this element.

**System action:** This policy cannot be activated.

**Operator response:** Check that at only one of the conflicting sub-elements is specified in this policy.

**SAMP0023E**  
A '<Element> that contains a '<subElement1>' must also contain a '<subElement2>'.

**Explanation:** It is not allowed to specify only one of these sub-elements for this element.

**System action:** This policy cannot be activated.

**Operator response:** Check that both sub-elements are specified in this policy.

**SAMP0024E**  
A '<Element> that contains a '<subElement1>' must also contain a '<subElement2>' or a '<subElement3>'.

**Explanation:** It is not allowed to specify only one of these sub-elements for this element.

**System action:** This policy cannot be activated.

**Operator response:** Check that both sub-elements are specified in this policy.

**SAMP0025E**  
The '<Element> with the name 'referenceName' refers to a resource that does not exist on the cluster.'

**Explanation:** Every resource that is referenced within the policy must exist in the cluster.

**System action:** This policy cannot be activated.

**Operator response:** Create the resource on the cluster then resubmit the command.

**SAMP0026E**  
The node with the name "nodeName" does not exist on the cluster.

**Explanation:** Every node that is referred to within the policy must exist in the cluster.

**System action:** This policy cannot be activated.

**Operator response:** Correct the value of the node in the policy then resubmit the command.

**SAMP0027E**  
The node with the name "nodeName" is not online in the cluster.

**Explanation:** Every node that is referred to within a resource attribute must be online in the cluster.

**System action:** This policy cannot be activated.

**Operator response:** Correct the value of the node in the policy or make the node online then resubmit the command.

**SAMP0028E**  
The value "domainName" of the element '<elementName>' does not conform to the real name of the cluster "actualDomainName".

**Explanation:** The name of the cluster specified in the policy must be equal to the real name.

**System action:** This policy cannot be activated.

**Operator response:** Correct the value in the policy then resubmit the command.

**SAMP0029E**  
The specified element '<element>' with the name "groupName" contains a member with a different name "memberName".

**Explanation:** For this kind of group all '<Members>' child elements must have the same name as the group itself.

**System action:** This policy is not valid.

**Operator response:** Check that the groups name is equal to all '<Members>' child elements names in this policy.

**SAMP0030E**  
The specified element '<element>' was found more than once.

**Explanation:** Only zero or one element of this type is allowed in the policy.

**System action:** This policy cannot be activated.

**Operator response:** Check that at most one element of this type is specified in the policy.
SAMP0031E
The specified element `<childElement>` was found more than once as child element of `<parentElement>`.

**Explanation:** Only zero or one element of this type is allowed.

**System action:** This policy cannot be activated.

**Operator response:** Check that at most one element of this type is specified in this policy.

SAMP0032E
The specified element `<childElement>` was found more than once as child element of `<parentElement>` with the name "parentName".

**Explanation:** Only zero or one element of this type is allowed in this group.

**System action:** This policy cannot be activated.

**Operator response:** Check that at most one element of this type is specified in this group in this policy.

SAMP0033E
The value "value" of the element `<allowedNodes>` does not exist as a node, nor is an equivalency with this name defined.

**Explanation:** This value must either be a node or the name of an equivalency.

**System action:** This policy is not valid and cannot be activated.

**Operator response:** Correct the policy and resubmit the command.

SAMP0034E
The element `<element>` with the name "equivalencyName" cannot be target of a location relationship.

**Explanation:** A location relationship cannot have a target element of that kind.

**System action:** This policy is not valid and cannot be activated.

**Operator response:** Correct the relationship and resubmit the command.

SAMP0035E
The element `<element>` with the value "elementValue" can only be used with a location relationship except the relationship of the type "isStartableType".

**Explanation:** A condition is not allowed for this kind of relationship.

**System action:** This policy is not valid and cannot be activated.

SAMP0036E
The element `<element>` with the name "elementValue" has got members that are not from the same resource class.

**Explanation:** All members of an equivalency must be from the same resource class.

**System action:** This policy is not valid and cannot be activated.

**Operator response:** Correct the equivalency and resubmit the command.

SAMP0037E
The connection to the backend failed because the following exception occurred: exception.

**Explanation:** An exception occurred when trying to perform an operation on the backend.

**System action:** The policy cannot be activated.

**Operator response:** Try to analyze the exception description and try to correct the problem. If the problem persists, contact IBM support.

SAMP0038E
The element `<tie-breaker>` with the name "name" is set to active although at least one other element of this kind is set to active, too.

**Explanation:** Only one such element is allowed to be active.

**System action:** The policy cannot be activated.

**Operator response:** Ensure there is at most one active element of this kind in the policy and resubmit the command.

SAMP0039E
The specified element `<element>` with the value "value" of the subelement `<subelement1>` cannot contain a subelement `<subelement2>` as well.

**Explanation:** For this kind of element some subelements are not allowed for certain subelement values.

**System action:** This policy is not valid.

**Operator response:** Remove the invalid subelement or change the value of the other subelement and resubmit the command.

SAMP0040E
An IOException was caught when trying to write the policy to the file "filename". The exception message was: exception-message.

**Explanation:** The file could not be written.
**System action:** The active task ends.

**Operator response:** Ensure the directory does exist and there is enough disk space available then resubmit the command.

---

**SAMP0041E** Exception occurred when trying to validate the selection string "selectString". Either the selection string is not valid or the connection to the backend failed.

**Explanation:** An exception occurred when trying to validate the selection string.

**System action:** The policy cannot be activated.

**Operator response:** Ensure the selection string is valid. Try to analyze the exception description and try to correct the problem. If the problem persists, contact IBM support.

---

**SAMP0042E** The <Element> with the name "referenceName" has an invalid value for the subelement <Sub-Element>.

**Explanation:** <ResourceReference> elements may not have one of the following values for their <Class> subelement: IBM.Application, IBM.ServiceIP, IBM.Test.

**System action:** This policy cannot be activated.

**Operator response:** Correct the subelement value then resubmit the command.

---

**SAMP0043E** The <Element> with the type "value" is not allowed on a "value" system.

**Explanation:** The processing was interrupted by this error and cannot complete.

**System action:** This policy cannot be activated.

**Operator response:** Correct the value then resubmit the command.

---

**SAMP0044E** A <Element> must either contain a <Subelement> or a <Subelement>.

**Explanation:** The processing was interrupted by this error and cannot complete.

**System action:** This policy cannot be activated.

**Operator response:** Correct the element then resubmit the command.

---

**SAMP0049E** An error occurred in class: className method: methodName. The resource resourceName could not be defined. The received exception was exception

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy document and restart the activation. Please contact IBM support, if the problem persists and provide logs and traces.

---

**SAMP0050E** An error occurred in class: className method: methodName. The resource resourceName could not be defined. The received exception was exception

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to find out, if this resource was described properly in the XML policy document and restart the activation. Please contact IBM support, if the problem persists and provide logs and traces.

---

**SAMP0051E** An error occurred in class: className method: methodName. The resource resourceName could not be added to the resource group groupName. The received exception was exception

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to solve the problem described in the exception message and resubmit the command.

---

**SAMP0052E** An error occurred in class: className method: methodName. The resource group groupName could not be set to the desired state state. The received exception was exception

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to solve the problem described in the exception message and resubmit the command.

---

**SAMP0053E** An error occurred in class: className method: methodName. The resource resourceName could not be undefined. The received exception was exception

**Explanation:** The resource might have been deleted before by internal commands.

**System action:** The policy activation or deactivation will continue.
SAMP0054E • SAMP0060E

**Operator response:** Try to verify, if the resource still exists. Analyze the exception and try to resubmit the command.

---

**SAMP0054E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be identified and located. This can be caused by an exception or the resource could not be found. Therefore the resource `resourceName` cannot be added to the resource group `groupName`. The received exception was `exception`.

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to solve the problem described in the exception message and resubmit the command.

---

**SAMP0055E** An error occurred in class: `className` method: `methodName`. The resource group `groupName` could not be identified and located. This can be caused by an exception or the resource could not be found. Therefore the resource group `groupName` cannot be set to the state `state`. The received exception was `exception`.

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to solve the problem described in the exception message and resubmit the command.

---

**SAMP0056E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be identified and located. This can be caused by an exception or the resource could not be found. Therefore the resource `resourceName` cannot be created, because it requires resource `resourceName`. The received exception was `exception`.

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will not complete.

**Operator response:** Try to solve the problem described in the exception message and resubmit the command.

---

**SAMP0057E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be identified and located. This can be caused by an exception or the resource could not be found. Therefore the resource `resourceName` cannot be deleted. The received exception was `exception`.

**Explanation:** The resource might have been deleted before by internal commands.

**System action:** The current process will continue.

**Operator response:** Try to verify, if the resource still exists. Analyze the exception and try to resubmit the command.

---

**SAMP0058E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be identified and located. This can be caused by an exception or the resource could not be found. Therefore the resource `resourceName` cannot be modified. The received exception was `exception`.

**Explanation:** The process was interrupted by this exception and cannot complete.

**System action:** The current process will continue.

**Operator response:** Try to verify, if the resource still exists. Analyze the exception and try to resubmit the command.

---

**SAMP0059E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be modified. There was no exception, but the define call did not return any object either.

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy.

---

**SAMP0060E** An error occurred in class: `className` method: `methodName`. The resource `resourceName` could not be modified. The received exception was `exception`.

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy and restart.
the activation. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0061E**  
An error occurred in class: `className`  
method: `methodName`. The IBM.TieBreaker resource `resourceName` could not be identified and located. The received exception was `exception`

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy and restart the activation. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0062E**  
An error occurred in class: `className`  
method: `methodName`. The active IBM.TieBreaker resource `resourceName` could not be identified and located. Therefore the IBM.TieBreaker resource `resourceName` could not be modified or created. The received exception was `exception`

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy and restart the activation. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0063E**  
An error occurred in class: `className`  
method: `methodName`. The subscription from consumer `consumer` to resource `resourceName` has failed. The received exception was `exception`

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy activation process stops and will return with this error message.

**Operator response:** Try to find out, if this resource was described properly in the XML policy and restart the activation. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0070E**  
An error occurred in class: `className`  
method: `methodName`.

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy deactivation process stops and will return with this error message.

**Operator response:** Try to submit the command, again. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0071E**  
An error occurred in class: `className`  
method: `methodName`.

**Explanation:** The current process was interrupted by this exception and cannot complete.

**System action:** The policy save process stops and will return with this error message.

**Operator response:** Try to submit the command, again. Please contact IBM support, if the problem persists and provide logs and traces.

**SAMP0500W**  
The specified policy `policyLocation` contains no resource group.

**Explanation:** The policy is valid, but without a resource group there is no automation active.

**System action:** Processing continues.

**Operator response:** Ensure this is what you want to do. Otherwise change the policy to contain at least one resource group and resubmit the command.

**SAMP0501W**  
An ‘Exception’ was caught in method `methodName` of class `className`. The received message was `message`.

**Explanation:** The processing was interrupted by this exception but it can continue.

**System action:** Processing continues.

**Operator response:** Try to resolve the problem described in the exception message.
The two <Relationship> elements with <Type> "StartAfter" and <Type> "StopAfter" were found with the same <Source> with the name "source" and <Target> with the name "target".

**Explanation:** The two <Relationship> elements with <Type> "StartAfter" and <Type> "StopAfter" should not have the same <Source> and <Target>. With this configuration the <Target> is started before the <Source> and the <Target> is stopped before the <Source>.

**System action:** Application continues.

**Operator response:** Verify this behavior. The common usage of "StartAfter" together with "StopAfter" is the following: 1. The <Source> of the "StartAfter" is the <Target> of the "StopAfter". 2. The <Target> of the "StartAfter" is the <Source> of the "StopAfter".

---

All members of the group with the name "groupName" should be collocated, because the group is part of a location relationship or of a relationship of the type "dependsOnType". Set the value of the groups tag <memberLocation> to "collocatedValue".

**Explanation:** For these kinds of relationships all members of a source or target group should be collocated.

**System action:** Application continues.

**Operator response:** Check that all members of this group are collocated in this policy.

---

The specified <Relationship> with <Type> "relationType" and <Source> with the name "SourceName" and <Target> with the name "Target" was found in a loop.

**Explanation:** <Relationship> elements of the same <Type> where one <Relationship> element <Target> is the next <Relationship> element <Source> should not form a loop.

**System action:** Application continues.

**Operator response:** Check that the <Relationship> elements are not defined as loop in this policy.

---

A <Relationship> with the <Type> "relationType" was found that has linked more than 100 resources.

**Explanation:** The numbers of resources linked by a relationship is limited to 100.

**System action:** Application continues.

**Operator response:** Reduce the number of resources linked by the relationship.

---

The specified element <elements> with the value "value" of the subelement <subelement1> should not contain a subelement <subelement2> as well. This subelement is ignored.

**Explanation:** For this kind of element some subelements are not supported for certain subelement values.

**System action:** Application continues. Subelement is ignored.

**Operator response:** Remove the invalid subelement or change the value of the other subelement.

---

The resource group with name resourceName has linked more than 100 resources.

**Explanation:** The numbers of resources linked by a resource group is limited to 100.

**System action:** Application continues.

**Operator response:** Reduce the number of resources linked by this group.

---

An error occurred in method methodName of class className. Error details details.

**Explanation:** The processing was interrupted by this error but it can continue.

**System action:** Processing continues.

**Operator response:** Try to resolve the problem described in the error details.

---

A non-critical error occurred in method methodName of class className during activation of a new policy. Error details details.

**Explanation:** The processing was interrupted by this error but it can continue.

**System action:** Activation continues.

**Operator response:** Try to resolve the problem described in the error details. Please try to activate the policy again and check, if the error still occurs. If the error persists, please contact IBM support and provide logs and traces.

---

A non-critical error occurred in method methodName of class className during deactivation of the current policy. Error details details.
**SAMP0511W • SAMP1104I**

**Explanation:** The processing was interrupted by this error but it can continue.

**System action:** Deactivation continues.

**Operator response:** Try to resolve the problem described in the error details. Please try to deactivate the policy again and check, if the error still occurs. If the error persists, please contact IBM support and provide logs and traces.

---

**SAMP0511W A non-critical error occurred in method methodName of class className during saving of the current policy. Error details details.**

**Explanation:** The processing was interrupted by this error but it can continue.

**System action:** Saving process continues.

**Operator response:** Try to resolve the problem described in the error details. Please try to resubmit the save command and check, if the error still occurs. If the error persists, please contact IBM support and provide logs and traces.

---

**SAMP1000I Usage:**
- sampolicy -h
- sampolicy [-T] [-V] -a filename
- sampolicy [-T] [-V] -d
- sampolicy [-T] [-V] -s [filename]
- sampolicy [-T] [-V] -c filename
- sampolicy [-T] [-V] -i filename

**Explanation:** No additional information is available for this message.

---

**SAMP1001I The specified policy policyLocation is valid.**

**Explanation:** The policy is valid and can be activated.

**System action:** Processing continues.

**Operator response:** None.

---

**SAMP1002I The policy has the following policy information: policyInfo.**

**Explanation:** This is the information for the policy.

**System action:** Processing continues.

**Operator response:** None.

---

**SAMP1003I The policy has been activated successfully.**

**Explanation:** The policy is now active in the domain.

**System action:** Processing continues.

**Operator response:** None.

---

**SAMP1004I The activation task ends.**

**Explanation:** The policy is not going to be activated because the user did not confirm this action.

**System action:** Processing ends.

**Operator response:** None.

---

**SAMP1005I The activation task ends.**

**Explanation:** The policy is not going to be activated.

**System action:** Processing ends.

**Operator response:** None.

---

**SAMP1006I The current policy has been saved to file filename.**

**Explanation:** No additional information is available for this message.

---

**SAMP1007I The policy has been deactivated successfully.**

**Explanation:** There is now no policy active in the domain.

**System action:** Processing continues.

**Operator response:** None.

---

**SAMP1100I Starting to check policy policyLocation.**

**Explanation:** No additional information is available for this message.

---

**SAMP1101I Starting to load policy.**

**Explanation:** No additional information is available for this message.

---

**SAMP1102I Retrieving policy info of policyLocation.**

**Explanation:** No additional information is available for this message.

---

**SAMP1103I Are you sure you want to activate a new policy?**

**Yes (y) or No (n) ?**

**Explanation:** No additional information is available for this message.

---

**SAMP1104I Deactivation will remove all resources which can be created via policy activation. Deactivation will not change any resources of the class IBM.TieBreaker Are you sure you want to deactivate the current policy?**

**Yes (y) or No (n) ?**
SAMP1105I • SAMP1108I

Explanation: No additional information is available for this message.

SAMP1105I Please enter the root password:
Explanation: No additional information is available for this message.

SAMP1106I Now calling the backend in order to retrieve all data needed.
Explanation: No additional information is available for this message.

SAMP1107I Now calling the backend in order to activate the policy.
Explanation: No additional information is available for this message.

SAMP1108I Now calling the backend in order to deactivate the policy.
Explanation: No additional information is available for this message.
Messages generated by the System Automation for Multiplatforms end-to-end automation adapter and the HACMP adapter

This section lists the messages which are generated by the plug-in of the end-to-end automation adapter or the HACMP adapter and have the prefix SAMA. The adapter command may also generate messages with the prefix EEE. These messages are listed in the IBM Tivoli System Automation for Multiplatforms End-to-End Automation Management Component Reference.

SAMA0001E Failed to load library: lib, message is: msg.
Explanation: Loading a library failed. Either the library or a prerequisite library is not available.
System action: The automation adapter will not start.
Operator response: Try to identify which library cannot be loaded using the following steps. Use ‘find -name’ to find the library. Use ‘ldd’ library’ to determine which library is not available.

SAMA0002E Domain domain went offline and the automation adapter is stopped.
Explanation: An event indicated that the domain went offline. The automation adapter can only operate with a domain that is online. Therefore, the automation adapter is stopped.
System action: The automation adapter does not accept any further requests. The automation adapter is stopped.
Operator response: If the automation adapter is automated no action is required and it will be restarted when the domain comes back online. If the automation adapter is not automated, restart it using command ‘samadapter start’ after the domain has become online. Use command ‘samadapter status’ to find out if the automation adapter is automated.

SAMA0003E Request req must not be applied on automated adapter resource res.
Explanation: Automated resources that control the adapter cannot accept such request because it prevents correct automation of the adapter. For example, setting the adapter ‘Offline’ will cause the domain to become unreachable from the administration console.
System action: The request was not performed.
Operator response: Use only supplied scripts ‘samadapter start’ and ‘samadapter stop’ to control the adapter from one of the nodes in the SAMP domain.

SAMA0004E Request req failed on resource res with message: msg.
Explanation: The request could not be performed on the resource. The reason may be found in the message.
System action: The request was not performed.
Operator response: Examine the message for the reason why the request failed.

SAMA0005E Unable to build command from request req for resource res.
Explanation: The request could not be built for the resource. The reason may be that the command is not allowed on this type of resource.
System action: The request was not performed.
Operator response: A program has issued a request that is not supported for the resource. Have IBM support analyse the problem.

SAMA0006E Failed to reset resource res, message is: msg.
Explanation: An error occurred, when trying to reset the resource that was marked non recoverable. The reason may be found in the message.
System action: The request to reset the resource was not performed.
Operator response: Examine the message for the reason why the reset failed.

SAMA0007E Failed to obtain members of group res, message is: msg.
Explanation: An error occurred, when trying to obtain the members for resource. The reason may be found in the message.
System action: Due to the error no members contained in the resource were returned.
Operator response: Examine the message for the reason why obtaining contained resource failed.

SAMA0008E Failed to get top level resources, message is: msg.
Explanation: An error occurred, when trying to obtain resources that are not contained in other resources. The reason may be found in the message.
System action: Due to the error no resources were returned.
Operator response: Examine the message for the
reason why obtaining top level resource failed.

SAMA0009E Cannot establish remote access for operating console in direct mode, message is msg.

Explanation: Access from a remote operating console over RMI was specified in sam.adapter.plugin.properties. Attempting to provide the direct access failed.

System action: The adapter is not reachable from a remote operating console.

Operator response: Examine the message. Check the configuration of the adapter for direct access from a remote operating console.

SAMA0010E Failed to exclude node node from automation, message is msg.

Explanation: An error occurred, when trying to exclude the node from automation. The reason may be found in the message.

System action: Excluding the node was not performed.

Operator response: Examine the message for the reason why excluding the node failed.

SAMA0011E Failed to unsubscribe resource res, message is msg.

Explanation: An error occurred, when trying to remove the subscription for the resource. The reason may be found in the message.

System action: The subscription may not have been removed.

Operator response: Examine the message for the reason why removing the subscription failed.

SAMA0013E Failed establish a session, message is msg.

Explanation: Trying to establish an RMC session with the backend failed. Therefore, the request cannot be satisfied.

System action: No session with RMC is established.

Operator response: Examine the message to find out why the RMC session failed.

SAMA0016E Failed to include node node into automation, message is msg.

Explanation: An error occurred, when trying to include the node into automation. The reason may be found in the message.

System action: Including the node was not performed.

Operator response: Examine the message for the reason why including the node failed.

SAMA0018E Failed to subscribe resource res, message is msg.

Explanation: An error occurred, when requesting a subscription for the resource. The reason may be found in the message.

System action: The subscription has not been made.

Operator response: Examine the message for the reason why requesting the subscription failed.

SAMA0019E Failed to obtain details for domain domain, message is msg.

Explanation: The domain was retrieved successfully, but trying to obtain associated class information failed. The reason may be found in the message.

System action: The information for the domain is missing.

Operator response: Examine the message for the reason why obtaining the additional information failed.

SAMA0020E Failed to validate resource: grp.

Explanation: The resource for which a request was made does not exist.

System action: The request is not performed.

Operator response: Use list commands to verify that the resource exists. If it does not exist, the resource had been removed. If it exists the request should be repeated.

SAMA0022E Failed to get resource relationships, message is msg.

Explanation: An error occurred when trying to get relationships between resources. The reason may be found in the message.

System action: No relationships were returned.

Operator response: Examine the message for the reason why the request failed.

SAMA0023E Failed to lookup resources, message is msg.

Explanation: An error occurred when trying to identify resources. The reason may be found in the message.

System action: No resource were returned.

Operator response: Examine the message for the reason why the request failed.
SAM0024E  Failed to get resources based on filter,
filter, message is: msg.
Explanation: An error occurred when trying to get
resources based on a filter. The reason may be found in
the message.
System action: No filtered resource were returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0025E  Failed to get the parent resource for res,
message is msg.
Explanation: An error occurred when trying to get
parent of the resource. The reason may be found in
the message.
System action: The parent resource was not returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0026E  Failed to get the resources on node node,
message is msg.
Explanation: An error occurred when trying to get the
resources that can run on the node. The reason may be
found in the message.
System action: No resources on that node were
returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0027E  Failed to refresh resources, message is msg.
Explanation: An error occurred when trying to refresh
resources. The reason may be found in the message.
System action: No resource were refreshed.
Operator response: Examine the message for the
reason why the request failed.

SAM0028E  Failed to get nodes of the domain, message is msg.
Explanation: An error occurred when trying to get the
nodes in the domain. The reason may be found in the
message.
System action: No nodes were returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0029E  Failed to get nodes from an equivalency,
message is msg.
Explanation: An error occurred when trying to get the
nodes from an equivalency. The reason may be found in
the message.
System action: No nodes were returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0030E  Failed to get nodes excluded from
automation, message is msg.
Explanation: An error occurred when trying to get the
nodes that are excluded from automation. The reason
may be found in the message.
System action: No nodes were returned.
Operator response: Examine the message for the
reason why the request failed.

SAM0031E  Failed to enable event publishing in
first-level automation manager, message is msg.
Explanation: The reason for failing to enable
publishing may be an inoperative IBM.RecoveryRM.
Details may be found in the message.
System action: Event publishing was not enabled.
Operator response: Examine the message for the
reason why enabling event publishing failed.

SAM0032E  Adapter stops because domain domain is
going offline.
Explanation: The adapter was notified by an event,
that the domain is going offline. The adapter cannot
continue to exist if the domain is offline. Therefore, the
adapter is stopped.
System action: The adapter is stopped.
Operator response: If the domain went offline
unexpectedly determine the reason. The domain can be
restarted using command ‘startpmdomain
<domain-name>’. If the domain is online and the
adapter is automated it will restart automatically.
Otherwise, issue command ‘samadapter start’ to restart
the adapter.

SAM0033E  Request request is not implemented.
Explanation: The request is currently not supported
System action: The request is not performed
Operator response: Check if a more recent version of
the automation adapter is available that supports the
request.
SAMA0037E • SAMA0046E

SAMA0037E No domain that is online was detected. Automation adapter is stopped.
Explanation: No online domain was found or an error occurred when trying to query the domain. The automation adapter can only operate with a domain that is online. Therefore, the automation adapter is stopped.
System action: The automation adapter does not accept any further requests. The automation adapter is stopped.
Operator response: If the automation adapter is automated no action is required and it will be restarted when the domain comes back online. If the automation adapter is not automated, restart it using command ‘samadapter start’ after the domain has become online. Use command ‘samadapter status’ to find out if the automation adapter is automated.

SAMA0038E Request req on resource res returned with code: rc, and error message: error.
Explanation: The request returned with a non zero return code which indicates that it has not been successfully performed. The reason may be found in the message.
System action: The request was not performed.
Operator response: Examine the message for the reason why the request failed.

SAMA0039E Request req on resource res returned without result.
Explanation: The request did not respond with return code and message.
System action: Most likely the request was not performed.
Operator response: None. If the error persists. Examine the trace for other messages around that time.

SAMA0040E Login for user-ID user failed for an unknown reason, message is: msg
Explanation: The user-ID and password validation could not be performed because PAM returned with an error.
System action: NO requests will be accepted for this user-ID.
Operator response: Examine the message. Try to login again. Make sure you type the user-ID and password using correct upper and lower case characters.

SAMA0041E Login for user-ID user failed, message is: msg
Explanation: The user-ID and password failed validation on the node where the login was performed.
System action: NO requests will be accepted for this user-ID.
Operator response: Examine the message. Try to login again. Make sure you type the user-ID and password using correct upper and lower case characters.

SAMA0042E Login for user-ID user failed, because the user account expired, message is: msg
Explanation: The user account is expired.
System action: The request was not performed.
Operator response: Have the system administrator change the expiration date of the user account.

SAMA0043E Login for user-ID user failed, because the password expired, message is: msg
Explanation: The password is expired. Have the system administrator change the expiration date.
System action: The request was not performed.
Operator response: Have the password changed.

SAMA0044E Programming error detected, message is error-msg.
Explanation: The automation adapter detected an error that cannot be handled.
System action: A request may not have been processed.
Operator response: Contact IBM support with diagnostic information of the automation adapter.

SAMA0045E Failed to get nodes for resource group res, message is msg.
Explanation: An error occurred when trying to get nodes on which the resource group can run. The reason may be found in the message.
System action: The nodes were not returned.
Operator response: Examine the message for the reason why the request failed.

SAMA0046E Resource group res is already online on node node.
Explanation: Trying to start a resource group failed, because it is already online on that node. The state of the resource group was offline at the time when Request online was selected, but had changed to online
when the request was tried to process.

**System action:** The online request is not performed, because the resource group is already online.

**Operator response:** Since the goal was to have the resource group online on the node, no further action is required.

---

**SAMA0047E** Resource group *res* is already online on node *online-node* and therefore cannot be started on node *requested-node.*

**Explanation:** Trying to start a resource group on a specific node failed, because it is already online on another node.

**System action:** The online request is not performed.

**Operator response:** Check on which node the resource group is online. If the resource group must be online on another node, first bring offline on the node where it is online. Then repeat the online request on the other node.

---

**SAMA0048E** Adapter stops because domain *domain* is going offline.

**Explanation:** The adapter was notified by an event, that the domain represented by the cluster services had been stopped. The adapter cannot continue to exist on a node where the cluster services have been stopped. Therefore, the adapter is stopped.

**System action:** The adapter is stopped.

**Operator response:** If the cluster services stopped unexpectedly determine the reason. The cluster services can be restarted using smitty hacmp. If the cluster services are started the adapter is automated it will restart automatically. Otherwise, issue command 'hacadapter start' to restart the adapter.

---

**SAMA0049E** No domain that is online was detected. Automation adapter is stopped.

**Explanation:** The domain represented by the cluster services was not found online or an error occurred trying to query the domain. The automation adapter can only operate with a domain that is online. Therefore, the automation adapter is stopped.

**System action:** The automation adapter does not accept any further requests. The automation adapter is stopped.

**Operator response:** If the automation adapter is automated by HACMP no action is required and it will be restarted when the domain comes back online. If the automation adapter is not automated, restart it using command 'hacadapter start'. Use command 'hacadapter status' to find out if the automation adapter is automated.

---

**SAMA0050E** Request *req* is not allowed, because domain *cluster* has SubState: *state*.

**SubState:** STABLE is required.

**Explanation:** The request can only be performed if the domain (cluster) is in SubState: STABLE.

**System action:** The automation adapter does not accept the request.

**Operator response:** Wait until the domain has reached SubState: STABLE. To check the SubState in the operations console select the domain and inspect the Cluster-SubState in tab Additional Info. Select Refresh all before inspecting the Cluster-SubState again. If the SubState does not change to STABLE within reasonable time use smitty hacmp > Problem determination to resolve the condition.

---

**SAMA0051E** Request *req* on resource *res* has already been submitted and is currently being performed.

**Explanation:** The request is pending in its execution and therefore will not be submitted again.

**System action:** The request was not performed.

**Operator response:** Wait for the pending command to complete. State changes in the resource may indicated that it has completed. If the log requires attention, view the log to see if the request failed.

---

**SAMA0500W** Event of type *type* are not processed in this version.

**Explanation:** The event of this type is not supported.

**System action:** The event is not processed.

**Operator response:** Check if a more recent version of the automation adapter is available that supports this type of event.

---

**SAMA0501W** Closing session failed.

**Explanation:** An error was encountered, when the session with RMC was closed.

**System action:** The session may not have been closed.

**Operator response:** None.

---

**SAMA0502W** Unable to locate resource with name: *name*, *class*: *class*, *node*: *node*.

**Explanation:** The resource described in an event by name, class, and node could not be found.

**System action:** The resource is not updated with event information.

**Operator response:** None.
Automation mode on domain domain has changed from mode1 to mode2.

Explanation: The automation mode can be Auto (resources are automated) or Manual (resources are only monitored).

System action: None.

Operator response: None.

Command reset from non-recoverable error has been performed on resource res on behalf of user userid.

Explanation: A user found a resource flagged with non-recoverable error by automation, which means the resource is not automated until a user issued the reset.

System action: The reset has been issued to the resource.

Operator response: No action is required. You can verify in the operations console if the resource is no more in error.

Command request has been performed on resource res with return code: rc on behalf of user userid with comment: comment.

Explanation: A user has issued a command that requests a change of the resource state. This command is being performed by automation on the indicated resource.

System action: The command has been issued to the resource.

Operator response: No action is required. You can verify in the operations console if the resource changed it state.

Node node has been excluded from automation on behalf of user userid.

Explanation: A user has requested to exclude the node from automation. See 'System action below'.

System action: Resources on that node are stopped by automation. Then automation tries to restart the resources on other nodes in the domain.

Operator response: No action is required. You can verify in the operations console if the resources had been restarted on other nodes in the domain, or that their new state is acceptable.

Node node has been included into automation on behalf of user userid.

Explanation: A user has requested to include the node into automation. See 'System action below'.

System action: Once the node has been included into automation, automation may try to start resources on the node.

Operator response: No action is required. You can verify in the operations console if resources are automated on the included node.

- samsimul 84
- sampolicy 88
- samsimulm 90
- uninstallSAM 92
- ConstituentResource XML element 107
- ControllInformation XML element 104

### D
- data types (continued)
  - used for literal values 94
- Description XML element 122

### E
- e-mail address vii
- Equivalency XML element 112
- expressions
  - operators for 96
- pattern matching supported in expressions 100
- using 93

### H
- highlighting vii
- how to use this book v

### I
- IBM Tivoli System Automation commands 3
- IBM.ApplicationAttributes XML element 115, 116
- IBM.ServiceIPAttributes XML element 117
- IBM.TestAttributes XML element 118
- IBM.TieBreaker XML element 119
- InfoLink XML element 123
- installSAM command 24
- ISO 9000 vii

### L
- lssequ command 26
- lsrel command 30
- lsrg command 36
- lsrgreq command 41
- lssam command 44
- lssamctrl command 47

### M
- Member XML element 121
- mkequ command 49
- mkrel command 53
- mkrg command 58
- modifying predefined expressions 93
- MoveGroup XML element 106

### O
- operator precedence 98
- operators available for use in expressions 96
- Owner XML element 122

### P
- pattern matching supported in expressions 100
- pidmon command 61
- Policy XML reference 101
- PolicyAuthor XML element 103
- PolicyDescription XML element 103
- PolicyInformation XML element 103
- PolicyName XML element 103
- PolicyToken XML element 103
- precedence of operators 98
- predefined expressions
  - modifying 93
- prereqSAM command 63

### R
- Relationship XML element 110
- Resource XML element 105
- ResourceGroup XML element 108
- ResourceReference XML element 114
- rgmbreq command 64
- rgreq command 67
- rmsequ command 70
- rmerel command 72
- rmrg command 76
- rmrgmbr command 78
- RSCT command 3

### S
- samctrl command 81
- samsimul command 84
- sampolicy command 88
- samsimulm command 90
- select string 93
- SQL syntax 93
- structured data types 94

### T
- trademarks 190

### U
- uninstallSAM command 92
- using select strings in expressions 93

### V
- variable names 96

### X
- XML elements
  - AutomationDomainName 103
  - AutomationPolicy 102
