Note!

Before using this information and the product it supports, be sure to read the general information under “Notices” on page v.

ISO 9001 Certification

This product was developed using an ISO 9001 certified quality system.

Certification has been awarded by Bureau Veritas Quality International (BVQI) (Certification No. BVQI - 92086/A).

BVQI is a world leader in quality certification and is currently recognized by more than 20 accreditation bodies.

Notices

References in this publication to Tivoli Systems or IBM products, programs, or services do not imply that they will be available in all countries in which Tivoli Systems or IBM operates. Any reference to these products, programs, or services is not intended to imply that only Tivoli Systems or IBM products, programs, or services can be used. Subject to Tivoli Systems’s or IBM’s valid intellectual property or other legally protectable right, any functionally equivalent product, program, or service can be used instead of the referenced product, program, or service. The evaluation and verification of operation in conjunction with other products, except those expressly designated by Tivoli Systems or IBM, are the responsibility of the user.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".

Tivoli Systems or IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing

1.0 Introduction

This Program Directory is intended for the system programmer responsible for program installation and maintenance. It contains information concerning the material and procedures associated with the installation of IBM Tivoli Decision Support for OS/390 Accounting Workstation Option. This publication refers to IBM Tivoli Decision Support for OS/390 Accounting Workstation Option as Accounting Workstation Option.

The Program Directory contains the following sections:

- 2.0, “Program Materials” on page 3 identifies the basic and optional program materials and documentation for Accounting Workstation Option.
- 3.0, “Program Support” on page 6 describes the IBM support available for Accounting Workstation Option.
- 4.0, “Program and Service Level Information” on page 8 lists the APARs (program level) and PTFs (service level) incorporated into Accounting Workstation Option.
- 5.0, “Installation Requirements and Considerations” on page 9 identifies the resources and all for installing and using Accounting Workstation Option.
- 6.0, “Installation Instructions” on page 15 provides detailed installation instructions for Accounting Workstation Option. It also describes the procedures for activating the functions of Accounting Workstation Option, or refers to appropriate publications.

Before installing Accounting Workstation Option, read the CBPDO Memo To Users and the CBPDO Memo To Users Extension that were supplied with this program softcopy as well as this Program Directory and then keep them for future reference. Section 3.2, “Preventive Service Planning” on page 6 tells you how to find any updates to the information and procedures in this Program Directory.

Accounting Workstation Option is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The Program Directory is provided softcopy on the CBPDO tape which is identical to the hard copy provided with your order. Your CBPDO contains a softcopy preventive service planning (PSP) upgrade for this product. All service and HOLDDATA for Accounting Workstation Option are included on the CBPDO tape.

Do not use this Program Directory if you are installing Accounting Workstation Option with a SystemPac or ServerPac. When using these offerings, use the jobs and documentation supplied with the offering. This documentation may point you to specific sections of the Program Directory as required.
1.1 Accounting Workstation Option Description

IBM Tivoli Decision Support for OS/390 Accounting Workstation Option is an IBM licensed program. It consists of a host component and a workstation component (delivered via a CD). The host component collects detailed system management data from all parts of your system, organizes it and stores it in a DB2 relational database to be then used for graphical and tabular reports on the host or to be then downloaded to the workstation for extensive financial analysis.

This program directory is intended for the system programmer responsible for program installation and maintenance of the host component. It contains information concerning the material and procedures associated with the installation of the Accounting Workstation Option. You should read all of this program directory before installing the program and then keep it for future reference.

This program directory should be used when installing the English language version of the Accounting Workstation Option. To install and use the Accounting Feature workstation component, please refer to Accounting Feature for the Workstation manual (SH19-4516-02) and related CD.

1.2 Accounting Workstation Option FMIDs

Accounting Workstation Option consists of the following FMIDs:

JLJ06A9
JLJ06L2
2.0 Program Materials

An IBM program is identified by a program number and a feature number. The program number for Accounting Workstation Option is 5698-IDW and its feature number is 5802.

Basic Machine-Readable Materials are materials that are supplied under the base license and feature code, and are required for the use of the product. Optional Machine-Readable Materials are orderable under separate feature codes, and are not required for the product to function.

The program announcement material describes the features supported by Accounting Workstation Option. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is magnetic tape or downloadable files. It is installed using SMP/E, and is in SMP/E RELFILE format. See 6.0, “Installation Instructions” on page 15 for more information about how to install the program.

Information about the physical tape for the Basic Machine-Readable Materials for Accounting Workstation Option can be found in the CBPDO Memo To Users Extension. Figure 1 describes the file content.

Figure 1 describes the program file content for Accounting Workstation Option. You can refer to the CBPDO Memo To Users Extension to see where the files reside on the tape.

Notes:

1. The data set attributes in this table should be used in the JCL of jobs reading the data sets, but since the data sets are in IEBCOPY unloaded format, their actual attributes may be different.

2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.

2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for Accounting Workstation Option.

2.3 Program Publications

The following sections identify the basic and optional publications for Accounting Workstation Option.

2.3.1 Basic Program Publications

Figure 2 identifies the basic unlicensed program publications for Accounting Workstation Option. One copy of Accounting Workstation Option Administration Guide, Accounting Workstation Option Guide to the Reporting Dialog and Accounting Workstation Option User's Guide for the Viewer is included when you order the basic materials for Accounting Workstation Option. For additional copies, contact your IBM representative.

The Accounting Workstation Option Program Directory, along with other Tivoli Program Directories can be found by following links to the product from the support web site listed below:

2.4 Program Source Materials

Customers with access to View Program Listings (VPL), such as through S/390 SoftwareXcel, can use the VPL facility for online viewing of available program listings. Those customers without access to VPL can contact their IBM representative.

2.5 Publications Useful During Installation

The publications listed in Figure 4 may be useful during the installation of Accounting Workstation Option. To order copies, contact your IBM representative or visit the IBM Publications Center on the world wide web at:

<table>
<thead>
<tr>

3.0 Program Support

This section describes the IBM support available for Accounting Workstation Option.

3.1 Program Services

Contact your IBM and/or Tivoli representative for specific information about available program services. You can find information in the "IBM Software Support Guide" at the following Web site: http://www-3.ibm.com/software/sysmgmt/products/support/.

The handbook provides information about how to contact Customer Support, depending on the severity of your problem, and the following information:

- Registration and eligibility
- Telephone numbers and e-mail addresses, depending on the country in which you are located
- What information you should gather before contact support

3.2 Preventive Service Planning

Before installing Accounting Workstation Option, you should review the current Preventive Service Planning (PSP) information. If you obtained Accounting Workstation Option as part of a CBPDO, there is HOLDDATA and PSP information included on the CBPDO.

If the CBPDO for Accounting Workstation Option is more than two weeks old when you install it, you should contact the IBM Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".

For access to RETAIN, visit http://www.ibm.com/ on the Internet.

PSP Buckets are identified by UPGRADEs, which specify product levels, and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for Accounting Workstation Option are:

<table>
<thead>
<tr>
<th>UPGRADE</th>
<th>SUBSET</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TDS/390</td>
<td>JLJ06A9</td>
<td>Accounting Feature for the Host</td>
</tr>
<tr>
<td>TDS/390</td>
<td>JLJ06L2</td>
<td>Accounting Feature for the Host (English)</td>
</tr>
</tbody>
</table>
3.3 Statement of Support Procedures

Report any difficulties you have using this program to your IBM Support Center. If an APAR is required, the Support Center will provide the address to which any needed documentation can be sent.

Figure 6 on page 7 identifies the component IDs (COMPID) for Accounting Workstation Option.

<table>
<thead>
<tr>

<td>Accounting Feature for the Host (English)</td>
<td>6L2</td>
</tr>
</tbody>
</table>
4.0 Program and Service Level Information

This section identifies the program and any relevant service levels of Accounting Workstation Option. The program level refers to the APAR fixes incorporated into the program. The service level refers to the PTFs integrated.

4.1 Program Level Information

The following APAR fixes against previous releases of Accounting Workstation Option have been incorporated into this release. They are listed by FMID.

- FMID JLJ06A9
  NONE

- FMID JLJ06L2
  NONE

4.2 Service Level Information

No PTFs against this release of Accounting Workstation Option have been incorporated into the product tape.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating Accounting Workstation Option. The following terminology is used:

- **Driving system**: the system used to install the program.
- **Target system**: the system on which the program is installed.

In many cases, the same system can be used as both a driving system and a target system. However, you may want to set up a clone of your system to use as a target system by making a separate IPL-able copy of the running system. The clone should include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Some cases where two systems should be used include the following:

- When installing a new level of a product that is already installed, the new product will delete the old one. By installing onto a separate target system, you can test the new product while still keeping the old one in production.
- When installing a product that shares libraries or load modules with other products, the installation can disrupt the other products. Installing onto a test system or clone will allow you to assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install Accounting Workstation Option.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements

<table>
<thead>
<tr>
<th>Program Number</th>
<th>Product Name and Minimum VRM/Service Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>5647-A01</td>
<td>OS/390 SMP/E Version 2 Release 6 with PTF UR51068</td>

</tr>
<tr>
<td>5694-A01</td>
<td>z/OS Version 1 Release 1</td>
</tr>
</tbody>
</table>
5.2 Target System Requirements

This section describes the environment of the target system required to install and use Accounting Workstation Option.

Accounting Workstation Option installs in the z/OS (Z038) SREL.

5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements

5.2.2.1 Mandatory Requisites

A mandatory requisite is defined as a product that is required without exception; this product either will not install or will not function unless this requisite is met. This includes products that are specified as REqs or PREs.

<table>
<thead>
<tr>
<th>Program Number</th>
<th>Product Name and Minimum VRM/Service Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>5647-A01</td>
<td>OS/390 V2.10 w JES2 or JES3</td>
</tr>
<tr>
<td>5694-A01</td>
<td>z/OS 1.1</td>
</tr>
<tr>
<td>5698-ID9</td>
<td>TIVOLI Decision Support for OS/390 R6 base function</td>
</tr>
</tbody>
</table>

5.2.2.2 Functional Requisites

A functional requisite is defined as a product that is not required for the successful installation of this product or for the basic function of the product, but is needed at run time for a specific function of this product to work. This includes products that are specified as IF REqs.
5.2.2.3 Toleration/Coexistence Requisites

A toleration/coexistence requisite is defined as a product which must be present on a sharing system. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD at different time intervals.

5.2.2.4 Incompatibility (Negative) Requisites

A negative requisite identifies products which must not be installed on the same system as this product.

The Accounting Workstation Option has no negative requisites.

5.2.3 DASD Storage Requirements

Accounting Workstation Option libraries can reside on all supported DASD types.

Figure 10 lists the total space required for each type of library.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>10 tracks</td>
</tr>
<tr>
<td>Distribution</td>
<td>10 tracks</td>
</tr>
</tbody>
</table>

Notes:
1. IBM and Tivoli recommend use of system determined block sizes for efficient DASD utilization for all non-RECFM U data sets. For RECFM U data sets, IBM recommends a block size of 32760, which is the most efficient from a performance and DASD utilization perspective.

2. Abbreviations used for the data set type are:

   - **U**: Unique data set, allocated by this product and used only by this product. To determine the correct storage needed for this data set, this table provides all required information; no other tables (or Program Directories) need to be referenced for the data set size.
   - **S**: Shared data set, allocated by this product and used by this product and others. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other Program Directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.
   - **E**: Existing shared data set, used by this product and others. This data set is NOT allocated by this product. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other program directories). This existing data set must have enough free space to accommodate the storage size given in this table.

   If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old one and reclaim the space used by the old release and any service that had been installed. You can determine whether or not these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

   For more information on the names and sizes of the required data sets, please refer to -- Heading 'ALLOC' unknown --.

3. Abbreviations used for the HFS Path type are:

   - **N**: New path, created by this product.
   - **X**: Path created by this product, but may already exist from a previous release.
   - **P**: Previously existing path, created by another product.

4. All target and distribution libraries listed have the following attributes:

   - The default name of the data set may be changed
   - The default block size of the data set may be changed
   - The data set may be merged with another data set that has equivalent characteristics
   - The data set may be either a PDS or a PDSE

5. All target libraries listed have the following attributes:

   - The data set may be SMS managed
   - It is not required for the data set to be SMS managed
   - It is not required for the data set to reside on the IPL volume
   - The values in the "Member Type" column are not necessarily the actual SMP/E element types identified in the SMPMCS.

6. All target libraries listed which contain load modules have the following attributes:

   - The data set may be in the LPA
- It is not required for the data set to be in the LPA
- The data set may be in the LNKLST
- It is not required for the data set to be APF authorized

The following figures describe the target and distribution libraries required to install Accounting Workstation Option. The storage requirements of Accounting Workstation Option must be added to the storage required by other programs having data in the same library or path.

Note: The data in these tables should be used when determining which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

Figure 13 (Page 2 of 2). Storage Requirements for Accounting Workstation Option Non-SMP/E Data Sets
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of Accounting Workstation Option.

Please note the following:

- If you want to install Accounting Workstation Option into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets. Additionally, to assist you in doing this, IBM has provided samples to help you create an SMP/E environment at the following url:
  http://www-1.ibm.com/support/docview.wss?rs=660&context=SSZJDU&uid=swg21066230
- Sample jobs have been provided to help perform some or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries required for SMP/E execution have been defined in the appropriate zones.
- The SMP/E dialogs may be used instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing Accounting Workstation Option

6.1.1 SMP/E Considerations for Installing Accounting Workstation Option

This release of Accounting Workstation Option is installed using the SMP/E RECEIVE, APPLY, and ACCEPT commands. The SMP/E dialogs may be used to accomplish the SMP/E installation steps.

The Accounting Workstation Option uses the same SMP/E data sets and some of the target and distribution libraries used by the TIVOLI Decision Support for OS/390 R6 base function (5698-ID9).

Ensure that TIVOLI Decision Support for OS/390 R6 base function has been APPLIED before installing the Accounting Workstation Option.

6.1.2 SMP/E Options Subentry Values

The recommended values for some SMP/E CSI subentries are shown in Figure 14. Use of values lower than these may result in failures in the installation process. DSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. Refer to the SMP/E manuals for instructions on updating the global zone.
6.1.3 SMP/E CALLLIBS Processing

The Accounting Workstation Option does not use any CALLLIBS function.

6.1.4 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install Accounting Workstation Option:

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Job Type</th>
<th>Description</th>
<th>RELFILE</th>
</tr>
</thead>
<tbody>
<tr>
<td>DRLJARCE</td>
<td>RECEIVE</td>
<td>Sample RECEIVE job</td>
<td>IBM.JLJ06B2.F1</td>
</tr>
<tr>
<td>DRLJAAPE</td>
<td>APPLY</td>
<td>Sample APPLY job</td>
<td>IBM.JLJ06B2.F1</td>
</tr>
<tr>
<td>DRLJAACE</td>
<td>ACCEPT</td>
<td>Sample ACCEPT job</td>
<td>IBM.JLJ06B2.F1</td>
</tr>
</tbody>
</table>

Note:

The ALLOCATE and DDDEF jobs were run at TIVOLI Decision Support for OS/390 (5698-ID9) installation time.
Only the RECEIVE, APPLY and ACCEPT jobs have to be run for the Accounting Workstation Option installation.

The RECEIVE, APPLY and ACCEPT jobs were unloaded at TIVOLI Decision Support for OS/390 (5698-ID9) installation time. You can find them in the SDRLCNTL Target library, so you do not need to download any SMP/E sample from the media shipped with the Accounting Workstation Option.
